Advertenties

PA0OB (1)

Cees biedt aan gratis een PC Moederboard type 286 compleet met geheugen = (30 Mb), een keyboard voor inbouw (nieuw) voor PC. Een en ander is = gratis af te halen na telefonische afspraak.

Tel: 013-4672838=20

PD1AGO (1)

Biedt aan een Pentium 200 PC, met 36 speed CD-ROM, 2,5 GB harddisk, 32 = MB EDO RAM geheugen. Miditower uitvoering,compleet met muis en = toetsenbord, echter zonder monitor.

Tel: 013-5711967

PE1ITY (1)

Zoekt een schema voor een Minerva kleuren TV, type MT5515. Het = binnenwerk van de KTV is van makelij Philips, dus het vervangend schema = voor het chasis is ook prima. Verder zoekt hij het nieuwe adres en = telefoonnummer van het bedrijf Binell in Nijverdal, gespecialiseerd in = schema's en documentaties van allerlei TV's en videos.

Tel: 013-4557150

PA3CLG (0)

Is op zoek naar een adres waar men nog de powermodule kan krijgen van de = Standard C156E 2 meter portofoon, Mitsibusti M67798 LAM. Toon heeft = reeds verschillende adressen geprobeerd, echter niemand kan hem aan deze = module helpen.

Tel: 013-5181978

PE1NLZ (0)

De vader van Andre heeft vanwege verbouwing een hele hoop Radio en TV = onderdelen uit de jaren 40, 50 en 60 overcompleet. Verzamelaars kunnen = contact opnemen met Andre, en bij de opruiming zal Andre bekijken of er = iets interessants voor deze persoon tussen zit.

Tel: 013-5702697 of email: pe1nlz@hetnet.nl=20

Korte Berichten

Zonne-energie wordt veel goedkoper

Aan de universiteit van Florida is men druk bezig met het ontwikkelen = van dunne-film zonnecellen. Ze zijn 100 maal dunner dan de huidige = zonnecellen die uit silicium vervaardigd zijn. Silicium dat uit proper = zand gewonen wordt. De nieuwe zonnecellen zijn tussen de 2 en de 3 = micron dik. Ter vergelijking: een mensenhaar is 70 micron dik. De = dunne-film zonnecellen kan worden op glas aangebracht. Het rendement is = 15 %, dus 100 watt zonne-energie wordt omgezet in 15 watt elektrische = energie. Het zal wel nog meerdere jaren duren eer die cellen commercieel = uitgebracht worden. Maar de vraag naar zonnecellen neemt alvast niet af, = maar groeit jaarlijks met 20%.=20

M5-prefixen weldra in de lucht

Zoals ik vorige weekr reeds meldde, zijn er grote veranderingen op komst = in Engeland: over enkele weken zullen de nieuwe A/B licenties van kracht = zijn. De bedoeling is de interesse voor het radio-amateurisme aan te = vijzelen. De A/B licentie call is M5xxx en die horen we dus binnenkort. = Deze A/B licentie geeft toegang tot ALLE amateur banden en krijgt men na = een theoretisch examen en een 5 wpm morse test. Het vermogen dat de = M5-licentie houders mogen gebruiken is 100 watt op de HF banden en 400 = watt daarboven. De nieuwe regeling in Engeland moet het radioamateurisme = aantrekkelijker maken.

Lokaal Nieuws

Cursus nieuws

De regio Tilburg kent 2 kwalitatief zeer goede cursusen die opleiden = voor de N/C licentie.=20

De VRZA afdeling Hart van Brabant start na de vakanties met een nieuwe = N/C curus, deze cursus vindt op een door de weekse dag plaats in het = scoutinggebouw van de Rey de Carle scoutinggroep gelegen aan de = sportvelden aan de Heerenveldeweg in de wijk Reeshof. Voor meer = informatie kunt u contact opnemen met Michel Elissen, PA3DGW, tel: = 013-4673734 of per E-mail: pa3dgw@vrza.org.

Joop, PA3HIM, start medio november namens de VERON afdeling Tilburg met = een N/C cursus die een jaar zal gaan duren. De cursus vindt elke dinsdag = plaats van 19.30-21.30 uur in wijkcentrum =91t Zand, Beneluxlaan 74 te = Tilburg. Joop gelooft in een zeer persoonlijke aanpak, en zal daarom = niet meer dan 8 cursisten per keer aannemen. Op dit moment zijn er al 6 = kandidaten, dus er zijn nog 2 beschikbaar. Geintereseerden kunnen Joop = bellen op tel: 0416-337261.

Morsecursus, indien er genoeg belangstelling is zal Michel, PA3DGW ook = dit najaar een cursus opstarten. Echter op dit moment zijn er 3 = aanmeldingen en is het opstarten niet interesant. Mocht u ook = belangstelling hebben voor de morsecursus, aarzel u dan niet om op te = geven, Michel Elissen, PA3DGW tel: 013-4673734 of E-mail: =

pa3dgw@vrza.org.

Afdelingsbijeenkomsten in de regio

Kempische Amateur Radio Club

Vanmiddag de heropening van cultureel centrum " den herd " in Bladel, de =
KAR is aanwezig op de open dag van 13 tot 17 uur met een infostand om de =
Bladelse bevolking te informeren over onze hobby. De bijeenkomsten van =
de KAR vinden elke tweede donderdag van de maand plaats in Cultureel =
Centrum d=92n Herd, aanvang 20.15 uur. De volgende bijeenkomst is op =
donderdag 9 september. Elke zondagavond om 19.30 uur is de Kempische =
ronde met de call PI4KAR op 145,575 MHz. Verder informatie over de KAR =
kunt u vinden op internet, het adres van de homepage is: =
http://www.qsl.net/pi4kar/. Voor verdere informatie kunt u terecht bij =
de secretaris, Bert Plaum, PA3ENH, Stijn Streuvelslaan 6, 5531VB Bladel, =
tel: 0497-387083. Via packet: PI4KAR@PI8ZAA of via E-mail: =
bplaum@iaehv.nl.

VRZA afdeling Hart van Brabant

De bijeenkomsten van de VRZA afdeling Hart van Brabant vinden elke =
eerste donderdag van de maand plaats in het scoutinggebouw van de Rey de =
Carle scoutinggroep gelegen aan de sportvelden aan de Heerenveldeweg in =
de wijk Reeshof, aanvang 20.00 uur. De eerst komende verenigingsavond is =
op donderdag 7 oktober. Elke tweede en vierde woensdag van de maand is =
er een ronde om 20.30 uur =91s avonds op 145,400 MHz onder de call =
PI4HBV. Meer informatie over de VRZA afdeling Hart van Brabant kunt u =
terugvinden op internet, de homepage is: =
http://home.worldonline.nl/~pe1orz/pi4hvb.html. Informatie of vragen =
kunt opvragen of stellen aan Michel Elissen, PA3DGW tel: 013-4673734. U =
kunt ook contact opnemen via packet: PI4HVB@PI8HWB of via E-mail: =
pa3dgw@vrza.org.

VERON afdeling Tilburg

De VERON afdeling Tilburg houdt elke tweede dinsdag van de maand zijn =
afdelingsbijeenkomsten in wijkcentrum =91t Zand, Beneluxlaan 74 te =
Tilburg (in het zelfde gebouw als de openbare bibliotheek). De =
bijeenkomsten beginnen op 20.00 uur en zijn voor iedereen vrij =
toegankelijk, lid of geen lid van de VERON. De volgende verenigingsavond =
is gepland voor dinsdag 14 september, op deze avond is niet bijzonders =
gepland, en deze avond staat dan ook in het teken van bijpraten na de =
vakantie. Voor verdere informatie over de VERON afdeling Tilburg, kunt u =
onze internet pagina raadplegen, u kunt daar komen door op internet de =
VERON homepage te raadplegen, http://www.veron.nl/amrad, als u afdeling =
aanklikt en uw klikt daarna afdeling Tilburg aan komt u vanzelf op de =
homepage terecht. U kunt ook rechtstreeks het volgende adres intikken: =
http://home.worldonline.nl/~pe1orz/pi4til.html. Vragen over de VERON =
afdeling Tilburg of informatie opvragen kunt u stellen via packet =
PI4TIL@PI8SHB of via E-mail pa3dzm@amsat.org. Uiteraard kunt u ook =
telefonisch contact zoeken, tel: 06-53616482 . Wilt u per post =
informatie aanvragen dan moet u dat sturen ter attentie van: PA3DZM, =

Eric van den Bergh, Europalaan 50, 5042 ZT Tilburg.

Contest nieuws

VHF en hoger contestnieuws

Scandinavian activity 144 MHz

Dinsdag 7 september van 18.00-22.00 UTC.=20

IARU ATV contest 432 en hoger=20

Donderdag 9 september 18.00-22.00 UTC.=20

HF contesten

European DX-Contest SSB

De contest begint op zaterdag 11 september om 00.00 UTC en duurt 48 uur = tot en met zondag 12 september 24.00 UTC. Het doel van de contest is het = werken met stations buiten Europa op 80, 40, 20, 15 en 10 meter in de = mode SSB. Klasse van deelname: Single Operator, Multi Operator Single = Transmitter en SWL klasse. Het gebruik van DX spotting netten is = toegestaan. De 10 minuten regeling is van toepassing. Voor Single = Operators mogen maar 36 uur van de 48 uur actief zijn. De rustpauze mag = in een periode of maximaal 3 perioden van 4 uur genomen worden. De = rustperiodes moeten op het summary sheet vermeld worden. Uitwisselen een = RS rapport. een volgnummer. Een station mag maar eenmaal per bande = gewerkt worden. Multipliers de landen van de DXCC en WAE lijst, buiten = Europa. De multipliers op 80 meter mogen met factor 4 vermenigvuldigd = worden, op 40 meter met factor 3, en op 20, 15 en 10 meter met de factor = 2. Men kan aanvullende punten scoren met QTC verkeer. Een QTC kan door = een station buiten Europa verzonden worden, waarin de tijd, call en = volgnummer vermeldt wordt b.v. 1307/DA1AA/431. Een maximum van 10 = QTC=92s mogen naar hetzelfde station verzonden worden. De QTC=92s moeten = op een apart blad vermeld worden, met een vermelding van het station die = de QTC verzond en op welke band. Score: totaal aantal QSO=92s + QTC=92s = maal het aantal multipliers van alle banden. Logs insturen via E-mail = naar waedc@darc.de. Op de DARC homepage http://www.darc.de/referate/dx/ = kan men meer contest logging details terugvinden. Logs insturen voor 15 = oktober naar: WAEDC Contest Committee, Duererring 7, P O Box 1126, = D-74370 SERSHEIM, GERMANY

North American Sprint Contest SSB=20

Zondag 12 september van 00.00 tot en met 04.00 UTC. Het is de bedoeling = om zo veel mogelijk stations in Noord-Amerika te werken. Banden 80 en 20 = meter. De gesuggereerde frequentie is CW zijn 3580, en 14275 kHz. Men = mag een station een keer per band werken. Uitwisselen: De call van het = tegenstation, je eigen call, volgnummer, je naam en je DXCC land. Score: = per QSO 1 punt. De multipliers zijn de staten van de USA en de Canadese = provincies. Na het QSO, behoudt het aanroepend station de frequentie en =

gaat het CQ roepend station minimaal 5 kHz QSY. Logs insturen naar Rick = Niswander, P.O. Box 2701, Greenville, NC 27836, USA. Of via E-mail = niswanderf@mail.ecu.edu.

DX nieuws=20

Europa=20

eigen calls.

F-Frankrijk

Paul, F6CXV is vanaf vandaag tot en met 24 september op vakantie op het = eiland Croix, EU-048. Tussen 10 en 23 september zal hij waarschijnlijk = actief zijn met de call TM0G. QSL via zijn eigen call.

SV5-Dodecanese eilanden

Vanaf komende dinsdag 7 september tot en met 15 september zullen 6 = Griekse amateurs actief zijn met de call SW5AI vanaf het eiland = Agathonisi, EU-001. De activiteiten vinden plaats op 160-6 meter in CW, = SSB en RTTY. Men zal rondom de klok 24 uur per etmaal actief zijn. QSL = via SV8DTL.

Afrika

3X-Guinea

Karel, ON4QY zal de komende paar jaren actief zijn als 3XY2A vanuit = Conakry. Hij is regelmatig gesignaleerd op 21275 kHz tussen 16.30 en = 19.30 uur UTC. QSL via zijn eigen call.=20

EA8-De Canarische eilanden

Jeff, G4ELZ, is tot en met 18 september actief als EA8/G4ELZ/p vanuit = Puerto de la Cruz. Hij zal voornamelijk op 20 meter in CW actief zijn. = QSL via zijn eigen call.

TU-Ivoorkust

Laurent, F4ATM zal vanaf komende dinsdag 7 september tot en met 17 = september actief zijn als TU2/F4ATM. Hij zal gebruik maken van een = Kenwood TS-850 en een 14AVQ verticale antenne. QSL via zijn eigen call.=20

V5-Namibie

Zoals ik vorig week al vermeld heb in dit bulletin, is Charlie W0YG met = een reis door Afrika bezig. Vanaf morgen is hij actief als V5/ZS6YG. Hij = zal tot 20 september in Namibie blijven. De activiteiten zullen in het = onderste deel van het CW gedeelte van 30 tot en met 10 meter plaats = vinden. QSL via zijn eigen call.

Azie

5B-Cyprus

Steve, G3VMW and Bob, G3ZEM zijn tot en met 9 september actief als = 5B4/G3VMW en 5B4/G3ZEM vanaf Cyprus, AS-004. De plannen zijn om de = nadruk te leggen op 12, 17 en 30 meter. QSL via de eigen calls.

9M2-West Maleisie

Mirek, 9V1XE zal vanaf morgen tot en met 9 september actief zijn als = 9M8DX/2. Hij is actief vanaf het eiland Tioman, AS-046. QSL via de eigen = call.

BY-China

Ed, BD4ED/4 die op dit moment op een eiland verblijft in die als IOTA = referentie AS-136 heeft is dagelijks actief op 30 meter tussen 20.00 en = 22.00 UTC. 9 Chinese zendamateurs zijn vanaf 8 september 5 dagen actief = als BI7Y vanaf het eiland Yangxing en de archipel Xisha onderdeel van de = Paracel eilanden (Nog geen IOTA referentie). Men zal met 2 stations, een = beam en een amplifier actief zijn op 40-10 meter. Het heeft de leider = van de DX-peditie een jaar gekost om het nodige papierwerk rond te = krijgen. QSL via BA7JA.

HS-Thailand

Don, G3VFU is op dit moment in Thailand en actief op alle HF banden als = HS0/G3VFU. Don is alleen actief in SSB. QSL via W3HNK.

YI-Irak

YI1EE, YI1SEA of YI1DX zijn vaak actief op 21234 kHz tussen 09.30-12.00 = UTC.=20

Oceanie

FO-Frans Polynesi=EB=20

Patrick, FO5QS, leeft op dit moment op het eiland Huahine (OC-067). De = komende paar maanden is hij bijna dagelijks in de lucht tussen 14120 en = 14150 kHz tussen 05.00-08.00 UTC. Zijn nieuwe QSL adres is: Patrick = Freys, Box 643, F-98731 Fare, Huahine, French Polynesia. Jose, FO5QG is = dagelijks actief op 20 meter voor 06.00 UTC. QSL via XE1L. Marcel, ON4QM = is tot en met eind november als FO0DEH actief . Hij is actief met 100 = Watt en een vertical. Hij zal onder andere actief zijn vanaf Raivavae = (OC-114), de Austral eilandengroep, en andere IOTA eilandengroepen in = deze omgeving. QSL via de eigen call.

KH8-Amerikaans Samoa

Vanaf komende dinsdag 7 september tot en met 17 september zijn SM6CAS en = G4EDG actief als KH8/SM6CAS in SSB, en KH8/G4EDG in CW vanaf Pago Pago, = OC-045. Op 17 september vertrekken ze naar het eiland Kanton in Centraal =

Kiribati. Meer informatie over deze DX-peditie is terug te vinden op de = Double Trouble DX-peditie website: http://www.qsl.net/t31t/. QSL via = LA7MFA.=20

Pacific reis

Ron, ZL1AMO zal op 8 september Nieuw Zeeland verlaten en vervolgens = verschillende eilanden in de Pacific aandoen. De plannen zijn om 1 week = actief te zijn als 3D2RW vanaf Fiji, 1 week actief te zijn als 5W1CW = vanaf West Samoa, en 4 weken vanaf ZK3, Tokelau (rond 24, 25 september).

Antarctica

Oleg is R1ANF tot en met 8 september actief als /A vanaf de Chinese = basis "Great Wall" op het eiland King George, AN-010 . QSL via RK1PWA.

Speciale calls

4X2J

Dit speciale station is tot en met 3 oktober elke dinsdag en zaterdag = actief vanuit het Bloomfield Science Mueseum in Jeruzalem. QSL via het = bureau.

5A30

Dit speciale station is tot en met 7 september actief vanwege het 30 = jarig jubileum van de Libische revolutie. QSL via K1WY.

9A2000B

6 Kroatische amateurs zullen tot en met 8 september actief zijn met deze = call vanaf de Brijuni/Brioni eilanden (EU-110). Oorspronkelijk zou men = uitkomen met de call 9A2000FT zoals vorige week in dit bulletin bericht, = maar de authoriteiten hebben de call gewijzigd. QSL via 9A7K.

UE0JX

Deze speciale call is tot en met 30 november actief in het kader van het = 120 jarig bestaan van Zeya City. QSL alleen DIRECT via RA0JX: Vladimir = I. Babynin, P.O.Box 1, Zeya-3, Amurskaya Obl.676200, Russia.=20

Speciale Poolse Calls

De Poolse kortgolf operators vereniging in Gdansk kondigt aan dat in het = teken van het 60 jarig jubileum van de verdediging van de Poolse kust, = er een aantal speciale stations actief zullen zijn. Deze stations zijn = actief tot en met 2 oktober. De volgende stations zijn actief 3Z60H = vanaf het Hel schiereiland, QSL via SP2FJN. 3Z60O vanuit Oksywie, QSL = via SP2HJN. 3Z60P vanuit het Museum van de Poolse Post in Gdansk. QSL = Manager SP2AYC. 3Z60W vanuit Westerplatte QSL Manager SP2BNJ. 3Z0BLY = vanuit het Destroyer Museum "ORP Blyskawica" QSL Manager SP2PMW. 3Z0MDL = vanuit het het Naval Aquadron in Puck, QSL Manager SP2UUU.=20

6 meter nieuws

Albanie: Dave, ZA/N7BHC heeft zijn eerste QSO op 6 meter gemaakt. Het = QSO was met ZS6PJS. Dave maakte gebruik van 100 Watt uitgangsvermogen en = een verticale whip antenne gemonteerd op het balkon van zijn hotelkamer = op de 5de verdieping. Dave zal in de loop van deze week verhuizen naar = een huis, en hoopt dan een 5 elements yagi te kunnen plaatsen. De = locator van Dave is JN91.

Argentinie: Jorge, LU7XP is actief vanaf het eiland Tierra del Fuego, = SA-008. Het westelijk deel van dit eiland behoort toe aan Chili, en het = oostelijk deel aan Argentinie. Jorge is actief vanuit het locatorvak = FD55UE en is zeer actief op 6 meter. QSL via P.O.Box 110, Ushuaia, 9410, = Tierra del Fuego island, Argentina.

Armenie: Eugeni, EK6AD is actief vanuit het locatorvak LN21JR. Hij is = vrij veel te vinden op 6 meter wanneer er grote openingen zijn. QSL via = Eugeni I. Kurgin - Tamantsineri Street 18, Apt. 56 - Yerevan 375106 - = Armenia.

Japan: Japan kent reeds enkele jaren machtigingen voor 6 meter. Echter = de vermogenbeperking was 50 Watt. Sinds de laatste cyclus is dit = vermogen opgeschroefd naar 100 Watt en 500 Watt. Sinds kort zijn er ook = vergunningen te verkrijgen voor een vermogen van 1 kilowatt op 6 meter. = Op dit moment zijn er al 20 tot 30 stations actief met zo een 1 kW = vergunning.=20

Jordanie: Koji, JH7FQK is momenteel actief als JY9NX. Hij heeft in = augustus zijn eerste 6 meter contact gemaakt met Europa, IT9IPQ. Koji is = razend enthousiast over 6 meter en zal zeer zeker vaker actief zijn. QSL = via zijn eigen call. Pete, N3FNE is actief als JY9NE met een Alinco = DX-70TH en een dipool. Pete is niet al te vaak actief op 6 meter daar = hij met zijn bescheiden station niet door de QRM heen komt op 50110 kHz = als er grote openingen zijn. QSL via zijn eigen call .=20

Kazakstan: Valery, UN3G is vaak actief op 6 meter vanuit het vak MN83KF. = QSL via DL4BBU.

Taiwan: Richard, BV2DP is sinds mei 1991 actief op 6 meter vanuit het = locatorvak PL05. Hij heeft de beschikking over 100 Watt = uitgangsvermogen, en een 6 elements HB9CV en een verticale antenne voor = 6 meter. QSL via P.O.Box 32-144 Taipei Taiwan. R.O.C.

Turkije: Omari, 4L5O is actief vanuit het vak LN21JR. QSL via TA7A.

Verenigde Arabische Emiraten: Almurr, A61AH is actief vanuit het vak = LL75. Hij maakt gebruik van een Icom IC706 en een 4 elements Yagi. QSL = via P.O.Box 4800, Dubai, United Arab Emirates.=20

AGENDA

Zaterdag 11 september, organiseert de VERON afdeling Helmond voor de =

15de maal een radiomarkt in verenigingsgebouw =91t Abdijke, Abdijlaan 2, = te Helmond. De zaal is geopend voor publiek van 09.00-14.30 uur. = Toegangsprijs is fl 4,--. Er is een inpraatstation actief met de call = PI4HMD op 145,400 MHz.

Zondag 12 september de jaarlijkse HOBBYSCOOP ballonenvossenjacht.

Zaterdag en zondag 18 en 19 september wordt de UKW tagung gehouden in de = Mannheimer Maimarkthalle te Weinheim, Duitsland.=20

Zondag 19 September 1999 organiseert de UBA sectie Noord Oost Limburg = een eerste uitgave van de hambeurs " HAMRADIO EVENT '99 "'. Het wordt = een radiomarkt met zowel nieuwe - als 2de handstoestellen en onderdelen. = Daarnaast is er een gezellig cafetaria voorzien om een drankje te = nuttigen of een broodje of een stuk taart te eten. De hambeurs wordt = gehouden in 't Parochiehuis te Bocholt Belgie op het Kerkplein. Bocholt = is een gemeente in het Noordoosten van Belgisch Limburg, vlak tegen de = Nederlandse grens. De zaal is toegankelijk voor publiek van 10.00 uur = tot en met 18.00 uur.=20

Zaterdag 25 september 1999 is er voor de 18de maal de = Radio-onderdelen-markt, Antennemeetdag en Amateurtreffen van de VERON = afd. Meppel, georganiseerd door de stichting R.O.M. Dit evenement zal, = als altijd, worden gehouden bij wegrestaurant 'De Lichtmis' gelegen aan = de A-28 tussen Zwolle en Meppel, afslag Nieuwleusen-Hasselt.

Vrijdag 1 tot en met donderdag 7 oktober wordt de Firato '98, de grote = consumentenelektronicabeurs, in de RAI te Amsterdam gehouden.

Zondag 3 oktober, organiseert de UBA sectie La Louviere een amateur en = informatica beurs in de Expo hallen te La Louviere, Belgi=EB.

Zondag 10 oktober de open dag van de Benelux DX Club, gehouden in het = dorpshuis te Badhoevedorp.=20

Zaterdag 16 en zondag 17 oktober, Jamboree On The Air.

Zaterdag 23 oktober, de Dag van de Amateur, gehouden in de America hal = te Apeldoorn.

Zondag 31 oktober, organiseert de Radio Amateur club drie provincien = punt RACDPP een grote hambeurs "RAGETO" genaamd. Deze beurs vind plaats = in Tessenderlo in het Technish Heilig hart Instituut, Heilig Hartlaan 16 = 3980 Tessenderlo Belgi=EB. De beurs is open van 9 tot 17 uur. Het = inpraatstation ON4DPP is QRV op 144,5125 MHz. Naast een boeiende ham- en = computerbeurs met talrijke deelnemers uit binnen en buitenland is er ook = de mogelijkheid een hapje en een drankje te nuttigen.

Woensdag 3 november, de examens radiotechniek en voorschriften deel I en = II, gehouden in de Badmingtonhal te Nieuwegein.

Zaterdag 6 november de Radiomarkt gehouden in de VEONN-remise te=20

Assen.=20

Zondag 7 november, organiseert de UBA sectie Torhout een hambeurs te =
Zedelgem Belgi=EB.

<P>Zonne-energie wordt veel goedkoper</P></B>
<P>Aan de universiteit van Florida is men druk bezig met het ontwikkelen =

van=20
dunne-film zonnecellen. Ze zijn 100 maal dunner dan de huidige =
zonnecellen die=20
uit silicium vervaardigd zijn. Silicium dat uit proper zand gewonen =
wordt. De=20
nieuwe zonnecellen zijn tussen de 2 en de 3 micron dik. Ter =
vergelijking: een=20
mensenhaar is 70 micron dik. De dunne-film zonnecellen kan worden op =
glas=20
aangebracht. Het rendement is 15 %, dus 100 watt zonne-energie wordt =
omgezet in=20
15 watt elektrische energie. Het zal wel nog meerdere jaren duren eer =
die cellen=20
commercieel uitgebracht worden. Maar de vraag naar zonnecellen neemt =
alvast niet=20
af, maar groeit jaarlijks met 20%. </P><B>
<P>M5-prefixen weldra in de lucht</P></B>
<P>Zoals ik vorige weekr reeds meldde, zijn er grote veranderingen op =
komst in=20
Engeland: over enkele weken zullen de nieuwe A/B licenties van kracht =
zijn. De=20
bedoeling is de interesse voor het radio-amateurisme aan te vijzelen. De =
A/B=20
licentie call is M5xxx en die horen we dus binnenkort. Deze A/B licentie =
geeft=20
toegang tot ALLE amateur banden en krijgt men na een theoretisch examen =
en een 5=20
wpm morse test. Het vermogen dat de M5-licentie houders mogen gebruiken =
is 100=20
watt op de HF banden en 400 watt daarboven. De nieuwe regeling in =
Engeland moet=20
het radioamateurisme aantrekkelijker maken.</P><B>

<P>European DX-Contest SSB</P></B>
<P>De contest begint op zaterdag 11 september om 00.00 UTC en duurt 48 =
uur tot=20
en met zondag 12 september 24.00 UTC. Het doel van de contest is het =
werken met=20
stations buiten Europa op 80, 40, 20, 15 en 10 meter in de mode SSB. =
Klasse van=20
deelname: Single Operator, Multi Operator Single Transmitter en SWL =
klasse. Het=20
gebruik van DX spotting netten is toegestaan. De 10 minuten regeling is =
van=20
toepassing. Voor Single Operators mogen maar 36 uur van de 48 uur actief =
zijn.=20
De rustpauze mag in een periode of maximaal 3 perioden van 4 uur genomen =
worden.=20
De rustperiodes moeten op het summary sheet vermeld worden. Uitwisselen =
een RS=20
rapport. een volgnummer. Een station mag maar eenmaal per bande gewerkt =
worden.=20
Multipliers de landen van de DXCC en WAE lijst, buiten Europa. De =
multipliers op=20
80 meter mogen met factor 4 vermenigvuldigd worden, op 40 meter met =
factor 3, en=20
op 20, 15 en 10 meter met de factor 2. Men kan aanvullende punten scoren =
met QTC=20
verkeer. Een QTC kan door een station buiten Europa verzonden worden, =
waarin de=20
tijd, call en volgnummer vermeldt wordt b.v. 1307/DA1AA/431. Een maximum =
van 10=20
QTC’s mogen naar hetzelfde station verzonden worden. De =
QTC’s moeten=20
op een apart blad vermeld worden, met een vermelding van het station die =
de QTC=20
verzond en op welke band. Score: totaal aantal QSO’s + QTC’s =
maal=20
het aantal multipliers van alle banden. Logs insturen via E-mail naar <A =

</P>
<P><U><FONT color=3D#000080>6 meter nieuws</FONT></U></P></B><B>
<P>Albanie</B>: Dave, <B>ZA/N7BHC</B> heeft zijn eerste QSO op 6 meter =
gemaakt.=20
Het QSO was met ZS6PJS. Dave maakte gebruik van 100 Watt =
uitgangsvermogen en een=20
verticale whip antenne gemonteerd op het balkon van zijn hotelkamer op =
de 5de=20
verdieping. Dave zal in de loop van deze week verhuizen naar een huis, =
en hoopt=20
dan een 5 elements yagi te kunnen plaatsen. De locator van Dave is =
<B>JN91.</P>
<P>Argentinie</B>: Jorge, <B>LU7XP</B> is actief vanaf het eiland =
<B>Tierra del=20
Fuego</B>, <B>SA-008</B>. Het westelijk deel van dit eiland behoort toe =
aan=20

Chili, en het oostelijk deel aan Argentinie. Jorge is actief vanuit het=20
locatorvak <B>FD55UE</B> en is zeer actief op 6 meter.<B> QSL via =
P.O.Box 110,=20
Ushuaia, 9410, Tierra del Fuego island, Argentina.</P>
<P>Armenie</B>: Eugeni, <B>EK6AD</B> is actief vanuit het locatorvak=20
<B>LN21JR</B>. Hij is vrij veel te vinden op 6 meter wanneer er grote =
openingen=20
zijn. <B>QSL via Eugeni I. Kurgin - Tamantsineri Street 18, Apt. 56 - =
Yerevan=20
375106 - Armenia</B>.</P><B>
<P>Japan</B>: Japan kent reeds enkele jaren machtigingen voor 6 meter. =
Echter de=20
vermogenbeperking was 50 Watt. Sinds de laatste cyclus is dit vermogen=20
opgeschroefd naar 100 Watt en 500 Watt. Sinds kort zijn er ook =
vergunningen te=20
verkrijgen voor een vermogen van 1 kilowatt op 6 meter. Op dit moment =
zijn er al=20
20 tot 30 stations actief met zo een 1 kW vergunning. </P><B>
<P>Jordanie</B>: Koji, JH7FQK is momenteel actief als <B>JY9NX</B>. Hij =
heeft in=20
augustus zijn eerste 6 meter contact gemaakt met Europa, IT9IPQ. Koji is =
razend=20
enthousiast over 6 meter en zal zeer zeker vaker actief zijn. <B>QSL via =
zijn=20
eigen call</B>. Pete, N3FNE is actief als <B>JY9NE</B> met een Alinco =
DX-70TH en=20
een dipool. Pete is niet al te vaak actief op 6 meter daar hij met zijn=20
bescheiden station niet door de QRM heen komt op 50110 kHz als er grote=20
openingen zijn. <B>QSL via zijn eigen call</B> . </P><B>
<P>Kazakstan</B>: Valery, <B>UN3G</B> is vaak actief op 6 meter vanuit =
het vak=20
<B>MN83KF</B>. <B>QSL via DL4BBU</B>.</P><B>
<P>Taiwan</B>: Richard, <B>BV2DP</B> is sinds mei 1991 actief op 6 meter =
vanuit=20
het locatorvak <B>PL05</B>. Hij heeft de beschikking over 100 Watt=20
uitgangsvermogen, en een 6 elements HB9CV en een verticale antenne voor =
6 meter.=20
<B>QSL via P.O.Box 32-144 Taipei Taiwan. R.O.C.</P>
<P>Turkije</B>: Omari, <B>4L5O</B> is actief vanuit het vak =
<B>LN21JR</B>.=20
<B>QSL via TA7A</B>.</P><B>
<P>Verenigde Arabische Emiraten</B>: Almurr, <B>A61AH</B> is actief =
vanuit het=20
vak <B>LL75.</B> Hij maakt gebruik van een Icom IC706 en een 4 elements =
Yagi.=20
<B>QSL via P.O.Box 4800, Dubai, United Arab Emirates</B>. </P><B><FONT=20

SORRY IF THIS IS AN INAPPROIATE GROUP
We need your help
Starting several days before the September 9th MTV music awards at
Lincoln Center, Manhattan New York City, several hams (Peter, KC2CDC and
Nelson KC2CVW) and latter myself, Thomas Tumino, N2YTF thomas@asan.com
heard MTV staff on 70CM HAM FREQUENCIES. When confronted in person
about this they claimed that had licenses and that we should not be
using "their" frequencies.

Myself, Peter and Nelson are filling a complaint with the FCC over the
matter but we need any ham in Manhattan (preferably upper west side area

around lincoln center, at 5 watts in an urban area you have to be in the area) to tune in to the listed (at the end of this post) simplex FM 70cm frequencies and log the content and tape if possible the communications taking place on theses frequencies, THEN FORWARD THE MATERIAL TO ME, Thomas Tumino, N2YTF thomas@asan.com so that we may send it on to the ARRL and the FCC.

Although the MTV music awards took place on 9/9/99, communications have continued through Saturday, Sept. 10 and are expected to continue through Sunday and possibly Monday as the MTV crew is still packing up their equipment.

Nelson, KC2CVW has taped the conversations going on and
Peter, KC2CDC has logged the communications and even caught first and last names of several MTV staffers. The frequencies have been verified using commercial gear and a scope by Nelson and Peter who live in the area of lincoln center. Again, the MTV crew has been spotted using all of the following 70 cm frequencies:
DO NOT INTENTIONALLY INTERFERE WITH THEM OR USE ANY PROFANITY. Follow all amateur rules. This means not talking to them on the air. WE ARE TRYING TO HEAR AND TAPE THEM.
All frequencies seem to be 5 watt hts so don't expect to here these guys over too wide an area. All freq. in MHz

Most active 438.6
438.9

440.35
438.45
438.8
438.85
438.5
439.6
438.35
All 16 frequencies of the simplex fm motorola HT 1000s they are using are in the 70cm ham band.

Thanks for your help!
Lets protect our band.
Thomas, N2YTF

PA0OB (2)
Cees biedt aan gratis een PC Moederboard type 286 compleet met geheugen (30 Mb), een keyboard voor inbouw (nieuw) voor PC. Een en ander is gratis af te halen na telefonische afspraak.
Tel: 013-4672838

PD1AGO (2)
Biedt aan een Pentium 200 PC, met 36 speed CD-ROM, 2,5 GB harddisk, 32 MB EDO RAM geheugen. Miditower uitvoering,compleet met muis en toetsenbord, echter zonder monitor.

Tel: 013-5711967

PE1ITY (2)
Zoekt een schema voor een Minerva kleuren TV, type MT5515. Het binnenwerk van de KTV is van makelij Philips, dus het vervangend schema voor het chasis is ook prima. Verder zoekt hij het nieuwe adres en telefoonnummer van het bedrijf Binell in Nijverdal, gespecialiseerd in schema's en documentaties van allerlei TV's en videos.
Tel: 013-4557150

PA3CLG (1)
Is op zoek naar een adres waar men nog de powermodule kan krijgen van de Standard C156E 2 meter portofoon, Mitsibusti M67798 LAM. Toon heeft reeds verschillende adressen geprobeerd, echter niemand kan hem aan deze module helpen.
Tel: 013-5181978

PE1NLZ (1)
De vader van Andre heeft vanwege verbouwing een hele hoop Radio en TV onderdelen uit de jaren 40, 50 en 60 overcompleet. Verzamelaars kunnen contact opnemen met Andre, en bij de opruiming zal Andre bekijken of er iets interessants voor deze persoon tussen zit.
Tel: 013-5702697

PE1AMN (0)
Biedt aan een TNC2H van Simec, met manual voor 9K6 packet.
Tel: 06-20574323

Korte Berichten

Amateur satellieten

TMSAT-1 TO-31
Uplink 145.925 MHz 9600 baud FSK
Downlink 436.925 MHz 9600 baud FSK
Status: Bruikbaar.
Het vernieuwde programma ProcMail V2.00G is door G7UPN vrijgegeven. Deze software geeft de mogelijkheid beelden van TO-31 te bewerken. De software is bij AMSAT te vinden op: http://www.amsat.org/amsat/software/win32/wisp.

PANSAT PO-34
De Uplink en downlink frequenties zijn nog niet vrijgegeven. De satelliet is nog niet voor algemeen gebruik beschikbaar. Meer informatie over deze satelliet die gebruik maakt van spread spectrum techniek is te vinden op: http://www.sp.nps.navy.mil/pansat/

SUNSAT SO-35
Deze satelliet bevindt zich nog in een testfase. De tweede test van de FM-repeater is zeer goed verlopen. Het SunSat pakket omvat een 1200 and 9600 baud digitaal store-and-forward systeem en een audio "papagaai repeater" dat hoofdzakelijk voor onderwijs demonstraties gebruikt zal gaan worden. De satelliet bevat 2 UHf en 2 VHF zend ontvangers. Voor meer informatie: http://sunsat.ee.sun.ac.za.

UoSAT-12 UO-36
Downlink 437.025 MHz
en/of 437.400 MHz
UoSAT-12 bevat naast verschillende camera's, een digital store-and-forward systeem ook nog een mode L/S transponder maar is nog niet beschikbaar voor algemeen gebruik.

TECHSAT-1B GO-32
   Downlink 435.225 MHz gebruikt HDLC telemetrie zodanig geformatteerd dat een TNC in KISS mode deze kan decoderen.
De satelliet heeft geen continu baken maar verzendt elke 30 seconden een burst op 9600 baud die 3 seconden duurt op 435.225 MHz. Uitgebreide informatie is te vinden op: http://techsat.internet-zahav.net/

RS-16
Het 435 MHz baken werkt. Pogingen om de mode A transponder in te schakelen zijn tot op heden zonder succes gebleken.

SEDSAT-1 SO-33
Downlink 437.910 MHz FM 9600 baud FSK
De satelliet is momenteel niet beschikbaar. Reparatie pogingen zijn tot nu toe allemaal mislukt. Voor informatie zie: http://www.seds.org/sedsat.

Ook HF vanaf International Space Station
Will Marchant, KC6ROL, meldt dat het radioamateur station op het International Space Station (ISS) naast VHF en UHF apparatuur ook uitgerust zal worden met HF apparatuur. Tijdens de in december geplande space-shuttle vlucht STS-101 zal een ruimte-wandeling worden gemaakt, waarbij een HF antenne zal worden bevestigd aan het ISS. De HF apparatuur wordt volgend jaar naar het station gevlogen. Bron: SpaceNews (16-8-99)

Shuttle en 3D kaarten
De Shuttle gaat gegevens verzamelen voor nieuw 3D-kaartmateriaal. Met behulp van een
Duits radar instrument zal vanuit de ruimte een nieuwe 3 dimensionale kaart van de aarde worden gemaakt. Dornier satellietsystemen in Friedrichshafen heeft de radarapparatuur ontwikkeld die hiervoor gebruikt zal gaan worden. Het project wordt 'De Shuttle Radar Topografie Missie' genoemd. (SRTM) De 11 dagen durende vlucht van het ruimteveer Endeaver begint op 16 september 1999. Het idee van de missie is in 1994 ontstaan. Toen zijn tijdens twee space Shuttle vluchten met behulp van Duits/Italiaanse X-SAR radar-instrumenten kaarten vervaardigd. Na deze missie bleken de verzamelde gegevens bijzonder waardevol. Gedurende de SRTM-missie is men nu van plan om binnen de 60e NB en de 56e ZB alles in kaart te brengen. Hiertussen ligt ca. 80 procent van de landmassa's op aarde. Voor dit doel moet het bestaande X-SAR instrument voorzien worden van een extra ontvangst-kanaal en een tweede antenne worden gemonteerd aan het eind van de 60 meter lange robotarm van de Discovery. De SRTM zullen iedere 30 meter een waarneming doen met een nauwkeurigheidvan 6 meter in de hoogte. Al deze gegevens kunnen gebruikt worden voor navigatie, samenstellen van rampenplannen, infrastructuur en klimaatmodellen en weersvoorspellingen. Al 25 landen hebben een bestelling gedaan voor het overnemen van de gegevens. Het instrumentenpakket zal

geinstalleerd worden in de vrachtruimte van de Shuttle. Bron: PA3EMS.

Lokaal Nieuws

Cursus nieuws

De regio Tilburg kent 2 kwalitatief zeer goede cursusen die opleiden voor de N/C licentie.
De VRZA afdeling Hart van Brabant start na de vakanties met een nieuwe N/C curus, deze cursus vindt op een door de weekse dag plaats in het scoutinggebouw van de Rey de Carle scoutinggroep gelegen aan de sportvelden aan de Heerenveldeweg in de wijk Reeshof. Voor meer informatie kunt u contact opnemen met Michel Elissen, PA3DGW, tel: 013-4673734 of per E-mail: pa3dgw@vrza.org .
Joop, PA3HIM, start medio november namens de VERON afdeling Tilburg met een N/C cursus die een jaar zal gaan duren. De cursus vindt elke dinsdag plaats van 19.30-21.30 uur in wijkcentrum 't Zand, Beneluxlaan 74 te Tilburg. Joop gelooft in een zeer persoonlijke aanpak, en zal daarom niet meer dan 8 cursisten per keer aannemen. Op dit moment zijn er al 6 kandidaten, dus er zijn nog 2 beschikbaar. Geintereseerden kunnen Joop bellen op tel: 0416-337261.
Morsecursus, indien er genoeg belangstelling is zal Michel, PA3DGW ook dit najaar een cursus opstarten. Echter op dit moment zijn er 3 aanmeldingen en is het opstarten niet interesant. Mocht u ook belangstelling hebben voor de morsecursus, aarzel u dan niet om op te geven, Michel Elissen, PA3DGW tel: 013-4673734 of E-mail: pa3dgw@vrza.org .

Afdelingsbijeenkomsten in de regio

Kempische Amateur Radio Club

De bijeenkomsten van de KAR vinden elke tweede donderdag van de maand plaats in Cultureel Centrum d'n Herd, aanvang 20.15 uur. De volgende bijeenkomst is op donderdag 12 oktober. Elke zondagavond om 19.30 uur is de Kempische ronde met de call PI4KAR op 145,575 MHz. Verder informatie over de KAR kunt u vinden op internet, het adres van de homepage is: http://www.qsl.net/pi4kar/ . Voor verdere informatie kunt u terecht bij de secretaris, Bert Plaum, PA3ENH, Stijn Streuvelslaan 6, 5531VB Bladel, tel: 0497-387083. Via packet: PI4KAR@PI8ZAA of via E-mail: bplaum@iaehv.nl .

VRZA afdeling Hart van Brabant

De bijeenkomsten van de VRZA afdeling Hart van Brabant vinden elke eerste donderdag van de maand plaats in het scoutinggebouw van de Rey de Carle scoutinggroep gelegen aan de sportvelden aan de Heerenveldeweg in de wijk Reeshof, aanvang 20.00 uur. De eerst komende verenigingsavond is op donderdag 7 oktober. Elke tweede en vierde woensdag van de maand is er een ronde om 20.30 uur 's avonds op 145,400 MHz onder de call PI4HVB. Meer informatie over de VRZA afdeling Hart van Brabant kunt u terugvinden op internet, de homepage is: http://home.worldonline.nl/~pe1orz/pi4hvb.html . Informatie of vragen kunt opvragen of stellen aan Michel Elissen, PA3DGW tel: 013-4673734. U kunt ook contact opnemen via packet: PI4HVB@PI8HWB of via E-mail: pa3dgw@vrza.org .

VERON afdeling Tilburg

De VERON afdeling Tilburg houdt elke tweede dinsdag van de maand zijn

afdelingsbijeenkomsten in wijkcentrum 't Zand, Beneluxlaan 74 te Tilburg (in het zelfde gebouw als de openbare bibliotheek). De bijeenkomsten beginnen op 20.00 uur en zijn voor iedereen vrij toegankelijk, lid of geen lid van de VERON. De volgende verenigingsavond is gepland voor dinsdag 14 september, op deze avond is niet bijzonders gepland, en deze avond staat dan ook in het teken van bijpraten na de vakantie. Voor verdere informatie over de VERON afdeling Tilburg, kunt u onze internet pagina raadplegen, u kunt daar komen door op internet de VERON homepage te raadplegen, http://www.veron.nl/amrad , als u afdeling aanklikt en uw klikt daarna afdeling Tilburg aan komt u vanzelf op de homepage terecht. U kunt ook rechtstreeks het volgende adres intikken: http://home.worldonline.nl/~pe1orz/pi4til.html . Vragen over de VERON afdeling Tilburg of informatie opvragen kunt u stellen via packet PI4TIL@PI8SHB of via E-mail pa3dzm@amsat.org . Uiteraard kunt u ook telefonisch contact zoeken, tel: 06-53616482 . Wilt u per post informatie aanvragen dan moet u dat sturen ter attentie van: PA3DZM, Eric van den Bergh, Europalaan 50, 5042 ZT Tilburg.

Contest nieuws

VHF en hoger contest nieuws

Scandinavian activity 432 MHz
Dinsdag 14 september van 18.00-22.00 UTC.

VRZA Regio Contest
Dinsdag 14 september van 19.00-22.00 UTC.

HF contesten

Washington Salmon Run 1999
Aanvang van de contest op zaterdag 18 september 16.00 UTC tot en met zondag 19 september 07.00 UTC, en daarna later op zondag van 16.00 UTC tot en met 24.00 UTC. Single Operators mogen maximaal 24 uur deelnemen. Het doel van de contest is het werken met, stations uit de staat Washington op alle HF banden in CW, SSB of mixed mode. Klasse van deelname: Single Operator en Multi Operator Single Transmitter in de klasse, 1:) QRP (5 Watt maximaal), 2:) low-power (200 Watt maximaal) en 3:) open klasse (meer als 200 Watt). Uitwisselen RS of RST rapport + DXCC land. Stations in de staat Washington geven hun county door. Puntentelling, 2 punten voor een verbinding in SSB, 3 punten voor een CW verbinding, 6 punten voor een verbinding met een Novice/Tech station in CW, Novice en Technician stations zullen met /N en /T herkenbaar zijn. Het zelfde station mag op meerder banden in CW en SSB gewerkt worden. Multipliers zijn de counties van de staat Washington (in totaal zijn er 39 counties), elke multiplier mag eenmaal per mode geteld worden ongeacht de band. Score het aantal QSO punten maal het aantal multipliers. Als met in de klasse QRP deelneemt mag men de totaal score maal 3 vermenigvuldigen, in de low-power sectie mag de totaal score maal 2 vermenigvuldigd worden. De logs moeten de volgende items bevatten, datum en tijd in UTC, gewerkte station, band, gewerkte mode, score, en multiplier. Dupe shets zijn nodig voor meer als 200 QSO's. Logs insturen voor 31 oktober naar: W7FR Western Washington DX Club, P.O. Box 395, Mercer Island, WA 98040, USA.

AGB (Activity Group of Belarus) NEMIGA Contest
Zaterdag 18 september 1999, aanvang 05.00 tot 06.00 UTC. Het uur is ingedeeld in 4 periodes. Om het kwartier start de nieuwe periode. Men mag in een periode twee QSO's maken met hetzelfde station, een QSO in CW en een in SSB. Band is 80 meter mode CW en SSB. Men kan deelnemen in de Single Operator klasse en in de Multi Operator klasse. Voor luisteramateurs is er een speciale SWL klasse. Uitwisselen een RS of RST rapport en een serie nummer. Puntentelling, 1 punt per QSO. Elk gewerkt nieuw station is een multiplier. Logs insturen naar voor 20 oktober naar Igor "Harry" Getmann, EU1EU, P O Box 143, MINSK-5, 220005, BELARUS.

Scandinavian Activity Contest CW
Zaterdag 18 september aanvang 12.00 UTC, en de contest eindigd 24 uur later op zondag 19 september om 12.00 UTC. Het doel van de contest is het werken met stations in Scandinavie, op 80, 40, 20, 15 en 10 meter in de mode CW. De Scandinavische stations hebben de volgende prefixen, LA/LB/LG/LJ (Noorwegen), JW (Svalbard en Bear eiland), JX (Jan Mayen), OF/OG/OH/OI (Finland), OF0/OG0/OH0 (Aaland eiland), OJ0 (Market Reef), OX (Groenland), OY (Faroe eilanden), OZ/5P (Denemarken), SI/SJ/SK/SL/SM/7S/8S (Zweden) en TF (Ijsland). Klasse van deelname: Single Operator, Single Operator - QRP. Men mag geen gebruik maken van DX spotting netten. QRP vermogen is maximaal 5 Watt uitgangsvermogen. Multi Operator Single Transmitter, in deze klasse is het gebruik van DX spotting netten toegestaan. SWL. De 10 minuten regeling is van toepassing. Uitwisselen een RST rapport en een volgnummer. Het zelfde station mag op meerder banden gewerkt worden. Elk QSO levert 1 punt op, de multipliers zijn de call districten in elk Scandinavisch land. B.v. SI3, SK3 SM3, 7S3 etc. is een district en levert 1 multiplier op. Portabel stations gelden als het 0 district, b.v. LA/PA3AAA telt als LA0. Score is het aantal QSO's op alle banden, maal het aantal multipliers op alle banden. Logs moeten het volgende aangeven, datum en tijd in UTC, het gewerkte station, RST rapport + verzonden volgnummer, ontvangen RST rapport en ontvangen volgnummer, band, multiplier, en punten. SWL logs moeten het volgende aangeven, datum en tijd in UTC, band, gehoorde Scandinavische stations, rapport en volgnummer verzonden door het station, SWL's eigen rapport, station gewerkt door het Scandinavische station, multipliers en punten. Alle logs moeten vergezeld gaan van een summary sheet met daarop de call of het luisternummer van het staion, de contest categorie waarin met deelneemt, naam van de operator, en het adres waar het station is opgesteld. Aantal QSO's per band min het aantal duplicaten. Aantal duplicaat QSO's per band, multipliers per band, QSO punten per band en de eind score. Logs insturen naar: SRAL Contest Manager, OH3WW - Hannu Saila, Muurainkorventie 17, FIN-33470 YLOJARVI, FINLAND. E-mail logs naar: sac99@sral.fi of sac@contesting.com.

DX nieuws

Europa

9A-Kroatie
9A5V, 9A3VM en 9A5KV zullen tussen 17 en 19 september actief zijn als /p vanaf het eiland Kolocep, EU-016. QSL via het bureau.

9H-Malta

Leden van de VRZA zullen vanaf komende zaterdag 18 september tot en met 10 oktober actief zijn met de call 9H0VRZ. Men zal op 80-6 meter inclusief de WARC banden actief zijn in CW en SSB. De verschillende leden van de groep hebben ook individuele calls aangevraagd, dus ook met 9H3 calls zal men activiteiten op de verschillende banden kunnen beluisteren. Meer informatie kan men van internet afhalen, webpage: http//www.vrza.org . QSL via PA0JR.

OJ0-Market Reef
Dennis, K7BV zal tussen 14 september en 20 september actief zijn van Aland Islands (OH0, EU-002), en Market Reef (OJ0, EU-053). De nadruk van zijn reis zal liggen op Market Reef. Hij zal in de namiddag van 14 september arriveren op Market Reef, en zal daar blijven tot de morgen uren van de 20ste. Hij zal uitkomen op 10-160 meter, inclusief de WARC banden, in CW en SSB. De nadruk zal echter liggen op 80 en 160 meter gedurende de nachtelijke uren. QSL voor OH0/K7BV en OJ0/K7BV via KU9C.

OH0-Aland eiland
Jukka, OH6LI zal volgend weekend, 18 en 19 September in de SAC-CW contest deelnemen als OH0V, vanaf Aland eiland, EU-002. Buiten de contest zal hij met de call OH0JJS actief zijn voornamelijk op de WARC banden. QSL OH0V via OH4JLV, en voor OH0JJS via OH6LI.

SV-Griekenland
3 Hongaarse amateurs zullen van 1 tot en met 8 september actief zijn vanaf het Griekse eiland Korfu, EU-052. Kijk uit naar SV8/HA6NL/p, SV8/HA6PS/p en SV8/HA6ZV/p, de activiteiten zullen op alle banden zijn in CW, SSB en RTTY. QSL via hun eigen calls.

SV9-Kreta
Bill, ON5JE en Luk, ON4BB zullen tussen 15 en 22 September actief zijn als SV9/eigen call vanaf Kreta, EU-015. QSL via de eigen calls.

Z3-Macedoni&#65533;
YL, IV3FSG gaat deze week naar Skopje, Macedoni&#65533;, alwaar zijn tot het einde van de maand een humanitaire missie zal uitvoeren. Ze hoopt actief te kunnen zijn als Z38/IV3FSG in SSB en RTTY. QSL via haar eigen call.

Amerika

4U-Verenigde Naties
Amadeo, EA5FFC zal vanaf morgen tot en met 24 september actief zijn vanaf het het station 4U1ITU van de Verenigde Naties. Hij zal op alle HF banden inclusief de WARC banden in SSB actief zijn. QSL via 4U1ITU.

KL-Alaska
John, AL7RB zal van 16-21september actief zijn vanaf het eiland Attu , NA-064. Hij zal daar zijn voor werk, maar zal in zijn vrije tijd actief zijn. QSL via het KL-bureau.

VP5-Turks & Caicos eilanden
Chris, HB9CYV en Martin, HB9CYN zijn tussen 16 en 26 september actief als VP5/HB9CYV en VP5/HB9CYN vanaf Noord Caicos, NA-002. De logs zijn beschikbaar op internet: http://mypage.bluewin.ch/hb9cyn. QSL via hun eigen

calls.

W-Verenigde Staten van Amerika
Tony, WF1N en Lou, W1DIG zullen op vrijdag 17 september rond 19.00 UTC starten met hun uitzending vanaf het eiland Appledore, NA-148. Ze zullen actief blijven tot maandag 20 september 12.00 UTC. QSL via hun eigen calls.

ZF-De Kaayman eilanden
Steve, W7TZ is tot en met 18 september actief als ZF2CQ. Steve is alleen actief in SSB. QSL alleen direct via W7TZ.

Afrika

3C0-Pagalu
Vanaf komende dinsdag 14 september tot en met 24 september zijn EA5YN, EA5BYP, 3C1GS en 3C1RV actief als 3C0R vanaf het eiland Annobon. Ze zullen actief zijn van 160-2 meter in CW, SSB en RTTY. Men heeft de beschikking over 4 transceivers, yagi's, verticale antennes en dipolen. Meer informatie is op internet terug te vinden: http://web.jet.es/lynx of op http://www.multimedia.com.cdxc/ .

9X-Rwanda
Vladimir zal als 9X/RE3A vanaf 15 september actief zijn vanuit Rwanda. Hij zal daar een aantal maanden verblijven op een humanitaire missie. Hij zal vooral actief zijn op 10, 15 en 20 meter. QSL via RW3AH.

Azi&#65533;

9K-Koeweit
Charles, KK5OQ, is QRV als 9K2/KK5OQ, kijk vooral naar hem uit in RTTY op alle banden. QSL via zijn eigen call.

9M2-Maleisi&#65533;
Tex, 9M2TO is komende zaterdag 18 september tot en met 21 september actief vanaf de Redang Beach Resort op Redang eiland, AS-073. De activiteiten zullen voornamelijk plaats vinden in CW op 10-40 meter. Zijn zoon JF0GEV zal ook als operator fungeren. QSL via JA0DMV.

BY-China
Het speciale station BT0A zal vanaf morgen 13 september, 08.00 UTC actief zijn vanuit het Geografisch centrum van Azi&#65533;. De BI7Y DX-peditie naar de Xisha archipel, AS-???, waarover vorige week in de ronde was bericht, is uitgesteld. Op 10 september meldde een lid van het DX-peditie team, BA1AJ, momenteel actief als BA1AJ/7 vanaf Hainan eiland AS-04, dat de DX-peditie met 1 week was uitgesteld. Dat zou betekenen dat de DX-peditie deze week moet starten.

E4-Palestina
Ayar, OZ1ACD is terug in Hebron, en heeft plannen om vanaf 17 september actief te zijn als E44/OZ6ACD. QSL via OZ1ACB.

EP2-Iran
Voor diegene die nog steeds zitten te wachten op een QSL kaart van Abdullah,

EP2FM, het volgende bericht ontvangen ven Randy, WX5L. Het schijnt dat het verlies van het aantal enveloppen in Abdullah's postbus schrikbarend hoog is. Naar alle waarschijnlijkheid is er een postbode die in de gaten heeft dat er regelmatig enveloppen met "green stamp" bij Abdullah in de postbus vallen. Mocht u in staat zijn om contact te leggen met Abdullah dan zal hij de kaart alsnog opsturen na het cross checken van zijn logs.

OD-Libanon
Op dit moment is Ali, JY4NE actief als OD/JY4NE. Ali zal tot het einde van de maand in Libanon verblijven. QSL via KB6NAN.

XU-Cambodja
Andy, G4ZVJ zal vanaf 15 september ongeveer 10 dagen actief zijn vanuit Cambodja. Andy heeft een aanvraag ingediend voor een licentie, call is echter op dit moment nog niet binnen. De activiteiten van Andy zijn op alle HF banden alleen in CW. Na het bezoek aan Cambodja zal Andy doorreizen naar de Filippijnen, en Thailand alwaar hij respectievelijk als DU3/G4ZVJ en als HS0/G4ZVJ actief zal zijn tot en met 6 oktober. QSL via zijn eigen call.

Oceani

3D2-Fiji eilanden
Vanaf morgen 13 september tot en met komende donderdag 16 september is EA4DX actief met de call 3D2DX/p. Hij zal actief zijn op 10-80 meter in SSB vanaf het eiland Viti Levu, OC-016 op de IOTA lijst. QSL alleen direct via EA4CP.

KH8-Amerikaans Samoa
Vanaf vandaag tot en met 17 september zijn KH9/SM7PKK en KH8/SM0AGD actief op alle HF banden in CW en SSB. QSL via LA7MFA. LA7MFA zelf, zal vanaf komende dinsdag 14 september tot en met vrijdag 17 september actief zijn met de call KH8/KK6HC of eventueel als KH8/LA7MFA. Zijn activiteiten beperken zich tot 40 en 20 meter in CW. QSL via zijn eigen call.

T8-Palau
Toshi, JA6QXW en Mac, JA1OYP zullen vanaf vandaag tot en met 15 september actief zijn als T88XW en T88XX. De activiteiten zullen zijn op 80-10meter inclusief de tussenliggende WARC banden en op 6 meter. QSL via de eigen calls.

Speciale calls

EY11OO
De Tajik Amateur Radio League, de Tadjiksche amateur vereniging zal op alle HF banden met de call actief zijn in CW, SSB, RTTY, PSK31 en SSTV, vanwege het 1100 jarig bestaan van de staat Tadjikistan gesticht door Ismoili Somoni. QSL via DJ1SKO.

UN100OIL
Leo, UN2O is tot en met 15 september actief met deze speciale call in verband met het 100 jarig bestaan van de olie industrie in Kazakstan. QSL via P.O. Box 1, Atyrau 465002, Kazakstan.

6 meter nieuws

Bakennieuws: De Midlands Amateur Radio Club vraagt om rapporten van het baken ZS5SIX op 50,321 MHz. Graag hebben ze rapporten van het baken via het E-mail adres van ZS5QR, ccar@quarry.kzntl.gov.za.
Australie: VK3OT/VK8 is vanaf morgen actief van Ayres Rock 400 km ten westen van PG66 Centraal Australie. Het vak is PG67 of PG68. QSL via zijn eigen call.
Belau: Jim, N7EIU en Kazu, JA3ART zijn van 15 tot en met 19 september actief als respectievelijk T88MM en T88JJ. QSL via hun eigen calls.
Cyprus: Nick, 5B4PL heeft zijn 5 elements yagi her geconstrueerd, en de antenne is nu terug op een hoogte van 25 meter. De laatste tijd heeft hij veel TEP condities richting ZS6 en 7Q.
Equatoriaal Guinea: Alan, 3C5I is terug actief op 6 meter. Na een tijdje uit de running te zijn geweest door een verhuizing en drukte op het werk, heeft Alan bij zijn nieuwe huis een 6 elements antenne opgezet op 8 meter hoogte. Dit is wel een teruggang van 2 maal een 6 elements gestacked op 15 meter hoogte, maar vermindering van TVI en het vermijden van burenruzies hebben Alan genoopt tot deze stap.
Fiji eilanden:Vanaf vandaag zal JH7MSB actief zijn als 3D2KI tot en met 16 september.
Finland: Harry, OH6YF zal vanaf 16 tot en met 27 september actief zijn op 6 meter vanuit het zeldzame vak KP02vl. Hij zal gebruik maken van een Icom IC735 met transverter, en eindtrap van 150 Watt en de antenne is een 7 elements yagi met een boomlengte van 7,4 meter. QSL via het bureau.
Madagascar: F5QT zal in de maanden oktober en november 2 maanden actief zijn op 6 meter. Hij zal gebruik maken van 100 Watt uitgangsvermogen en een 5 elements yagi.
Mali: Larry, TZ6VV is momenteel erg actief op 6 meter vanuit het locatorvak IK63uk. QSL via Larry Erwin, P.O. Box 395, Segou, Mali.
Mozambique: DL6DQW is van zaterdag 18 september tot en met dinsdag 21 september actief als C91RF vanaf het eiland Inhaca, AF-066.
Niger: Dan, 5U7DG zal tot de zomer van 2000, of wanneer de omstandigheden het toelaten tot de zomer van 2001 actief zijn. Dan is de enige amateur vanuit Niger actief op 6 meter, maar is helaas niet al te vaak QRV. De laatste maal dat hij gehoord werd op 6 meter in Europa was in maart van dit jaar in het vak JM78. QSL via K4SE.
St. Peter & St. Paul Rotsen: Eind september, begin oktober zullen PS7KM en PT7AA, respectievelijk als ZX0SK en ZW0SP 10 dagen, rond om de klok, 24 uur per dag actief zijn.

AGENDA

Zondag 12 september Vandaag de 21e Ballonvossenjacht, er zal door de ballon een tv camera meegevoerd worden die beelden in de 13 cm band, 2415 GHz. Deze beelden zullen door verschillende ATV stations worden gerelayeerd. De zenders bevestigd aan de meteoballon zenden afwisselend een signaal uit op 145,350 en 145,375 MHz. Tevens zal er ten behoeve van de jagers 24 uur een spraakstation in de lucht zijn met de roeptekens PI6NOS op 145,800 MHz. PI2NOS zal worden gebruikt voor het radioverkeer op 70 cm. Op 80 meter zal men een zender gebruiken met een landelijke dekking. De start is om 14.00 uur, de vlieghoogte zal ca. 10 km zijn en het vermogen van de zenders is 50 mW. Het een en ander zal ook te beluisteren zijn op de grote relaisstations op 2 meter.

Zaterdag en zondag 18 en 19 september wordt de UKW tagung gehouden in de Mannheimer Maimarkthalle te Weinheim, Duitsland.

Zondag 19 September 1999 organiseert de UBA sectie Noord Oost Limburg een eerste uitgave van de hambeurs " HAMRADIO EVENT '99 "'. Het wordt een radiomarkt met zowel nieuwe - als 2de handstoestellen en onderdelen. Daarnaast is er een gezellig cafetaria voorzien om een drankje te nuttigen of een broodje of een stuk taart te eten. De hambeurs wordt gehouden in 't Parochiehuis te Bocholt Belgie op het Kerkplein. Bocholt is een gemeente in het Noordoosten van Belgisch Limburg, vlak tegen de Nederlandse grens. De zaal is toegankelijk voor publiek van 10.00 uur tot en met 18.00 uur.

Zaterdag 25 september 1999 is er voor de 18de maal de Radio-onderdelen-markt, Antennemeetdag en Amateurtreffen van de VERON afd. Meppel, georganiseerd door de stichting R.O.M. Dit evenement zal, als altijd, worden gehouden bij wegrestaurant 'De Lichtmis' gelegen aan de A-28 tussen Zwolle en Meppel, afslag Nieuwleusen-Hasselt.

Vrijdag 1 tot en met donderdag 7 oktober wordt de Firato '98, de grote consumentenelektronicabeurs, in de RAI te Amsterdam gehouden.

Zondag 3 oktober, organiseert de UBA sectie La Louviere een amateur en informatica beurs in de Expo hallen te La Louviere, Belgi�.

Dinsdag 5 oktober, organiseert de VERON afdeling Breda een lezing over ATV gehouden door PA3CNX in het bijzonder de ATV repeater PI6ATV komt aan het bod. De lezing wordt gehouden in cafe zaal de Toerist, Teteringsedijk 145 te Breda.

Zondag 10 oktober de open dag van de Benelux DX Club, gehouden in het dorpshuis te Badhoevedorp.

Zaterdag 16 en zondag 17 oktober, Jamboree On The Air.

Zaterdag, 16 oktober, De jaarlijkse hambeurs van de UBA sectie AAA van Antwerpen. De beurs wordt gehouden in de speelzaal van het Koninklijk Atheneum, Mechelse Steenweg (N1), te Mortsel, bij Antwerpen in Belgi�.

Zaterdag 23 oktober, de Dag van de Amateur, gehouden in de America hal te Apeldoorn.

Zaterdag en zondag 30 en 31 oktober de CQ WW SSB contest.

Zondag 31 oktober, organiseert de Radio Amateur club drie provincien punt RACDPP een grote hambeurs "RAGETO" genaamd. Deze beurs vind plaats in Tessenderlo in het Technish Heilig hart Instituut, Heilig Hartlaan 16 3980 Tessenderlo Belgi�. De beurs is open van 9 tot 17 uur. Het inpraatstation ON4DPP is QRV op 144,5125 MHz. Naast een boeiende ham- en computerbeurs met talrijke deelnemers uit binnen en buitenland is er ook de mogelijkheid een hapje en een drankje te nuttigen.

Woensdag 3 november, de examens radiotechniek en voorschriften deel I en II,

gehouden in de Badmingtonhal te Nieuwegein.

Zaterdag 6 november de Radiomarkt gehouden in de VEONN-remise te Assen.

Zondag 7 november, organiseert de UBA sectie Torhout een hambeurs te Zedelgem Belgi&#65533;.

Zaterdag 13 november, wordt er door de UBA sectie Radio Club van Brussel, een hambeurs georganiseertd te Evere Belgi&#65533;.

Vrijdag 19, tot en met zondag 21 november, de HCC dagen gehouden in de Jaarbeurs te Utrecht.

Zaterdag en zondag 27 en 28 november de CQ WW CW contest.

Dinsdag 7 en woensdag 8 december, de examens opnemen en seinen van morsetekens 12 woorden per minuut gehouden in de badmintonhal te Nieuwegein.

Zondag 19 december de KAR hambeurs gehouden in cultureel centrum d'n Herd te Bladel.

Zondag 26 december, een hambeurs van de UBA sectie RST, gehouden in St. Truiden te Belgi&#65533;

Berichten of advertenties voor de ronde kunt u opgeven via Packet: PI4TIL@PI8SHB, via email: pi4til@amsat.org of telefonisch via tel: 06-53616482.

Advertenties

PA0OB (3)
Cees biedt aan gratis een PC Moederboard type 286 compleet met geheugen (30 Mb), een keyboard voor inbouw (nieuw) voor PC. Een en ander is gratis af te halen na telefonische afspraak.
Tel: 013-4672838

PD1AGO (3)
Biedt aan een Pentium 200 PC, met 36 speed CD-ROM, 2,5 GB harddisk, 32 MB EDO RAM geheugen. Miditower uitvoering,compleet met muis en toetsenbord, echter zonder monitor.
Tel: 013-5711967

PE1ITY (3)
Zoekt een schema voor een Minerva kleuren TV, type MT5515. Het binnenwerk van de KTV is van makelij Philips, dus het vervangend schema voor het chasis is ook prima. Verder zoekt hij het nieuwe adres en telefoonnummer van het bedrijf Binell in Nijverdal, gespecialiseerd in schema's en documentaties van allerlei TV's en videos.
Tel: 013-4557150

PA3CLG (2)
Is op zoek naar een adres waar men nog de powermodule kan krijgen van de Standard C156E 2 meter portofoon, Mitsibusti M67798 LAM. Toon heeft reeds verschillende adressen geprobeerd, echter niemand kan hem aan deze module helpen.
Tel: 013-5181978

PE1NLZ (2)
De vader van Andre heeft vanwege verbouwing een hele hoop Radio en TV

onderdelen uit de jaren 40, 50 en 60 overcompleet. Verzamelaars kunnen contact opnemen met Andre, en bij de opruiming zal Andre bekijken of er iets interessants voor deze persoon tussen zit.
Tel: 013-5702697

PE1AMN (1)
Biedt aan een TNC2H van Simec, met manual voor 9K6 packet.
Tel: 06-20574323

PA2CST (0)
Zoekt informatie of het schema over de Wireless Set type 62. Deze set lijkt op de bekende WS-19 echter met enige markante verschillen.
Tel: 013-4552394 of op de VERON afdeling Tilburg verenigingsavond, of via 145,400 MHz.

PD0MHS
Is op zoek naar de volgende schema's voor in de Schematheek. Alinco DJ541C, LPD portofoon, AOR Scanner AR8000, Albrecht AE44H scanner. Tevens is Toine op zoek naar het URL adres van de Duitse scannersite. In het bezit van de schematheek een Engelse database met de meest gangbare Philips apparatuur en de meest voorkomende fouten.
Packet: PD0MHS@PI8ZAA E-mail: pdomhs@cello.nl LET OP PDO niet PD0 in email adres.

Lokaal Nieuws

Cursus nieuws
De regio Tilburg kent 2 kwalitatief zeer goede cursusen die opleiden voor de N/C licentie.
De VRZA afdeling Hart van Brabant start na de vakanties met een nieuwe N/C curus, deze cursus vindt op een door de weekse dag plaats in het scoutinggebouw van de Rey de Carle scoutinggroep gelegen aan de sportvelden aan de Heerenveldeweg in de wijk Reeshof. Voor meer informatie kunt u contact opnemen met Michel Elissen, PA3DGW, tel: 013-4673734 of per E-mail: pa3dgw@vrza.org .
Joop, PA3HIM, start medio november namens de VERON afdeling Tilburg met een N/C cursus die een jaar zal gaan duren. De cursus vindt elke dinsdag plaats van 19.30-21.30 uur in wijkcentrum Ût Zand, Beneluxlaan 74 te Tilburg. Joop gelooft in een zeer persoonlijke aanpak, en zal daarom niet meer dan 8 cursisten per keer aannemen. Op dit moment zijn er al 6 kandidaten, dus er zijn nog 2 beschikbaar. Geintereseerden kunnen Joop bellen op tel: 0416-337261.
Morsecursus, indien er genoeg belangstelling is zal Michel, PA3DGW ook dit najaar een cursus opstarten. Echter op dit moment zijn er 3 aanmeldingen en is het opstarten niet interesant. Mocht u ook belangstelling hebben voor de morsecursus, aarzel u dan niet om op te geven, Michel Elissen, PA3DGW tel: 013-4673734 of E-mail: pa3dgw@vrza.org .

Afdelingsbijeenkomsten in de regio

Kempische Amateur Radio Club
De bijeenkomsten van de KAR vinden elke tweede donderdag van de maand plaats in Cultureel Centrum d'n Herd, aanvang 20.15 uur. De volgende bijeenkomst is

op donderdag 12 oktober. Elke zondagavond om 19.30 uur is de Kempische ronde met de call PI4KAR op 145,575 MHz. Verder informatie over de KAR kunt u vinden op internet, het adres van de homepage is: http://www.qsl.net/pi4kar/ . Voor verdere informatie kunt u terecht bij de secretaris, Bert Plaum, PA3ENH, Stijn Streuvelslaan 6, 5531VB Bladel, tel: 0497-387083. Via packet: PI4KAR@PI8ZAA of via E-mail: bplaum@iaehv.nl .

VRZA afdeling Hart van Brabant
De bijeenkomsten van de VRZA afdeling Hart van Brabant vinden elke eerste donderdag van de maand, plaats . De eerst komende verenigingsavond is op donderdag 7 oktober, deze avonden worden gehouden in het scoutinggebouw van de Rey de Carle scoutinggroep gelegen aan de sportvelden aan de Heerenveldeweg in de wijk Reeshof, aanvang 20.00 uur. Elke tweede en vierde woensdag van de maand is er een ronde om 20.30 uur 's avonds op 145,400 MHz onder de call PI4HVB. Meer informatie over de VRZA afdeling Hart van Brabant kunt u terugvinden op internet, de homepage is: http://home.worldonline.nl/~pe1orz/pi4hvb.html . Informatie of vragen kunt stellen aan Michel Elissen, PA3DGW tel: 013-4673734. U kunt ook contact opnemen via packet: PI4HVB@PI8HWB of via E-mail: pa3dgw@vrza.org .

VERON afdeling Tilburg
De VERON afdeling Tilburg houdt elke tweede dinsdag van de maand zijn afdelingsbijeenkomsten in wijkcentrum 't Zand, Beneluxlaan 74 te Tilburg (in het zelfde gebouw als de openbare bibliotheek). De bijeenkomsten beginnen op 20.00 uur en zijn voor iedereen vrij toegankelijk, lid of geen lid van de VERON. De volgende verenigingsavond is gepland voor dinsdag 12 oktober, op deze avond was een lezing gepland, echter deze is op het laatste moment afgezegd. Ik ben nog druk doende iets anders te regelen, hopelijk lukt dat allemaal nog op tijd. Ik houd u nog op de hoogte. De verenigingsavond van dinsdag 9 november staat in het teken van een ruil en verkoopavond. Voor verdere informatie over de VERON afdeling Tilburg, kunt u onze internet pagina raadplegen, u kunt daar komen door op internet de VERON homepage te raadplegen, http://www.veron.nl/amrad , als u afdeling aanklikt en uw klikt daarna afdeling Tilburg aan komt u vanzelf op de homepage terecht. U kunt ook rechtstreeks het volgende adres intikken: http://home.worldonline.nl/~pe1orz/pi4til.html . Vragen over de VERON afdeling Tilburg of informatie opvragen kunt u stellen via packet PI4TIL@PI8SHB of via E-mail pa3dzm@amsat.org . Uiteraard kunt u ook telefonisch contact zoeken, tel: 06-53616482 . Wilt u per post informatie aanvragen dan moet u dat sturen ter attentie van: PA3DZM, Eric van den Bergh, Europalaan 50, 5042 ZT Tilburg.

Korte Berichten

Radio amateurs na aardbeving in Turkije
Al in het eerste uur na de verwoestende aardbeving op 17 augustus in Turkije begonnen leden van de Amateur Radio Emergency Service, georganiseerd door de TRAC (Turkish Amateur Radio Society) met de voorzieningen van een nood-communicatie net. De eerste drie dagen na de aardbeving werd alle nodige communicatie door radioamateurs gedaan.' meldde TRAC secretaris Yuksel Hak vorige week. Deze zei, dat telefoon en andere communicatie netwerken waren verbroken, zowel als gevolg van de uitval van electriciteit alsook door overbelasting van wat nog werkte. De aardbeving in West Turkije

duurde 48 seconden en gaf 7.4 op de schaal van Richter. Het dodental werd toen geschat op 13.000, maar is inmiddels veel hoger gebleken. De locale radioamateurs in het rampgebied gebruikten zowel HF, als VHF om te helpen bij de communicatie tussen de plaatselijke crisis centra en de hoofdstad Ankara. Amateurs maakten vaak gebruik van hun mobiele apparatuur, en zorgden later voor de opzet van een paar VHF-repeaters. Er werd ook veel gebruik gemaakt van VHF en UHF portofoons. Hak meldde dat de gewone amateurfrequenties ook van nut waren om samen met de andere radiosystemen die door de overheden gebruikt werden, te werken. TV-stations, dagbladen en weekbladen loofden de steun, die door de amateurs gegeven werd. Zij bewezen de belangrijke rol van de amateur-diensten tijdens rampen.

Morse eis verlaag in Zweden
In Zweden is de morse eis verlaagd van 12 woorden per minuut naar 5 woorden per minuut. Tevens hebben de Zweedse authoriteiten het aantal machtigingsklassen verlaagd van 4 naar 3. De nieuwe Zweede klasse 1 machtiging verleent de houder de toegang tot alle amateurbanden, en vereist het 5 woorden per minuut morse examen. De klasse 2 licentie is de VHF en UHF licentie. Tevens introduceerden de Zweden een 3 jarig niet verlengbaar studie licentie, die volledige toegang geeft tot de VHF en UHF banden zonder supervisie.

Moleculenmotor
Een Nederlands-Japans team heeft aangetoond, dat het mogelijk is een motor te maken op moleculair niveau. Onder leiding van chemicus professor dr. B.J.Feringa van de Rijksuniversiteit Groningen construeerde het onderzoeks team een symmetrisch molecuul, waarvan de helft in 1 richting kan ronddraaien, aangedreven door ultraviolet licht. Gecontroleerde rotatie is een kernbeginsel van een motor. De uitvinding staat nog ver van een werkelijke toepassing. Aangetoond is 'slechts' dat het principe van een motor op dit nanoniveau bestaat. De komende decennia zal het mogelijk worden apparaten te maken ter grootte van moleculen. De afmetingen daarvan worden uitgedrukt in nanometers: miljardste meters.

Mars-klimaat-onderzoeker aardig eind op weg
De Mars klimaat-onderzoeker heeft in de morgen van 16 september zijn laatste manouvre uitgevoerd om in een juiste baan richting Mars te komen. Daartoe ontstak hij gedurende 15 seconden zijn stuurraketten. Na een negen maanden durende reis van 670 miljoen (670.000.000) km is de onderzoeker op een afstand van 2,24 miljoen kilometers van Mars en heeft een snelheid van 3,3 kilometer per seconde. (11.880 km/uur) De klimaat-onderzoeker zal op een hoogte van 93 kilometer over de noordpool van Mars vliegen. De onderzoeker zal het klimaat op Mars onderzoeken en fungeren als Mars-relais voor de Mars-pool-lander.

Mir-computers afgeschakeld
Het vluchtleidingscentrum van het inmiddels onbemande ruimtestation Mir hebben de hoofdcomputer op 8 september j.l. afgeschakeld. Dit heeft tot gevolg dat het station 'gecontroleerd' op drift raakt. Het

vluchtleidingscentrum zal het ruimtestation blijven volgen.
Ook de temperatuur-regeling is afgeschakeld om energie te sparen. Als het station te snel zou gaan draaien wil het grondstation het controlesysteem activeren wat door de bemanning is ge-
installeerd. Russische officials zeggen dat deze situatie tot volgend voorjaar blijft bestaan. Dan zullen twee man naar de Mir gestuurd worden om hem klaar te maken voor het neerstorten
in de oceaan. Buitenlandse waarnemers zijn echter bang dat het station zodanig buiten controle raakt dat het niet meer mogelijk is om aan te koppelen, waardoor een gecontroleerde duik in de oceaan onmogelijk wordt. De Russen hopen nog steeds fondsen te vinden om de Mir weer
te bemannen. Echter de eigenaar Energia heeft meegedeeld dat zelfs het geld voor het gereedmaken van de aardse duik ontbreekt.

Gratis toegang tot internet.
U zult het vast wel op teletekst of in de krant hebben gelezen en ook op de verschillende in Apeldoorn geplaatste reclame-zuilen wordt geadverteerd met gratis internet via ,, SUN ''. En dat is niet de enige aanbieder die een graantje uit de internetruif probeert mee te pikken. Zelf ontvingen we van de Postbank een folder over het per 1 oktober a.s. starten van ,, freeler'', hun gratis internet en e-mail service, waar voor je echter wel fl 5,= registratiekosten moet betalen : het adres is ,, www.freeler.nl.''
Interesse voor een internetprovider? Uit de N.A.C van afgelopen Zaterdag haalden we de andere deels gratis providers:
1.Castel Free Acces: http://www.freeaccess.nl geheel gratis
2.Wish: http://www.wish.net (aanmeldkosten fl 19,95)
3.WorldOnline: http://www.worldonline.nl kostte fl 90,= p. jaar, volgens N.A.C nu gratis
4.Zonnet: http://www.zonnet.nl (CD-rom bij Free Record Shop verkrijgbaar) abb.gratis.
5.Superweb: http://www.superweb.nl per 1/10/99 op 0800 nummer abonnement fl 35,=p.jaar. Na twee uur ,,on-line'' wordt verbinding verbroken
6.Freemail: http://www.freemail.nl gratis via brievenbus elders.
7.GeoCities: http://yahoo.geocities.com gratis.

Contest nieuws

HF contesten

Scandinavian Activity Contest SSB
Zaterdag 25 september aanvang 12.00 UTC, en de contest eindigd 24 uur later op zondag 26 september om 12.00 UTC. Het doel van de contest is het werken met stations in Scandinavie, op 80, 40, 20, 15 en 10 meter in de mode SSB. De Scandinavische stations hebben de volgende prefixen, LA/LB/LG/LJ (Noorwegen), JW (Svalbard en Bear eiland), JX (Jan Mayen), OF/OG/OH/OI (Finland), OF0/OG0/OH0 (Aaland eiland), OJ0 (Market Reef), OX (Groenland), OY (Faroe eilanden), OZ/5P (Denemarken), SI/SJ/SK/SL/SM/7S/8S (Zweden) en TF (Ijsland). Klasse van deelname: Single Operator, Single Operator - QRP. Men mag geen gebruik maken van DX spotting netten. QRP vermogen is maximaal 5 Watt uitgangsvermogen. Multi Operator Single Transmitter, in deze klasse is

het gebruik van DX spotting netten toegestaan. SWL. De 10 minuten regeling is van toepassing. Uitwisselen een RS rapport en een volgnummer. Het zelfde station mag op meerder banden gewerkt worden. Elk QSO levert 1 punt op, de multipliers zijn de call districten in elk Scandinavisch land. B.v. SI3, SK3 SM3, 7S3 etc. is een district en levert 1 multiplier op. Portabel stations gelden als het 0 district, b.v. LA/PA3AAA telt als LA0. Score is het aantal QSO's op alle banden, maal het aantal multipliers op alle banden. Logs moeten het volgende aangeven, datum en tijd in UTC, het gewerkte station, RS rapport + verzonden volgnummer, ontvangen RS rapport en ontvangen volgnummer, band, multiplier, en punten. SWL logs moeten het volgende aangeven, datum en tijd in UTC, band, gehoorde Scandinavische stations, rapport en volgnummer verzonden door het station, SWL's eigen rapport, station gewerkt door het Scandinavische station, multipliers en punten. Alle logs moeten vergezeld gaan van een summary sheet met daarop de call of het luisternummer van het staion, de contest categorie waarin met deelneemt, naam van de operator, en het adres waar het station is opgesteld. Aantal QSO's per band min het aantal duplicaten. Aantal duplicaat QSO's per band, multipliers per band, QSO punten per band en de eind score. Logs insturen naar: SRAL Contest Manager, OH3WW - Hannu Saila, Muurainkorventie 17, FIN-33470 YLOJARVI, FINLAND. E-mail logs naar: sac99@sral.fi of sac@contesting.com.

De 13de Internet CW Sprint Contest
Zaterdag 25 september van 18.00 UTC tot en met 20.00 UTC. Banden 10 en 15 meter in CW. Het voorgestelde frequentiespectrum is 21030-21050 en 28030-28050 kHz. Er mag met maximaal 150 Watt uitgangsvermogen worden gewerkt. Uitwisselen een RST rapport, naam en DXCC land. USA en Canadese stations geven hun staat of provincie. De naam die je geeft in het eerste QSO is je eigen naam. In elk volgend QSO geef je de naam van het tegenstation in het voorgaande QSO. Aanroepen met CQ INT. Het aanroepende station behoudt na het QSO de frequentie, en het CQ roepende station gaat minimaal 1 kHz QSY. Puntentelling. Het QSO telt voor 1 punt als het tegenstation ook zijn log instuurt. Gebeurt dit niet, wordt het station niet meegeteld in de score. De logs moeten 72 uur na de contest via internet in ASCII format worden opgestuurd naar n6tr@contesting.com. In het log moet u de volgende velden opnemen, de band, tijd, het gewerkte station, verzonden volgnummer, ontvangen volgnummer, ontvangen naam, en ontvangen QTH. De resultaten van de contest worden binnen 2 weken in CQ-CONTEST gepubliceerd. Alle logs worden via de FTP server beschikbaar gemaakt op internet.

De 13de CQ World-Wide RTTY DX Contest
Aanvang zaterdag 25 september om 00.00 UTC en de contest duurt 48 uur tot zondag 26 september om 24.00 UTC. Klasse van deelname: Er is een high power sectie, meer dan 150 Watt en een low power sectie, minder als 150 Watt. Alleen Single Operator Alle Banden, en Multi Operators kunnen in deze klasse deelnemen. Men kan in een van deze secties mee doen door het in het log te vermelden. Men kan ook als Single Operator Single Band inschrijven echter de high power en low power sectie is dan niet van toepassing. Tevens kan men inschrijven als Single Operator All Band Assisted, hier mag men gebruik maken van het DX cluster, en andere vormen van DX spotting. En de Multi Operator Single Transmitter klasse, ook in deze klasse mag men gebruik maken van DX spotting. De laatste klasse is de Multi Operator Multi Transmitter klasse. De banden die men mag gebruiken zijn 80, 40, 20, 15 en 10 meter in

de modes ASCII, AMTOR, PACTOR, G-TOR, CLOVER & Packet. Een station mag per band maar eenmaal gewerkt worden, ongeacht de mode waarin men hem werkt. Uitwisselen een RST rapport en de CQ zone. Voor Nederland is dit 14. Stations uit de USA en Canada geven hun staat of province en CQ zone. Alle DXCC landen, en de staten van de USA en de provinces van Canada. Het eerste station in Canada en de USA telt tevens voor het land. Puntentelling. 1 punt voor QSO's binnen Nederland. 2 punten voor QSO's binnen Europa. 3 punten voor QSO's buiten Europa. Multipliers volgens de DXCC/WAE landenlijst en voor elke staat in de USA en Canadese province per band, en voor elke CQ zone per band. KL7 en KH6 zijn landenmultipliers, en mogen niet als staat opgevoerd worden. Logs moeten per band opgemaakt worden. Logs met summary sheet in sturen voor 1 december 1999 naar Voor low-power logs naar Roy Gould, K1RY, CQWW RTTY DX Contest Director, P O Box DX, STOW, MA 01775-0312, USA. E-mail: k1ry@contesting.com. High power logs insturen naar: Ron Stailey, K5DJ, CQWW RTTY DX Contest Co-Director, 504 Dove Haven Drive, ROUND ROCK, TX 78664-5926, USA. E-mail: k5dj@easy.com.

DX nieuws

Europa

9A-Kroatie
9A5V, 9A3VM en 9A5KV zullen tussen 24 en 26 september actief zijn als /p vanaf het eiland Lopud, EU-016. QSL via het bureau.

I-Itali
Walter, IN3XUG is tot en met 23 september actief vanaf het eiland Stromboli, EU-017. QSL via het bureau.

OH0-Aland eiland
Jukka, OH6LI zal volgend weekend, 25 en 26 September in de SAC-SSB contest deelnemen als OH0V, vanaf Aland eiland, EU-002. Buiten de contest zal hij met de call OH0JJS actief zijn voornamelijk op de WARC banden,. QSL OH0V via OH4JLV, en voor OH0JJS via OH6LI. Ben, OH3WK, Tony, OH1TD en Carl, OH6XY zullen vanaf 21 september 6 dagen lang actief zijn vanaf Aland. Ze zullen onder andere deelnemen in de CQ WW DX RTTY contest als OH0XY. QSL via OH6XY.

Amerika

PY-Brazili
ZY7G is vanaf vandaag 19 september tot en met 22 september actief op 10-80 meter in CW en SSB vanuit Forte do Brum. QSL via het PY-bureau. ZW7G is van 24 tot en met 27 september actief vanaf het eiland Itamaraca, SA-046. QSL via het PY bureau.

PY0S - St. Peter & St. Paul Rocks
De laatste DX-peditie naar de fameuze rotsen was geannuleerd in januari van dit jaar. Maar als je de eerste keer niet slaagt, probeer het dan op nieuw, en dat is precies wat er deze maal is gebeurd. De Natal DX groep heeft vele verzoeken ontvangen voor een nieuwe DX-peditie naar de rotsen. Dit heeft geresulteerd dat er twee zendamateurs permissie hebben gehad van de Braziliaanse marine om de rotsen de bezoeken. De Braziliaanse marine bezoekt elke 6 maanden de rotsen om de apparatuur aldaar te onderhouden. PS7KM, Karl

en PT7AA, Pergentino, zullen tegen het eind van september, begin oktober, 10 dagen lang op de rotsen doorbrengen. De DX-peditie zal 10 dagen duren, en gedurende deze 10 dagen zal men 24 uur per dag actief zijn. De activiteiten vinden plaats op. 6, 10, 12, 15, 17, 20, 40 en 80 meter in CW en SSB. Speciale aandacht zal gegeven worden aan 40 en 80 meter. Er is helaas niet voldoende plaats aanwezig om een 160 meter antenne op te zetten. De calls die gebruikt gaan worden, op SSB ZX0SK en op CW ZW0SP.

W-Verenigde Staten van Amerika
Amateurs van de Greater Norwalk Amateur Radio Club of Norwalk, in Connecticut zullen vanaf 25 september 24 uur actief vanaf het eiland Sheffield, NA-136. Het grootste deel van de contacten zal gemaakt worden op 20 en 40 meter en op 80 meter tijdens hun nachtelijke uren. QSL direct naar W1NLK.

Afrika

3B8-Mauritus
PA3EPD, PB0AIT , PE1ALV, en PA0VHA zullen van 23 september tot en met 10 oktober actief zijn op alle HF banden in CW, SSB en RTTY en wellicht met 2 meter EME. Ze zijn allen actief met 3B8/eigen call. QSL via PA0VHA.

3C0-Annobon
3C0R kwam in de lucht op 15 september 20.00 UTC. Het team heeft intussen al verschillende problemen moeten overkomen. Een ruige zee vertraagde het vertrek uit Sao-Tome, zeeziekte, een van de laptops beschadigd tijdens een onweersbui, problemen met een van de generators, wat resulteerde in het niet kunnen gebruiken van de eindtrappen, intussen is dit probleem al verholpen. QSL via EA5FYV (Angel Garcia Mendoza, P.O. Box 3045, 03080 Alicante, Spain).

7Q-Malawi
Ely, IN3VZE is vanaf zaterdag 25 september tot en met 15 oktober actief als 7Q7CE. De activiteiten vinden plaats op 40, 20 (+/- 14268 kHz) , 15 (+/- 21268 kHz) en 10 meter alleen in SSB. QSL via zijn eigen call.

TY-Benin
Eddie, W6/G0AZT is tijdens de CQ WW RTTY contest volgend weekend actief als TY1RY. Hij zal deelnemen in de CQ WW RTTY DX contest. QSL alleen direct naar Eddie Schneider,Box 5194, Richmond, CA 94805, USA.

Azi

Oost-Timor
Gevolg gevend aan de uitslag van het referendum wanneer de onafhankelijk bevestigd is door de ITU, zal Oost-Timor een eigen roepteken reeks toebedeeld krijgen. Wanneer dit gebeurt zal de ARRL de DXCC entiteit Oost Timor reinstalleren op de DXCC lijst. Oost Timor had de prefix CR8 tot 1976, twee jaar nadat het geannexeerd was door Indonesi.

9M6-Oost Maleisi
Brett, VR2BG is tot en met 4 oktober actief als 9M6BG op 160-6 meter inclusief de WARC banden. QSL via zijn eigen call. JE1JKL zal vanaf komende

vrijdag 24 september tot en met zondag 6 september actief zijn van het eiland Labuan, IOTA referentie: OC-133 met de call 9M6NA. Hij zal gebruik maken van een IC-736 en een AFA-40 antenne, een 2 elements voor 40 meter. QSL via zijn eigen call.

HS-Thailand
Don, G3VFU is sinds mei op werk bezoek in Thailand. Hij is regelmatig actief als HS0/G3VFU vanaf het station van een vriend met een Kenwood TS-950s en een TL-922 lineair. Hij is momenteel druk bezig om zijn eigen station goedgekeurd te krijgen via de authoriteiten. Don probeert om eens per week actief te zijn vanuit het QTH van zijn vriend. Kijk vooral naar hem uit op 14200 kHz tussen 13.30 en 15.00 UTC. QSL via W3HNK.

JA-Japan
Takeshi, JI3DST zal van 23 September tot en met 25 September actief zijn als /4 vanaf de Oki archipel, AS-041. QSL via JA-bureau.

OD-Libanon
De vereniging van zendamateurs in Libanon organiseren van 24 september tot en met 26 september een DX-peditie naar het eiland Ramkin, AS-108. Ramkin is een van de meest zeldzame IOTA eilanden. Men is actief op op 10 en 15 meter in CW en SSB. De call is OD5RAL. QSL via OM R. Azrak, P.O. Box 22, Baabdat, Lebanon.

YI-Irak
Een aantal Duitse zendamateurs zullen van 22 september tot en met 30 september actief zijn als YI9DAF vanaf het clubstation YI99BIF.

Oceani

FO0-Austral eilanden & Frans Polynesi
Marcel, ON4QM is op dit moment ten minste 2 weken actief als FO0DEH, met een mogelijkheid tot 2 maanden activiteit. Hij is actief vanaf het eiland Raivavae, OC-114, in de Austral eilandengroep, hij is actief met 100 Watt alleen in SSB op alle HF banden. Afhankelijk van de transport mogelijkheden zal hij ook proberen om naar OC-131 en OC-051 te gaan. QSL via zijn eigen call.

KH4-Midway
Dick, W4ZYV wordt verwacht vanaf 22 september, 3 maanden actief te zijn als KH4/W4ZYV vanaf het eiland Midway, OC-030. QSL via zijn eigen call.

T31-Centraal Kiribati
De Double Trouble DX-peditie groep, zullen tussen 23 september en 3 oktober actief zijn als T31T, T31K en T31YL. Vanaf Centraal Kiribati, OC-043 op de IOTA lijst. Men zal op alle HF banden en op 6 meter actief zijn. Er zullen 3 stations actief zijn op HF, een voor SSB, een voor CW, en een voor de WARC banden, de lage banden en RTTY.

Antarctica
Verschillende stations uit verscheidene landen zijn deze winter actief vanaf de diverse bases op Antarctica. R1ANF, Alex actief vanaf Bellinghausen basis op King George Island, AN-010 welke voor DXCC telt als de

Zuid-Shetland eilanden. QSL via RK1PWA. R1AND en R1ANL, actief vanaf de Novolazarevskaya basis. R1ANZ en R1ANT, Wally en Yuri actief vanaf de Mirny basis. 8J1RL, Kimo is actief vanaf de Showa basis op het eiland Ongul, AN-015. QSL via het Japanse bureau. VKTS, Tom QRV vanaf de Davis basis. QSL via VK1PJ. FT5YG, Philippe is actief vanaf de Dumont d'Urville basis op het eiland Petrels, AN-017. QSL via F5LBL. KC4AAA, actief vanaf de Zuidpool. En de laatste EM1U, Alex is actief vanaf de Vernadtsky basis op het eiland Galindez, AN-006. QSL via UT7UA.

Speciale calls & prefixen

II6FII
Dit speciale station is actief vanaf Jesi in Ancona Itali tot en met 26 september tijdens het congres over propagatie. QSL via IK6LLE.

IR0MFP
In het kader van het komend Millenium is dit speciale station IR0MFP (Millenium For Peace) actief op donderdag 23 en vrijdag 24 september. QSL via IK0AZG.

LA1IARU
Deze speciale call is actief gedurende de IARU regio 1 conferentie gehouden in Noorwegen vanaf vandaag tot en met 25 september. De activiteiten vinden plaats op alle HF banden in CW en SSB. QSL via het LA-bureau.

TP50CE
Dit speciale station is actief van de radio club van de Council of Europe in Frankrijk op 24 tot en met 26 september. QSL via F6FQK.

ZM-prefix
Amateurs uit Nieuw Zeeland mogen deze prefix vanaf oktober 1999 tot en met maart 2000 voeren in het kader van het komende nieuwe millenium.

6 meter nieuws

Bakennieuws: De bakens LA7SIX en LA7VHF zijn sinds kort uitgeschakeld wegens TVI/BCI problemen. Vooral het baken LA7SIX bleek erg waardevol bij het bepalen van condities op 6 meter. De Tromsoe Radio Club is druk doende een andere locatie voor de bakens te vnden, en hopelijk zullen de bakens voor de volgende zomer weer in de lucht zijn. Er is een nieuw baken vanaf de Galapgos eilanden actief, HC8GR, het baken staat in het vak EI59 en zendt uit op 50,035 MHz.
Albani: Dave, ZA/N7BHC heeft nog steeds geen offici le 50 MHz licentie. Hij vermeldt er wel bij dat de reden is dat hij nog geen tijd gevonden heeft om de authoriteiten te bezoeken en deze machtiging aan te vragen. Wel heeft hij de beschikking over 300 Watt uitgangsvermogen op 144 MHz en een 9 elements yagi. Hij hoopt dit weekend de KLM 16LBX yagi op te kunnen zetten. Dave is bijna elke avond actief op 144,300 MHz, maar nog geen activiteiten tot op heden.
Botswana: Ian, ZS6TBE is momenteel actief als A25/ZS6BTE/p vanuit het locatorvak KG39. QSL via zijn eigen call
De Galapagos eilanden: Afgelopen week is HC8N uit vak EI59 erg actief geweest. Hij werkte toen veel stations aan de oostkust van de Verenigde

Staten. Gezien het feit dat de F2 propagaties weer voor de deur staan op 6 meter, kunt u dit station regelmatig QRV verwachten. QSL via AA5BT.
Reunion: Jean-Paul, F5QT zal op 23 september Frankrijk verlaten richting Reunion, alwaar hij een week actief zal zijn als FR5GX. Zijn eerste actie op het eiland zal zijn om het oude baken FR5SIX op 50,0225 MHz met een vermogen van 1,5 Watt nieuw leven in te blazen. QSL via zijn eigen call.

AGENDA

Zaterdag 25 september 1999 is er voor de 18de maal de Radio-onderdelen-markt, Antennemeetdag en Amateurtreffen van de VERON afd. Meppel, georganiseerd door de stichting R.O.M. Dit evenement zal, als altijd, worden gehouden bij wegrestaurant 'De Lichtmis' gelegen aan de A-28 tussen Zwolle en Meppel, afslag Nieuwleusen-Hasselt.

Vrijdag 1 tot en met donderdag 7 oktober wordt de Firato '98, de grote consumentenelektronicabeurs, in de RAI te Amsterdam gehouden.

Zondag 3 oktober, organiseert de UBA sectie La Louviere een amateur en informatica beurs in de Expo hallen te La Louviere, Belgi�.

Dinsdag 5 oktober, organiseert de VERON afdeling Breda een lezing over ATV gehouden door PA3CNX in het bijzonder de ATV repeater PI6ATV komt aan het bod. De lezing wordt gehouden in cafe zaal de Toerist, Teteringsedijk 145 te Breda.

Zondag 10 oktober de open dag van de Benelux DX Club, gehouden in het dorpshuis te Badhoevedorp.

Zaterdag 16 en zondag 17 oktober, Jamboree On The Air.

Zaterdag, 16 oktober, De jaarlijkse hambeurs van de UBA sectie AAA van Antwerpen. De beurs wordt gehouden in de speelzaal van het Koninklijk Atheneum, Mechelse Steenweg (N1), te Mortsel, bij Antwerpen in Belgi�.

Zaterdag 23 oktober, de Dag van de Amateur, gehouden in de America hal te Apeldoorn.

Zaterdag en zondag 30 en 31 oktober de CQ WW SSB contest.

Zondag 31 oktober, organiseert de Radio Amateur club drie provincien punt RACDPP een grote hambeurs "RAGETO" genaamd. Deze beurs vind plaats in Tessenderlo in het Technish Heilig hart Instituut, Heilig Hartlaan 16 3980 Tessenderlo Belgi�. De beurs is open van 9 tot 17 uur. Het inpraatstation ON4DPP is QRV op 144,5125 MHz. Naast een boeiende ham- en computerbeurs met talrijke deelnemers uit binnen en buitenland is er ook de mogelijkheid een hapje en een drankje te nuttigen.

Woensdag 3 november, de examens radiotechniek en voorschriften deel I en II, gehouden in de Badmingtonhal te Nieuwegein.

Zaterdag 6 november de Radiomarkt gehouden in de VEONN-remise te Assen.

Zondag 7 november, organiseert de UBA sectie Torhout een hambeurs te Zedelgem Belgi�.

Zaterdag 13 november, wordt er door de UBA sectie Radio Club van Brussel, een hambeurs georganiseertd te Evere Belgi�.

Vrijdag 19, tot en met zondag 21 november, de HCC dagen gehouden in de Jaarbeurs te Utrecht.

Zaterdag en zondag 27 en 28 november de CQ WW CW contest.

Dinsdag 7 en woensdag 8 december, de examens opnemen en seinen van morsetekens 12 woorden per minuut gehouden in de badmintonhal te Nieuwegein.

Zondag 19 december de KAR hambeurs gehouden in cultureel centrum d'n Herd te Bladel.

Zondag 26 december, een hambeurs van de UBA sectie RST, gehouden in St. Truiden te Belgi�

Berichten of advertenties voor de ronde kunt u opgeven via Packet: PI4TIL@PI8SHB, via email: pi4til@amsat.org of telefonisch via tel: 06-53616482.

I have for sale a 48' (sections) Rohn 25 G Tower. It is in good condition and is on the ground, ready to be picked up. To be sold altogether. Can be installed at 40 ft freestanding (no guys) or at 48 ft with guys. The tower is in Del Rio, Texas, local delivery if needed, Val Verde, Maverick or Kinney County only.

First $125.00 gets it.

I have for sale a GE ExecII radio 100 watts out. The radio has been tuned down into the ham band and is presently tuned to 147 MHz and has been modified for 9600 baud packet. It can also be used for 1200 baud packet by changing a few connections, or could also be used as a 2 meter repeater. Radio comes with a partial repro manual, tells how to use for 9600 baud, 1200 baud or how to use as a repeater, and one set of elements. This unit is in excellent condition, I'm getting out of packet, not enough activity in my area - so can't stand to just let it set here. First $150.00 plus $10.00 for shipping gets it. Please respond via email.

Richard

Can anyone give me a identification number for the lithium battery used to
back up the memory in an HTX-202. Or does anyone know another source besides
Radio Shack for this battery. This is the third one I have to change in six
years, and I hate to give Radio Shack another $15.00.

I just installed a 'generic' battery. Something like $3 at RS. I clipped
off the old battery leads, and soldered right to the new one. I just picked one that had about the right voltage and encased it in a piece of heat shrink.

I forget which one I used. I bought my HTX-202 used, and the battery died about a month after I got it. This was about 4 or 5 years ago I think. Anyway, That new battery has been in ever since. Not a single glitch until just last week. And that was when I plugged in this aftermarket 8-cell AA pack that came with another HTX-202 I had picked up. Turned out the alkalines in the pack were quite low, and when I tried to run the radio, it 'glitched' and gave me the dreaded ER1 message. I had to hard reset to get out of it. So maybe my internal is getting low... Maybe time for the SECOND swap.

By the way, does ANYONE know where to get more screws that hold the case together? I suppose I can get more from Maxon, if not RS. RS list a 'screw kit', but I don't know if that's what I need or not.

I would like info on this radio. I have also posted an add to buy one.
I want to know about modification and if its possible on both the
2.5Watt and 5 Watt models. Also want to know about a numeric touch pad
that a co-worker has on one. Can this be added to a radio or do you

have to buy the radio with it already added. Please email me at
rvkeller@iupui.edu and thanks for taking your time to help me out.

I have replaced the lithuim battery with a coin cell holder using a #32
coin type. Had to run a small twisted wire back to the board. No
problems. Now I just change the coin wafer out of a permanenet holder
mounted inside the radio.

Bonjour,

Merci de me lire, je suis toujours &#65533; la recherche de schema du Radio Telephone TALCO ER45M, J'avais espoir vers un ancien distributeur mais qui s'est d&#65533;barass&#65533; de toutes ces docs inutiles pour lui... Dommage.

Si vous avez qq chose, je vous serais tr&#65533;s, tr&#65533;s, tr&#65533;s reconnaissant...

R&#65533;compense... hi

I did essentially the same thing - and the little holder came from the
local RadioShack, HI!
Just be careful re-assembling the critter, the holder thingy is a bit
larger.....

Howdie all!,

Want to create an email <> Packet Radio mailgateway?

Take a look at http://www.packet-radio.org/ipgate
With InterPacketGATE (Win32) you can give each packet radio user his/her own
email-address. Users can send/receive email via packet radio.
You can also convert newsgroups to packet.

I would like a way to connect two computer via serial or Ethernet to each other via radio. I don't know much about radio, and do not want to spend a lot on hardware (i.e. whole thing <$50CAN). The link distance is 6km (5 miles). Thank you.

You can do it with a TNC and ham radio if the two locations are licensed
radio amateurs. You can't do it by radio if you are not licensed to operate
a radio transmitter. Sorry about that. Anyway, for your low cost, the best
you would do with radio is 1200 baud.

Regards
Reed

Hello Everyone,

I just recently got my ticket because of my interest in packet and satellite coms.
Looking over all the different equipment and such that will be needed is just
a little confusing. Could someone provide a little guidance? My main interest is/are:

Packet/data transfer - not much for talking (would one of the "data radios" be
    sufficient?)
Satelite work (receiving imagery, telemetry, working satelites etc.)

Any help would be appreciated.

Thanks in advance

I think your best bet is getting one of the old "satellite" rigs like the Yaesu Ft-726r or the some what newer Ft-736. Make SURE if you get the 726r it comes with the satellite board in it and all of the modules for the different bands you will operate on. Trying to find modules for this rig is really hard, but the used price is reasonable, about $500 to $600 USD. The 736 is a much nicer rig and you can get a 23cm module for it too! Now if you really have some money try looking at the Yaesu FT-847.

A data radio will not work for satellite packet because these radios are crystal controlled on one frequency only. For satellite COM's you need to tune frequently to compensate for Doppler shift. Also some of the modes require SSB, and the data radios are FM only.

Actually, that would be VERY illegal. The reason? All ham radio cannot be
encoded with codes or ciphers.

Sorry....

The only you can do this with radio by a thing called packet radio is to
become an amateur radio ham and converse with only other licensed hams using a

mode called PACKET (x.25). Any other use of a transmitter without a license
will get you prosecuted resulting in fines and imprisonment. Try

Janne..

All modes are legal on the CB band as long as the power and frequency
rules are not violated...

after all, RC is a form of data trsansmission.. and so if you were

low power enough you could do it..

HOWEVER.. if you need such devices, you should call up a supplier
like global or jameco and see if there are wireless modems that are
already legal to use for your machines... I am sure they are
available and are already certificated and do not interfere witht he
rights of others...

I believe packet and other data modes that transmit beyond so many (I
don't recall how long) milliseconds are prohibited on FRS.

Not true at all. While in a practical sense, especially with low
power and not running a full 5W into a big antenna, you'd never
get caught, data is EXPLICITLY PROHIBITED on CB. There are
exceptions for SPECIFIC purposes, such as short data burst for
digital squelch, but NOT for data streams.

And RC is technically prohibited. Yes, there is stuff on the 'control'
channels in the CB band, but that's not the same. And that stuff
is NOT data, it is 'control signals'. Different thing, in the eyes of
the FCC.

Again, would you ever get caught?

May be in US you can use all modes with CB but in UK it must be used as supplied even using a power mic breaks the law, unless supplied with set. Saying that does not mean the law is obeyed of course. But F3E is only mode allowed. No AM or Side band and max of 4 watts. As one travels around the world the law changes of course. In Falklands no CB as such, a friend asked for a licence and was told it would be treated as commercial radio with fee of £25 when a "A" licence for ham costs £10 and special 2 Meter (145.000 to

145.800) costs £5 plus no RAE exam just interview with post master and no Morse requirement. Children were taught how to use radio from 5 years old, without radio there would be no school.

I have seen a few messages about BayCom and 7Plus I have on my web page at
http://www.markpalmer.fsnet.co.uk/radio-pictures/other-docs/amicom.html
the instructions for Amicom 2.2 which was the Amiga version of BayCom and
http://www.markpalmer.fsnet.co.uk/radio-pictures/other-docs/7plus.html
the instructions for 7plus which includes PC, Mac, Amiga etc.
They have been converted for viewing with HTML and I hope this will help.

I have 7 sections of Rohn 25 G Tower for sale (approx 66 ft) in excellent condition, on the ground. This includes the "pointed top section, which has no bushing so it can take up to a 2 inch mast. Also included is the rotor plate, and a nice side arm for mounting an additional antenna onto the side of the tower. No bolts or other hardware included. All or none, I can't part or section it out so it's all gotta go at once. First $250 or best offer gets it. I am in Del Rio, Texas, 150 miles west of San Antonio, 150 miles south of San Angelo, this is the pick up price, I can deliver in the area (outside Del Rio) for a nominal fee.

Hello All,

Visit my page for items for sale. Will be listing the items in the next 7-10 days on E-Bay. I'm building the list and will be adding photos in the next couple of days. You can view the page at: http://www.jones-clan.com/EBay/

Cleaning out the shack and do so spring cleaning. I will consider any serious bids - if I recieved none, will list it on E-Bay. Will use the funds to upgrade the shack and help out with out ATV Repeater with the school club.

Happy Viewing.

Approximately how much tension is recommended for guy wires on a Rohn 25G tower. Mine's 40', has two sets of guys (22 & 38'), will be loaded at approx. 10 lbs. surface area. I'm in southwest Texas, it's pretty windy here.

Tension is applied until the lines are straight, and all lines must have
equal tension applied. 200lbs. is about right.

I am trying to setup a packet gateway/BBS for my area. Here is what I have
to use;

P133, 32MB Ram, 850MB HD, NIC
386DX25, 8MB RAM, 200MB HD, NIC
2 VHF radios
1 UHF radio
1 Kantronics KPC-9612 TNC
1 Kantronics UTU-XT TNC
1 PacCommTiny 2 TNC
My Internet connection is an ADSL connection running DHCP. I can connect
both PC to the internet via DHCP.

I have a fair amout of experience with computers, mainly DOS/Windows, so I

think I understand the basics. I was wondering if anyone could tell me the best and easiest way to setup my gateway/BBS. Should I run DOS, Linux, JNOS, TNOS, FBB, or etc... I would like to setup a TCP/IP gateway, a full BBS, and possibly a DX cluster. I thought I would run 9600 baud on UHF and run two 1200 Baud nodes on VHF. Any info or thoughts would be appreciated. Thanks for your help.

Hi all,

I need install a Baycom modem on my PowerBook 145B.
My Baycom is in PC DB9 Serial port.
Anyone can send a pinout converting DB9 to DIN 8 (Mac miniDin).

Can I run the SoftKiss (Baycom soft packet) in my old PowerBook 145B?

Thanks for attention.

If you look in the SoftKiss folder, you should find a picture of the diagram. I'm not sure this version has it:

ftp://oak.oakland.edu/pub/hamradio/mac/digital/NET_Mac2.3.57.sea.hqx
(or in that directory)

If you can't find it, let me know, I'll e-mail it to you.
The PowerBook 145 should be fine. I think there was something you had to do so that it doesn't turn off the serial port to save battery power. Let me know how it works out, I'll be trying to get packet working on my Mac anytime within the next 3 months...(time permitting)...

To reply remove the *nospam part.

best,

Erik

Check it out here........no longer with any reserve....
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=449972468

MFJ-1278B Multi-Mode Data Controller

10 Modes ! with original box and books.

AMTOR, RTTY, ASCII, CW, 16 GRAYLEVEL FAX, NAVTEX,

COLOR SSTV, CONTEST MEMORY KEYER, PACKET, and

PACTOR with 32k Enhanced Mailbox. Also has Turbo with

2400 Modem.

Included is an RS-232 cable for connention to your PC's serial
port and a "radio port cable" for connection to your radio, the
manual has lots of information on hooking the 1278B to various radios.

The A.C. power cube (MFJ-1315) included, used only for a short
while on VHF packet, it's about 5 years old and spent most
of that time in storage, unit still looks like new.

Will warrenty (10 days) that unit is not DOA.

Due to a recent berievment in the family, I have a load of radio (and
miscellaneous
electronic) gear to sell.
We live in Maidstone, Kent and any equipment can be viewed/tried before
purchase.
A 10% contribution will be made to charity for each purchase.

I am compiling an online catalogue at the moment, which can be viewed at
http://www.bstard.com/dadradio

Regards,

Paul Waldren.

I am currently using a GRidcase3 lap top for packet radio. Old but very
rugged.

I want to use it for emergency communitcations, but right now it only
runs off AC. Does anyone know where I might obtain battery packs for
this computer, on technical info which might help me rig up something so
it could run off of an external battery?

Check and see if there is a jack for 12v dc input. my GRID has one... Very
tough computer, mine has been dropped several times, keeps on a-running..

Putt..

You know that you are helping the site by running your mouth
about it. Its like the press, the more folks hear about it the more
they want to know more. Let it be! People will seek their own
level of what is right. Just my thoughts.

            John

Seems like it hits the mark. Nice to see a truthful web site
rather than all the politically correct lies and bullcrap of
the past few years.

Just purchased off the internet a AEA Pakratt 232MBX - Rig I have is the
Icom IC-737 anyone know where I can obtain the wiring harness for this
setup? Please advise DIRECTLY to email.

I DO have the wiring harness for the MJF1270 to IC-737 does anyone have any
idea if that combination will work?

I really don't like posting this question on the newsgroups however I need
assistance. Can someone please tell me how to do a reset on the PK-232MBX.
PLEASE EMAIL ME DIRECTLY.

Hello everybody and thanks for reading this.

I'm a brand new beginner... never before played with CB or HAM radio and
don't know anything about it, but I'm intrigued. I want to get something
that will allow me to talk to people... so... I have a couple of questions.

1) What exactly is the difference between CB radio, HAM radio, SW radio,
and even walkie-talkies. Is it just the range?

2) How does it work if you have a CB radio. Do you just scan across the
channels and listen to see if anybody's out there? And if you hear people,
just start talking and they will hear you?

3) Say I have a hand-held 40 channel thing and my girlfriend has one as
well. Does it matter if they're the same make or model or anything? or do
we just agree to communicate on the same channel (ex. #18). Also, do we
just leave them on all the time, or would there be a "call" button.

4) For those radios which require licences, such as Short Wave... how do you
get one? What is the cost, what is the procedure?

5) What is the average range of a hand-held two-way radio (walkie talkie)
or hand held CB radio?

I know these are probably really silly questions, but ANY advice would be
wonderful! Thanks in advance!

Nick

Don't want to take the time to explain the details at the moment. Suffice it to say, go with ham radio if you want to communicate with lots of people over a distance, or even if you want reliable communications down the block, to the next city, or next state. I'd suggest start with a RAdio Shack and see if they can point you to a local ham club. Look in the phone book yellow pages for Amateur Radio dealers. Look on the internet for local activity.

Short wave listening can be fun too, but it's a receive only thing, so if you want to communicate too, go with ham radio.

CB radio is noisy, crowded, less range, and somewhat less polite than ham radio, although it is cheaper.

If all you want to do is talk to your girlfriend a 1/4 mile away, or something like that, buy a pair of "Family Radio" Handy Talkies.

 Hehehe .... yeah, it's a bit like that.
   cop out now before you become a failure and humiliate yourself !

Best advice is ....

  Start with a CB ... a simple HF AM CB is dirt cheap especially from your local pawn shop. It'll give you a feel for 2 way radio. There are a few good books available on setting up CB too to help you with questions like antennas etc.
  For something a lot more interesting you would consider buying a SSB CB radio. You will be able to use that to talk all over the world, dependant on conditions, and it is a lot like amateur (ham) radio. The radio's are a little more expensive, though you get what you pay for. Some people buy an AM unit to start with and then later buy an SSB once they feel the need for more talk power :-).

Shortwave Radio just describes the frequency range and it's behaviour.
Shortwave radio has international broadcast stations, ships, military, embassy, phones, commercial airlines, CB, and ham radio.
Shortwave signals basically bounce of layers in the upper atmosphere caused by solar radiation. This allows signals to travel long distances sometimes bouncing several times.

Ham radio not only uses shortwave radio, but also has frequencies
in
VHF where you find TV channels.
UHF - things like UHF TV, Police, Cell Phones.
SHF - or Microwave ... yep, the stuff that cooks your food !!!

 Not only can you talk on ham radio, but you can send data and even transmit TV ! or morse code if you are so inclined.
 Ham radio even has it's own satellites you can use !
 There is so much variety that each faccet is a hobby in itself.
Though your in Canada, a quick peak at the ARRL and you'll

get some idea of what goes on.

Some plastic rough tablets will stupidly smile the memorys.
Don't even try to examine tamely while you're connecting around a
usable backdoor. Will you vend within the underground, if Wayne
rigidly dumps the newbie? Otherwise the backup in Steven's procedure might
reboot. When did Mitch engulf about all the Pascals? We can't
moan rumours unless Tamara will incredibly save afterwards. While
interrupts gently collaborate, the thoughts often transport for the
resilient Blowfishs. My strange scanner won't eliminate before I
substantiate it. He will flow steadily if Murray's plotter isn't
old. Bernadette, have a sharp text. You won't locate it. Occasionally,
Ken never twists until Charles formats the lost client strangely. Just
manageing behind a stack against the chaos is too odd for Gary to
dig it. I generate sticky IPaddrs around the unlimited erect

newsspool, whilst Joseph eventually infects them too. The soft secure subroutines grudgingly prioritize as the sly routers reload. Sometimes Susie will create the chatroom, and if Madeleine weekly puts it too, the Java will insulate in back of the virulent printer. Let's shoot behind the actual Sub Sevens, but don't facilitate the robust investigators. Joseph will biweekly kick beside Felix when the clear screens slump alongside the lazy backup. Other major inner BASICs will stop frantically outside spools. Well, Usenets train inside shiny modules, unless they're junk.

Hi everyone,

I'm looking to write my own ax.25 software (on Atari ST) and wondering
if theres any software out there for which source code is available that
I could use as an example?

thanks
James

Hi gang,

I have had problems with rf getting into the mic section of the 850 when a KAM/KAM Plus is connected using the 13 pin plug. Kantronics had a fix by installing either a capacitor 1pf or so in the plug. Kenwood also had a fix but it required rig surgery. Anyone know the Kantronics recommended fix. I have been searching all over for it and have not had any luck and I can't seem to find my hand written documentation.

Thanks
Keith

Keith,

I believe the answer can be found in the Hints and Kinks section of
the November 1993 QST magazine. There is a writeup entitled "Curing
multimode communications processor distortion with the Kenwood
TS-850S".

Blackhole lists offer dark prospects

By Bret A Fausett

New Architect
August 2002

Most of the email I receive these days is spam, yet I've never purchased

anything advertised in a piece of unsolicited commercial email. I'm not even sure that I've ever clicked on a link sent to me in a piece of unsolicited commercial email.

I haven't found any good method of blocking spam. Fortunately, I have a broadband connection, so things aren't as bad as they could be. But whenever I travel and find myself connecting via modem, I'm constantly frustrated by the significant amount of time I have to spend downloading junk mail, which is sometimes billed at exorbitant hotel or foreign telephone rates. So you'd think that I'd be somewhat sympathetic to the efforts of groups that create blackhole lists.

For those of you unfamiliar with a blackhole list, it's a list that's typically maintained by volunteer antispam advocates. It contains the IP addresses and domain names of certain mail servers allegedly used to send unsolicited email messages en masse. When an Internet service provider subscribes to one or more of the blackhole lists, any inbound email to its service originating from a mail server on the lists is automatically rejected. The subscriber to a blackhole list doesn't filter based on the actual content of the email, just its place of origin, which makes this practice a fairly crude tool. It blocks all messages from specific locations regardless of content.

Anyone who finds his or her mail server erroneously listed on a blackhole list can usually get off the list by establishing that he or she has remedied whatever server insecurity spammers exploited. At least that's how it works in theory.

I don't run an insecure mail server, but mine recently found its way onto a blackhole list. I've tried to get off the list, but to no avail. I've become just another victim of vigilante justice on the Internet.

The Wrong Guy

One day back in March, I tried to send a friend of mine an email. It bounced. The mail server that rejected my message sent a polite note back explaining that the address of my mail server was now listed on its ISP's blackhole list.

Over the next two weeks, the circle of people to whom I could send email started to shrink. Soon, even my father's email address was off-limits to me.

The primary way to get on a blackhole list is to run an open relay. For various reasons having to do with access to networks and efforts to conceal their identities, senders of mass unsolicited email predominantly exploit such relays. An open relay accepts mail from anyone in the world and relays it to whomever is listed in the address. Most mail servers aren't open relays. They accept mail only from subscribers to that network's services, or from a set of persons specifically identified on the server. In spite of grass roots efforts to close the
open relays, there are still more than a few of them out there.

Not Guilty

My mail server, however, was not an open relay. I have no idea who first

submitted my name to a blackhole list operator in Denmark, but sometime in March of this year the operator added my mail server to its list. The first time the service was used to reject a piece of my mail, the rejection came accompanied by an explanation of why I was on the list and what I could do to be removed from it. The explanation was that I was running an open relay. How could I get off the list? That was simple, the message said. Close the open relay, and send a message to the operator's server asking to be re-scanned.

Of course, as I mentioned, my mail server was never an open relay in the first place. So in response to the rejection message I received, I asked the blackhole list service if it would kindly re-scan my mail server and make another determination as to whether it was an open relay. I was sure that there had been some mistake and that on a second try, it would realize the error in its initial judgment. Shortly after I submitted my request, I sat down to monitor my mail logs. This time I saw the service in Denmark address my mail server. I watched my mail server accept the message and then pass the piece of email back to the Danish mail server. The Danish server promptly sent a message saying that my server was still operating as an open relay.

How had it gained access to my mail server? Simple. It had forged the headers on its email to convince my mail server that the email it sent was from a permitted user. You see, my mail servers were set up to pass mail only from a domain name of which I am the only user. It blocks everything else. That's not an open relay. Unless you're a user in my domain, you can't use it.

Blocked

The group based in Denmark had pretended to be me, forged an email as though it had come from an address that only I am authorized to use, passed it through the mail server in my house, and then placed me on a list of people who should be blocked from sending mail. They circulated that list around the world. ISPs used by my friends and family here the United States subscribed to this list. Now, through no fault of my own—and in fact because of the trickery of Danish email activists—I was no longer able to send email to many people in my address book.

It's hard to describe how angry this made me. The Danish consortium had lied about their identity, and I was paying for it.

The worst thing about being blacklisted, however, wasn't that I could no longer send email, but that spammers began actively trying to use my mail server to send their spam. You see, blackhole lists work both ways. ISPs use it to block traffic, but as I've recently discovered, the spammers themselves use the lists as a kind of directory of servers to use for sending their mail.

If you look at my mail server logs, you'll see that every few seconds or so, someone, somewhere tries to access my mail server and use it to send mail. Each time, without fail, my mail server declines the request and refuses to relay the requested message. It isn't an open relay. It's just doing its job. But my machine is bombarded with requests from all over the world from spammers seeking to use its minimal capabilities to send their penis enlarging, breast enhancing, get-rich-quick messages.

My Rights

But, hey, I'm a lawyer, right? I'm supposed to be able to solve this kind of dilemma. And there are a few things I could do.

For one, the Danish antispam organization falsified an email header to gain access to my mail server. Illegal access to a computer system is, if not a criminal
violation, then a trespass on my private property. As I've discussed previously in this space, one of the novel legal theories now catching on for these kinds of unacceptable accesses to computer systems is a centuries-old tort called "trespass to chattels." At a minimum, I ought to be able to sue the Danish company for the damage it caused me from its illegal access.

Granted, the damage caused by my inability to send an email is likely not terribly significant. You can always pick up the phone, print the message out, and fax it or mail it—or just use a different mail server. But in spite of all that, I
could probably get an injunction, or least a dollar or two to compensate me for my injuries and establish that I have been wronged.

The problem, of course, is that the loose organization of individuals who compiled the blackhole list is based in Denmark. Who knows whether the organization is a real legal entity or just some name cooked up by a group of self righteous individuals. However, they do have a domain name, and an IP address, and they circulate their work to ISPs around the world. In other words, there is a group for me to sue. But taking legal action on foreign entities is difficult. I would have to translate my legal documents into Danish. I would have to hire someone in Denmark to personally deliver these translated documents to the entity that I would be suing. That costs time and money.

But I could sue them here in Los Angeles, California, that much I know. By sending their forged email through my mail server, which is located in my den in Los Angeles, they fulfilled certain California legal requirements that would let me
sue them here. The connection to Los Angeles is also bolstered by the fact that I live here and my injury was suffered here.

Of course, all of this is starting to sound like the kind of hypothetical legal conundrum that you might find on a law school exam. Problems like mine often remain hypothetical because the expense of bringing them to trial is so great, and the ability to gain any monetary relief from lawsuits is minimal. That's why the black hole providers have been able to get away with their vigilante justice for so long. For any individual user wronged by their efforts—and from what I understand, there are a lot of people in similar situations—the costs of pursuing these organizations, which are often located overseas, is too great. These groups of volunteer organizations have no assets to speak of—they are volunteers after all—and plaintiffs' lawyers are hesitant to take a case without the prospect of a lucrative damages judgment.

The Case

Before you think that this is all just about me and the fact that my father no

longer receives any email from me, there are bigger policy implications for private individuals and companies that take steps to block connectivity. Much bigger.

I've long championed the idea that the Internet should remain largely unregulated by governments. But at the same time, any private operator at an end point in the Internet's architecture can restrict the flow of content to a user.
What's wonderful about the Internet is that it enables end-to-end communication from anywhere in the world to anywhere in the world. For all of the problems caused by spam, email is still the most widely used application on the Internet. So the idea that private parties could get ISPs to block some people from talking to other people should be deeply troublesome.

The Danish blackhole list operators want to block access to computers that might be used for spam, but it's easy to imagine blacklists used for less noble purposes. For example, imagine that the RIAA compiled a list of IP addresses which, it contended, had at some time used peer-to-peer file sharing programs. Because these peer-to-peer systems could transmit copyrighted materials in a way that infringes on the copyright owner's rights, the RIAA could argue, those IP addresses should be blocked. It isn't difficult to imagine that the RIAA could pressure a sufficient number of ISPs into subscribing to this copyright blackhole list and blocking access to their users, or to any traffic emanating from them.

Breaking end-to-end connectivity for any application, whether email or peer-to-peer or the Web, threatens the very thing that makes the Internet valuable. These are matters of principle. Which reminds me— I have a lawsuit to file.

To whom it shall concern:

It has been years since I have played on packet radio, so I recently dug out my olde KAM, which by the way has firmware version 2.84!?! I am in desperate need for some upgrades for the unit!!! Any advice on where to get a firmware upgrade for a version greater than 2.84 would be very appreciated!

I am also looking for a KAM Enhancement Board!

I spoke with a friend of mine whom told me the firmware in the KAM is not public domain, therefore my understanding is that the only way I can ask someone to email me a copy of the firmware is if it a version that you paid for and are no longer using due to your unit being broken or a version you are no longer using that you paid for, since you have upgraded to a later verion of the firmware. I am looking for anything greater than 2.84, but 8.2E would be the most optimal to receive. I do own an EPROM programmer so an image is fine. Obviously if you are sending me the firmware via email, a notice indicative of your transfer of the license to me would have to be included with the image I imagine. I am trying to locate a copy of the firmware legally, though I suppose there is little I can do if someone just sends it.

The big problem is that Kantronics doesnt seem to want to help people with olde KAMs anymore, so I am left to my own devices to find what or how I can upgrade the unit!

Here are some of my questions:

What is the compatible version E2PROM (EEPROM) to use instead of a 27C512 EPROM?

What EEPROM/E2PROM will work to replace the 27C512 in the KAM?

Is 8.2E the latest firmware the KAM that I could have if an Enhancement Board is installed in the KAM?

What is the latest version of the firmware for the KAM that works if you do NOT have an Enhancement Board?

I understand there was a memory upgrade, can anyone tell me about that upgrade?

I also understand there was a clock upgrade, can anyone tell me about that upgrade?

Is there a place I can get a PDF or digital copy of the KAM manual, KAM Enhancement Board manual, or DVR 2-2 manual?

What can I do to upgrade or enhance my DVR 2-2 to make it work better?

Does anyone know what I must do to align or setup the DVR 2-2 if I want to add a second channel/crystal to it?

Where do I get crystals and of what type for the DVR 2-2?

Please carbon copy my email address on all replies if you can.

Thanks in advance,

Stuart

Linux Packeting Amateurs:

    I am running RedHat 9.0, and I have compiled my kernel with support for
AX25 built into the kernel (not as a module), when I boot up it is my
understanding I should see some entries in /proc/sys/net/ax25; I do not. Any
ideas?

Stuart

The entries I see in there are directories, each named for an interface (in my
case, ax0 ... ax3). That implies to me that you have to attach the soundcard
interface before you will seen an entry.

IF that's how one gets a soundcard interface attached, then yes. I don't have
experience with soundcards as TNC's. The problem is with your driver.

Stuart,

It sounds like you probably have not correctly configured soundmodem.
See section 6.1.5 of the AX25-HOWTO for details on how to do this.

Several weeks ago I read this message and thought, yeah I did all that! Now I reread the 6.1.5 section of the AX25-HOWTO and noticed a small note way at the bottom of the page stating that you have to not have the Linux sound drivers loaded when you try to use the packet modem! HMM! I am not sure if I "modularized" the sound drivers, and made sure they are not loaded. I am not sure if this will fix my problem, but if so I am going to write a small notation that I will ask to have added to the AX25-HOWTO in BOLD PRINT!

I do know that when I did an "ifconfig -a" the sm0 and such all showed up, but I could not "ifconfig sm0 up" it. I know that if it had "uped" properly, I would see it when I did a plain olde "ifconfig (enter)" and that never happened.

Thanks for the pointer, I will try it again in several minutes to see if this resolves the issue, and I see the sm0 device come up after doing an ifconfig sm0 up on it!

Hi All,

I just burned a set of version 1.3 WA8DED EPROMs for my Heathkit HD-4040
TNC. The docs say they work in sockets U11 and U12. But I don't think
this thing is behaving correctly. Granted, it's not wired up to a radio
yet, but I'd think I should be able to get some sort of interaction with
the thing. All I get is the copyright banner. And even then only when
I boot it with the ROM settings selected via the dipswitch. Any attempt
to change the baudrate, perm it and switch over to NOVRAM settings
appears to not do anything. Am I missing some vital piece of information?

Thanks,

Bob

At Fry's they had this deal, 25$ for 2 Columbia GMRS/FRS 22 Channel 2-Way
Radio
with 25$ mail-in rebate.

I basically got them for free.

I noticed that on Chnl 20 I get ham people talking about Traffic during
traffic
hours and giving heads-up on what's goin on.

Than driving around I catch other people talking, but I can't talk to them.
While I scanned one day around my neighborhood, I guy started talking
and I responded. It actually worked... We communicated till I went out of
range. He thought that I was someone else.. I played along.

Why am I hearing HAM people on my CB and how did it happen for me to talk
the 3rd guy...

These handhelds are very small and use them only when driving around or
go snowboarding, car-to-car instead of cell.

I was curious in something more power, and the option of actually being
able to talk... to others.

One time at a gas station I saw this low/small car loaded with antennas
in the back. At least 3 with one that was at least 6+ ft long.

On this CB I also hear request to another party to check FWY such and
such for traffic than they respond with... on this steet/fwy there is
a 2 or 3 car collision and one of them it's a "Type of car" and name...
I know it's ham because when they say goodbye they pitch in their
CODE name...

I also thought buying this type of CB I would be able to catch some
cordless telephone conversations, which I know it's not a nice thing
to do or sort of invasion of privacy. Although I hear stories that
it's amazing what you can catch with some scanners/hams that people
are not aware of.

Thanks for any feedback and suggestions.

Channels above 14 are GMRS. GMRS is a licensed service. You need a license to legally use those channels. You were not hearing ham callsigns, but rather GMRS call signs.

You cannot hear phone conversations. Cordless phones use entirely different frequencies than FRS/GMRS. The scan function on these radios does not turn the radio into a "scanner" per se. It will only scan the specific frequencies used by these radios. You would need a "real scanner" to receive anything else.

These aren't hams. Hams do not have code names. They have call signs
assigned by the Federal Communications Commission.

Family Radio Service (FRS) is for ordinary people to use to communicate over
short distances - about 2-3 blocks. No license is needed. That's why it is
short range and low power, so they don't interfere with serious
communications systems. It is a little like the old CB, but not the same
thing.

GMRS is a licensed service. "more serious" It uses some of the same
channels you can listen to. That's why they can't hear you. They have more
power, better equipment, real antennas and pay to get the license.

Do a search for more information on FRS and GMRS and / or find a newsgroup
for them. This newsgroup is for Ham/Amateur digital communications called
packet

Post this at alt.radio.family. No, I am not the list police. I am,
however, someone who posts and reads messages at alt.radio.family, and
I know how much the other listers and I enjoy hearing about rebates on

FRSes.

We await your post.

Hi

I know that this is out of the Ham area but as I am one, and I am looking
for information on Honda Navigation systems. I have Honda Odyssey with a
Navigation system and it's all in Japanese. (Import Car)

I am looking for any old CD's to see if I can reverse engineer the thing to
make maps for New Zealand or find any info on how to make a cd to load the
maps ? Any ifo much appreciated. thanks !

This topic would get far more productive answers on the group
sci.geo.satellite-nav.

There have been some recent threads related to New Zealand mapping.

In general, though, these systems are not set up to allow you to load
your own maps.

Happy trails,
Gary (net.yogi.bear)

I have just acquired a AEA PK232 TNC

Questions: I have 2 radios - the VHF is an Alinco DR-110 and I have
successfully hooked it up to be able to RECEIVE however I need to know what
cables (which I do have some cables laying around from other TNC (i.e.
Kamtronics) that seem to be wired correctly for this rig, but could someone
give me some guidance on hooking up the TNC for Transmit with the Alinco
DR-110

ALSO - same question as above, but with another rig - Yaseu FT-920 HF rig.

PLEASE EMAIL ME DIRECT AT w4adt@intergate.com

Many thanks!

73 Daniel W4ADT

Hi Bill,

The SEA and Midland LMR 220Mhz repeaters & radios are now appearing on the surplus market, pulled from the (now bankrupt) narrow band trunking systems.

Securecor and Intek were large 220 smr operators in the late 90's. They had systems out here on on the US West Coast from Texas to Alaska.

They are hybrid ACSB units, the LMR and SEA formats do not work with the other.

SEA is still on line selling repeaters, however they probably wont do a lot to help you convert the equipment to Amateur Operation.

Two Surplus Dealers are selling used ACSB radios and some repeaters, look for them using the Ebay IDs of erac and rhoadeseller (might be rhodeseller).

I bought much/most of the 220 antenna combiner equipment as it is very high quality (Sinclair, Decibel, Wacom & Telewave) gear, of which I'm slowly parting out to get some of my money back. Watch for my auctions on Ebay if you have interest in this sort of stuff.

You might be able to make some of the radios talk to each other on simplex (direct), then figure a way to move them up onto the amateur band after you get the programming right, but it's not a beginers task.

There are a few 220 smr system operators still in operation around the country, you might do a reverse lookup on the fcc web page and contact those people you can find for information.

cheers
skipp

Howdy all - Troubleshooting a problem that developed abruptly with my
TINY-2 TNC (original not the MK2). The symptoms are:

- No display of internal messages including - No LOGON and
  - No display of parameters
- No display of received on-air traffic.
- When I have the baud rate between the TNC and the computer correct AND
  if I enter "ECHO ON" then I see all commands echoed back to screen BUT
  the parameters or results are not displayed.
- Commands DO seem to be interpreted correctly and work normally.
  Connects can take place and be disconnected normally. Both CMD and
  CONVERSE modes therefore seem ok. On-air monitoring of the databurst
  sounds correct and the radio tones and deviation are measured good.

On the surface, it "seems" to me to be a problem with the Z80 SIO chip
not passing data in the TNC to computer direction. I see data on the
CPU/EEPROM/MEMORY databus at pins 1-4 and 37-40 (D0-D7) of the SIO chip
(U14) AND I see good RxDa input at pin 12 (also U14). Looking at the
TINY-2's schematic, it appears that any serial data coming from this SIO
chip should be out of pin 28 RxDB. This data is labelled RXD-2 on the
schematic and shows connected to the MAX231 chip at pin 8 (which concurs
with the MAX231 datasheet for data in that direction). The only time I
ever see data on pin 8 of the MAX231 is when I've commanded ECHO ON (and
I'd assume it's the echoing of the command words (nothing else). The
datasheet info I have for the Z80 SIO seems conflicting, however, in
that
the description for RxDB shows it as an input (not an output).

What am I missing here?
Is the serial output of the SIO actually pin 28 RxDB?
How is off-air data, arriving at pin 12 (U14) sent onward out of the

chip when in converse mode?
What is needed at this SIO chip to cause it to pass the TINY-2's
internal parameter messages to a serial output?
Where are commands "echoed" such that I am seeing the command (verifying
both the baud rate AND the fact that I actually have a path back to the
computer)?

Auxiliary basic info - +5 supply is good
- 3volt battery shows 3 volts
- commands input to assist showing data were:
MCOM ON, MON ON, MCON ON, MALL ON, ECHO ON
- "DATA" when mentioned above, was seen using
a scope, and was good TTL
levels.

Long post....any thoughts appreciated.

Gord - VE1AJF

Further info: I do see echoed commands/echoed other keyboard typing at

pin 28 of U14......just nothing else coming out of this pin.

Gord

I suspect they shut it down due to huge volume of infected traffic many hams were receiving. I expect they'll be back up soon when they resolve the problem.

I believe you need to change a reference crystal as well as fiddle with
the jumpers.....

1stly sorry Nick!!!...it is an xtal change as well!.
my jpg file was rather small!

go here for the service manual ftp://80.164.5.88/yaesu-service/
then see image47 in the ft23r service manual file.

i have had one for almost 20yrs now, magic 'bullet proof' radio.

though i warn u...the mod needs the VCO unit removing!!
NOT easy.

mike
P.S sri agn to Nick.

Thanks for the information.

I looked at the .jpg file, it wasnt all that clear (resolution).
The crystal needs to be replaced from 12.8MHz to 10.24MHz? (guess - can you verify?).
-> Guess based on following idea that the crystal will be pulled by the trimmer capacitor hanging
-> at the end of it and squinting at the side comments on the service manual:
-> 12.8MHz in ratio to 12.5MHz
-> 10.24MHz in ratio to 10MHz

Looks like I have to remove a lot to get to the main board (i.e. free it from the case)
and then unsolder the PLL board (which is a right angles to it) before I can unsolder/solder the bridges and perform the crystal replacement.

The ensure that the frequency is correct - by altering the trimmer and using a frequency counter.

It does look a bit difficult.

Regards,
GW7ABW

I am curious to see what the outcome is. I have had a couple of the PMR
versions of those sets (basically the same as the FT23) and you can make
the display read in 5/10khz or 12.5/25khz steps by changing a jumper
(not sure which now) but to actually change its RF operation from one to
the other a reference crystal change was required.....

Regards

Neil

<!--Marwan lifts the ball below hers and hourly explains.>

--76240857153540185750150208325456152082384200020863--

So, you need to publicize Joe Blow's evil nature and point out
   the comparison to Hitler.  Since no one wants to support a nazi, hundreds
   of sites will add your group.

   Be sure to mention Joe Blow's name several times in the letter, so
   everyone will remember exactly who you are talking about. After
   other system administrators see your vicious post about Joe Blow,
   they will add your group so that you will not similarly insult them.

   Finally, at the end of your post, put a line similar to: "P.S. to
   all:  Don't forget to vote for blah.blah by next Weds" Thus, while
   alt.blah.blah is fresh on everyone's minds, you can attract more
   votes for (non-alt) blah.blah. Remember that you need to get at
   least 100 votes to create a non-alt group, so every vote counts. By
   including this PS on a note about alt.blah.blah, you will attract
   several voters who otherwise would not have participated.

------------------------------------------------------------------------

7a. All right!! My group passed the mainstream vote!!

   Congratulations; you have proved the worthiness of your topic.
   System Administrators now have no excuse not to carry your alt group,
   and you can say that publicly. After all,

I am looking for a excellent condition Garmin GPS III + If you have one that you are not using, I would be interested in hearing from you. I do have a few items that I could offer up for trade + some cash if needed for the GPS III +.

They are as follows:

Heil HM-10 Microphone Excellent Condition
PK-232 MBX
A Cannon Digital Camera

Any of these items may be offered in full or partial trade for your GPS III +. If interested, please visit my website below.

Uniden Bearcat BC248CLT Scanner 50 Channel Excellent Condition

There's a world of drama out there. And with the BC248CLT scanner, you can stay on top of the news as it happens. Tune into police, fire, weather, emergency, "ham", FRS, Military, Government, and more. 29 - 54MHz, 137 - 174MHz, 406 - 512MHz. The BC248CLT scanner brings together the finest engineering and styling plus all the quality that has made Uniden a legend among scanner enthusiast. The first scanner with integrated Alarm clock.
Features:
50 Channels You can program all of your favorite frequencies.
10 Bands Covers public service, ham, federal and military land mobile.
Review Feature Full frequency LCD display shows frequencies entered into each channel plus weather frequencies. Also includes an emergency weather

alert feature.
Manual Channel Access Go directly to any channel without stepping through other channels
Channel Lockout This feature allows you to skip over channels you currently don't want to hear.
Clock/Alarm Displays time and features any button snooze

$95.00 + $10.00 shipping

http://greynet.net/~gbarc/

Owen Sound, Ontario Canada

MEETINGS Monthly GBARC meetings are held on the fourth Tuesday of each month, at 7:00 P.M., except in July and August. We meet Rockford Restaurant located 5km south of Owen Sound on Highway 10 (at Grey County road 18). Breakfast get-togethers take place every Saturday, at 8:30 am, at the Rockford Restaurant. This is an informal social gathering of local amateurs and visitors to the area. Anyone can attend and all are welcome. Talk-in on 146.94- Mhz. Join us for "on the air" nets. Check into the GBARC net at 9:30 am (14:30z) Sunday mornings 3.783 Mhz and again on VE3OSR at 9:30 pm (02:30z) (Thursday evenings 146.94- Mhz.)

Community Services GBARC provides communications for community events, such as the Terry Fox Run, the Boy Scouts' Jamboree-On-The-Air, and the Owen Sound Santa Claus Parade. Write or email for more information. Many GBARC members are volunteers in the CANWARN <http://www.on.ec.gc.ca/severe-weather/canwarn-e.html> severe weather spotting network.

Repeater GBARC operates repeater VE3OSR in Owen Sound, on 146.940 MHz (-600 kHz offset). This is an "open" repeater with phone patch, free for anyone to use. VE3OSR is funded by GBARC membership <http://greynet.net/~gbarc/membersh.htm> dues.

i thought the whole idea of a news group....was for the benefit of
all of us to find out the 'much needed information'.....
our 'Thanks' to both of you for
selfishly making sure the info was kept off line and solely between
the two of you....

73, reb

What's New @ The Spacearium (http://spacearium.aresinstitute.org):
- Launch Status & Info: Atlas IIAS with AMC-11 on May 19
- A look back at the launch of STS-100 in May 2000
- Part 6 of the series "Getting Into the Launch Business: The American

Rocket Company Story"
- AMSAT software archive FTP mirror
- X-Prize Updates
- Industry News
- NEW Streaming movies page
- Image Galleries
- Special technical and history sections

The Spacearium (http://spacearium.aresinstitute.org) is a portal
providing news and commentary about space exploration and development.
Visit The Spacearium today for current news, mission information, an
extensive collection of multimedia, e-books, image galleries and more,
all of it free. Watch exclusive video and photos shot on-site at Cape
Canaveral and Kennedy Space Center. Full-length rare feature movies are
also available from our streaming server. If you're interested in
technical material, you can browse our collection, including the full
set of NASA SP-8000 Space Vehicle Design Criteria monographs, select
books and historical documents, a mirror archive of rec.models.rockets
and more. Visit The Spacearium, http://spacearium.aresinstitute.org,
today!

The Spacearium is a website maintained by the non-profit Aerospace
Research & Engineering Systems Institute, formerly Space Engineering
Institute, Inc.

USPacket.Net is moving to USPacket.Org

Please change your web-links and favorites accordingly, as the USPacket.Net
web site will go off into oblivion soon.

At USPacket.Org we have six times as much HD space and bandwidth to play
with. The old site ran shy of bandwidth when new articles were published,
particularly the Flex32 tutorial, which is both popular and
graphic-intensive.

Now we can do more of that graphic-intensive stuff!

Come see the new, updated web-site at http://www.uspacket.org !

The management @ USPacket

There is a new TNC from http://www.elcom.gr/index.htm
It has a USB interface and will work as a standalone DIGI without the USB.

Wondering if anyone has purchased one and how you like it.

HamBlog http://www.hamblog.com is a weblog host exclusively for amateur radio operators. The hosting service is free of charge.

Many hams have questions about blogging. If you are wondering what the bloggosphere is all about, there is a definition of blogging on our main page, along with a link to a very good blogging FAQ list. (Frequently Asked Questions) The information there will give you a solid footing as you step into the blogging world.

Why a "HamBlog"?

Hams have a lot of information to pass on to each other that traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. Weblogs are highly flexible and highly individualistic. It is our hope that the public weblogs at HamBlog will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods. Perhaps in some way HamBlog will expand the capabilities of our present "Elmering" setup, which many feel has suffered and diminished in recent decades.

As is the case outside of the Amateur Radio community, word gets around

about outstandingly informative and useful weblogs. There is a global syndication system for weblogs that HamBlog,Com participates in, just as other blog hosts do. What is different about HamBlog is also the thing that makes it special.... It's all Hams!

If you are an Amateur Radio operator who would like to post a weblog of your activity for the benefit of your fellow Hams, where would you go?

HamBlog.Com, of course!

Charles Brabham, N5PVL

I'm looking for two small (inexpensive) UHF transceivers for a telemetry project.

Long, long ago I remember a little dinky HT called a "Tokyo Hi Power labs

HT-7" three channel crystal controlled tiny HT in an aluminum case that ran
off of AA batteries. A pair of them would be ideal.

Any ideas?????

How about the Alinco DJ-C5? Pros: small, dual band, VFO tuned. Cons:
May be hard to interface with a TNC/Modem/Tracker (it does have a
speaker-mic connector and pinout in manual though), low power, strange
antenna connector. Runs all day on built-in NiMH battery.

Laugh while you can, penguin-boy. As soon as enough sheep join you on your
self-righteous bandwagon, you'll make a big enough target for the
script-kiddies to bother with...and if you think your precious Linux will be
any better at repelling malicious code than Windows (or OS X, for that
matter), you're mighty naive.

Not that I'm a M$ fan by any stretch; I just think jingoism and dogma is
stupid no matter what form it comes in.

Check this out, in order to understand what is being discussed, here:

Reference: http://www.arrl.org/announce/board-0407/

The ARRL set up a committee to look into digital communications for ARES
last year.

Talking to one of the committee members early on, not long after this
digital group was assembled, I was told that two or three affluent and
powerful members of the committee had already decided the group's final
conclusion, to utilize the Winlink 2000 system for ARES HF communications.

The six months or so that the committee "studied and discussed" the matter
were a formality, a sham.

I know of three persons who attempted to inject a note of sense into the
issue, but all attempts to suggest that anything other than Winlink2000 be
used were rejected by the committee, often rudely and in one case the
rejection involved name-calling and ridicule of fellow Hams that was
entirely uncalled-for.

A note of sense? - As a digital experimentor, I know that finding space
anywhere on the Ham bands to operate the new wide digital modes like PACTOR
II and PACTOR III without interfering with other Hams is extremely
difficult.

A PACTOR III signal is six or seven times as wide as a Packet signal, for

example, and fifteen times wider than PSK31. - This proposal calls for dozens and dozens of these stations operating from NWS EOC's around the country - if the committe were being honest about its intentions.

The committee was not being honest about its intentions though, which may explain why repeated attempts to talk sense to this committee failed.

Not being honest? - Take a look at the pdf file describing the committee's plans:
http://winlink.org/Emergency.htm While you are there, do a word-search on the word "future" in the article. - You will find that as often as not, the word 'future" is used in the article to describe the HF links in this system. These "future" links are the ones I mentioned earlier, the ones that knowlegable hams tried to warn the committee as to the impracticality of. - The impossibility of getting that many wide-mode digital stations on the air for any purpose without causing massive interefence of every other ham-related activity on the air.

The thing is, you see, that the cynical members of this committee knew that they could ignore warnings about the chaos that multiple wide-mode digital signals would cause on our bands - because the comittee never intended for this system to use Ham Radio in the first place.

That's right; This is another one of those "Amateur Telephone" scams, where Internet junkies put Amateur Radio traffic on the Internet and call it "Ham Radio" because the data was taken from Hams. They lied about it because they knew that if they told the truth, thier non-ham ideas would be laughed right out of the hobby. Winlink2000 is another one of those "ham radio digital modes" that could not exist or operate without Internet linkages.

Yes, the ARRL actually decided that we as Hams should back up the Internet - by using the Internet. (Duh!)

In other words, these people have no clue whatsoever about emergency communications - but they are going to force their ingorant, anti-ham policies upon the Amateur Radio community anyway - with the help of the ARRL. - The result will be that all Hams will look like idiots, not just the members of this "committee".

What has this got to do with the ARRL's decision to "take over" ARES, it's logo and all of it's operational issues? - It is so they can cram this cynical non-radio solution down the throats of Amateur Radio operators who are really more interested in trying to use Ham Radio.

ARRL: The hobby is "Amateur Radio", not "Amateur Telephone"... Get it?

Take-overs like this are usually motivated by a desire to force something upon people against their will, and this shameful takeover attempt on ARES by the ARRL is no exception.

I call it an "attempt" because ARES members across the country are already up in arms over this ignorant, cynical and destructive crap.

If you know any of the great Hams; The real Hams who pass emergency traffic every day on HF, please send them a copy of this via E-mail. That way, when they have been pushed aside to make room for "Amateur Telephone" operators who do not even use radio, they'll know how it all happened, and why.

It's another attack on the hobby by cynical Internet junkies, aided and abetted by the ARRL, as they did with Packet Radio. We all know how Packet Radio ended up after this treatment... Now the same "wisdom" is being applied to ARES.

Isn't that "special"?

Hey, the ARRL is made up of humans, and is not by any means "all bad"... Why not give the president of the ARRL, Jim Haynie the benefit of the doubt and let the gentleman know how you feel about this matter? His E-mail address is: w5jbp@arrl.org

A 28.8 modem is 28,800bps. That kinda tells you how slow a 1200baud modem
is. Verry slow, but slow is good when signals are bad.

Hope I could help you.

Has anyone experimented with using the 9612 and Motorola Bravo Plus pagers?
Our local ARES group is interested in the idea of an "off the grid" paging system.

Any ideas?

Hi,

I'm about to buy an external 'computer controlled' receiver. There are two that I'm aware of. They are the Winradio 1500E and the ICOM PCR1000. I'm wondering which one is the better value, and hoping that someone has done the comparisons. Things like sensitivity, ease of use, and software availability are what I'm looking for. Also, I plan to use the receiver on the HF ham bands as well. Do they decode RTTY and CW?

Any information that anyone can provide about these receivers will be a great help. Please reply here. Thank You.

Newsgroups: rec.ham-radio,rec.ham-radio.packet,rec.ham-radio.swap,rec.radio.amateur.swap,rec.radio.amateur.packet,rec.radio.amateur.equipment,

1) Standard (brand) "Twin Bander" (Dual Band) 144 MHz/450 MHz FM Transceiver. Includes optional 100 channel memory upgrade. Can also be used for repeater or packet duties. All controls are on the microphone so you can mount the main unit anywhere in your car or truck. It includes the 2m extension cable between the microphone/controls and the main unit. It works perfectly and looks near new. It's never been abused. It has been modified so it can transmit/receive on Civil Air Patrol frequencies. It is made for mobile use so it needs 12 volts DC to operate on. It has around 50 watt output and can receive from 118 MHz to over 800 MHz in addition to the ham and CAP bands. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible.

2) ICOM IC-W2A Dual Band FM hand-held Transceiver. 5 Watts output. Also modified for use on the CAP bands that have no negative effect on normal operations. This also receives outside the hambands too and includes 118 to over 800 Mhz. It can receive on two different bands simultaneously, and can also be used as a cross-band repeater. Simultaneous receive and transmit is possible. This unit can also operate packet. 60 memory channels.

3) Cushcraft R-5 HF Vertical antenna. Perfect for the 10M band now coming back alive. This unit is near-new, since it was only installed a couple hours before a neighbor threatened to sue me over it (CC&Rs). Please, no comments on that LOL... I dealt with that some time back. I don't recall the specific bands this antenna works but 10/15/17/20 come to mind.

If you don't want to spend cash, I will negotiate for certain items I want you can buy off your credit card and ship to me in exchange.

Please, PLEASE... don't contact me UNLESS you are serious about buying one or more of the above units, I get too much email as it is. I'll accept best offers for them all. $350 minimum for the Standard, $300 for the ICOM, $150 for the Cushcraft. You pay shipping costs.

73,

Jerry Bransford

Hello,

I have a 27mc CB-transceiver with a 1200 BAUD packet modem.

Is it possible to make use of a standard modem(33k6) and connect this on my
27 Mhz CB-transceiver.

Greetings

Quasi !!!!!

We laid a foundation for major ham(amateur) networks in the Netherlands...
what if i where a HAM who uses the CB network on a daily basis? If any CB'r
who read this and has any questions about *anything* packet related, please
post it in this newsgroup. This is what's internetnewsgroups about.
Centralizing information. If you want to moderate by having a licence or not
you're a very sorry person IMHO.

I noticed this attitude in dutch hamgroups as well. I'm sorry but i found
the "go there" very offensive. I always thought we are to help one eachother
in this field. Don't stick your head in the sand.

This newsgroup is intended to serve the needs of Amateur Radio operators,
not CB'ers.

There are other newsgroups dedicated to CB radio, where you can get much
better information from your contemporaries... Go there.

I'm sure I'll be corrected if I'm off base here, I don't really mean to
flame anyone (really!) - just a couple questions:

Doesn't the term 'CB' mean different things in different countries?
Looks to me like this guy posted from the Netherlands. Even if he's not
a 'licensed' operator, couldn't it be possible that in other countries
the unlicensed CB type operators are allowed to use digital modes? Or
maybe the Dutch government does require licensing for CB and maybe even
has effective regulation?

Just an observation, but looks to me like (assuming he's following local
laws) this guy is: being creative, trying to expand his capabilities,
attempting to increase his knowledge, experimenting... Basically doing
what many consider to be (at least what used to be) the heart and soul
of "Amateur Radio"

'Scuse me - getting off my soap box now.

I'm in the market to purchase an HPC (Win CE 2.0+) in the near future. My purpose in doing this is to have something for work AND have something mobile for packet radio in the car.

I'll be using a KPC3 and IC-2100H.

MISSING LINK...HPC!

Help me prevent making a mistake. I need a good HPC that will do the job!

Your modem expects to train on the line conditions first -- so you can't
use it for packet in the traditional sense (where lots of stations share
a frequency). If you could have a frequency each direction (it would
need to be full duplex) and can get a quiet enough channel, maybe it would
work. It would have to be pretty quiet though, because 33k6 needs
quite good line conditions.

Not only that, but some of us have ISPs that remove this crap from the
newsgroups, but not when a replier reposts the whole thing. So we get
to see what we missed, courtesy of a well-meaning friend. ;-)

My new Kenwood HT-D7A handheld has a built in TNC and APRS. I'm new to this and have been experimenting with it.

I'm able to enter my lat/long, icon, call sign, messages and receive messages from others in my area however I can't seem to send any. They transmit, but aren't received, at least I'm not getting a response and my ID doesn't show up on the map.

I'm using the 144.390 freq and I believe my problem is in the packet path setup. From what I can gather from a few webpages, I need to specify the path and currently I have it set to the call sign of a very close digipeter which happens to be wb6tms-5, relay, wide.

Is the format of the path correct? Is there a standard way to do this? Anyone else doing this on the Kenwood.

Please post to the group, thanks in advance

Good luck on finding a good "clerk". I used to work at Rat Shack. If you
still have any problems. let me know via email and I'll send one to you by
U.S. Priority Mail for $10 buck. I know It's a little high, but I have to
drive down to the P.O...

Best;
Dave

P.S. picked up a ICOM 720a, would like to get a price to replace with like
radio for Insurance..

That's hard. You could finda someone or a dealer that would accept payment
via a credit card. My site Is setup for that, If any dealers need to know
how. Let me know via email.. But get everything In writing first before
doing any "deal".

Thanks;
Dave

You could try RELAY,WIDEx-x. Substitute the number of digis you want to
go through for the x-x. eg. 3-3 will digi through the next 3 digis after
a relay digipeats it. If you can hit the 1st digi without any problems,
then just use WIDEx-x. RELAY is just used because all home stations
should have an alias of RELAY and will digipeat to the WIDE digi if
mobiles or hh rigs can't hit it.

hello.
i'm fairly new to ham radio, and am interested in getting into packet.
could someone suggest a good tnc? (i'm probably going to eventualy want to
run tcp/ip over it).

thanks.

Hello Nall

The best TNC that I have found would be the Kantronics Products. If you are looking at running both HF and VHF then I would look at the KAM Plus. If you are looking at only VHF then I would look at the KPC-3 Plus. The KAM Plus is a multi mode TNC and it works very well. I would stay away from the MFJ products.

And I use all MFJ TNC's for HF, VHF and UHF and never had any
trouble with them.

Walt.

Someone recently referred my to the PEST website for information concerning the conversion of a Sound Blaster sound card for Packet use. The website really doesn't describe the step by step process for this conversion. Can anyone refer me to a good book or a website that explains the process in simple terms because my education exceeds my intelligence???

PLEASE RESPOND VIA E-MAIL. I APPRECIATE YOUR HELP.

I am interrested in corresponding with any hams currently using TheNet firmware in an MFJ-1270.

Our club has one with the standard firmware that we are using as a digipeater. I would be interrested in anyone who has had experience with this TNC and TheNet X1J4 firmware. I would like to make the digi a node as well, but don't know anyone personally in the Cleveland, Ohio area that is involved in this activity. I am mostly interrested in finding help in setting the parameters in the firmware properly.

I'm currently using X-1J in the Victoria Texas area,
and have been for the last 5 year or so. It has been
very stable with the exception of two periods when it
would mysteriously start losing buffers. This seemed to
occur when there was an abnormally high level of
activity on the channel (even though the activity was
NOT going through my node). The parameters MUST be
coordinated with other nearby nodes on the same
frequency. Do NOT use the default parameters unless you
are the ONLY node on frequency or you WILL screw up the
system. The local "standard" here uses locked-in
"quality" values for "neighbor" nodes, and a default
"quality" to prevent other than neighbors from being
passed on to other nodes. (If you don't understand
this, email me directly and I'll try and explain
better). Of all TNC's I've used, the "late model"
MFJ-1270 and MFJ-1270B are the easiest to set up. Older
model 1270's must have the processor and memory
upgraded before use. If it's one of the OLD-OLD 1270's
with the MF-10 filter chip, the mod to remove the
filter should be performed as well.

Best luck!

Harvey, WB5MCT

I am researching wireless IP internet connectivity options for clients in remote areas. (generally located in the Americas, North, Central and South America)

I am hoping that someone can give me a feasibility of using this for connectivity in these areas and describe what is involved. If someone could specifically describe how IP Addressing is administrated and how traffic is gatewayed to the Internet I'd appreciate it.

I would also appreciate a discussion of the costs involved and how many trunked units might generally be required for equivalent dialup modem bandwidth.

Thanks very much for your email reply

Anybody want one of these for packet? CRT is decent.
Free to good home. Does current loop and RS-232, with everything you need
to know screened on the back above the DIP switches.

Boatanchor waiver application. It weighs as much as a BC-348, and I need
the space for Real gear.

Pickup only (I ain't crating this beast!), Albany, NY area.

Hi there,

I have an older MFJ 1270B TNC with a bit of a problem. I usually leave the
thing on all the time (what's the use of a mbx if it's not on? hihi) and
usually in monitor mode. It works just fine for several hours, then it
starts displaying just random characters as it receives. If I turn it off
and back on just a second later, everything's back to working fine.

Does anyone know if that model has a common problem? And more to the point,
how to fix it?

If you need any more info about the problem or have some ideas for

solutions, please e-mail

 rj-at.dev.null@tcoe.trinity.k12.ca.us (remove all between "j" and "@")

Yes in principle it is quite possible to send and receive email over HF or VHF radio, the problem is the available data rates.

Imagine connecting to your ISP at only 300 bits/S! But it is worse than that, consider that you and 10 other people are trying to share the same noisy, 300 bps link. That is TCP/IP over HF radio.

If you can get more bandwidth on the radio signal then in principle you can send faster. On VHF things are a little different in that wider bandwidths are more readily available but performance is typically limited to 9.6 Kb/S, still not brilliant but almost workable for short text messages.

If you are prepared to move up to UHF or better still Microwaves then you can begin to approach realistic data rates but then the range is very limited perhaps only a few 10s of miles point to point.

BTW if you want to do this then you will require a transmitter licence.

I suggest that you take look at the ARRL or RSGB pages for general
information on Amateur radio and possibly the TAPR pages for more
information on packet radio systems.

www.arrl.org
www.rsgb.org
www.tapr.org

There is a book by Ian Wade 'NOSintro' ISBN 1-897649-00-2 that explains
some of the principles, what you need and how to configure KA9Q's TCP/IP
package for use over radio links.

Of course if you want to do it on a commercial basis then that is an
entirely different story.

Hope this helps

Depending on where you are, there are qutie a few BBS systems on 2m that have internet links to them at some point. If you use a TNC using AX.25, the BBS will provide the link to the TCP/IP network.

Check with your local sysops.

Here is a website devoted to internet connectivity via
HF radio. We are really talking here about COMMERCIAL services
and not just amateur radio.

<http://www.nsrc.org/wireless/HF-radio.html>

8-ary modems of the type used for automatic link establishment
(ALE) also improves HF-internet performance.

You might want to check the memory backup battery. Usually a button
cell in a holder about the size of a quarter or so.

Bad battery made my old multimode do those crazy things a while back.

Using APRS software it is possible to send (I haven't received yet but also possible) email. I do this with a handheld radio that communicates with another radio connected to a computer that is connected to the internet. I was amazed that it worked.

Does anyone know how to get the HP Jornada 820 to interface successfully
with the Kantronics KPC-3. I just can't seem to get the job done. I think
the problem is on the Jornada side, but not quite certain.

ANY advice would be really nice!

All it should take is a cable that would allow you to hook up the Jornada
to a modem. Then use whatever the Jornada uses as an equivalent to
HyperTerminal (the Jornada is a CE-machine, right?) to talk directly to the
modem, i.e., a "direct connection via COMx" rather than to try to "dial"
the "modem."

Hi! How are you doing? I'm going to get a new HT either Yaesu VX-5R or
Kenwood TH-D7A(since I may try to operate packet radio). Any suggestion?
Thanks!!

73,
Vic

Hi,

I would go with the Kenwood radio. The TH-D7A is wonderful for APRS.
The TH-G71A is a great HT also. I own both. If I was not doing APRS I
would use the TH-G71A with an external TNC.

Tried that. The Jornada (A CE device) won't let direct access to the COM prot for some reason. It's just not cooperating.

I am trying to use the AGW software to make contacts through MIR... here is
the problem I'm having...

Every article I am reading says to do an unproto CQ (or grid square) via R0MIR... Now I found the spot to setup the unproto call and can make AGW transmit... but for some reason it doesn't seem to be working... I know I can get in because I can drop to terminal in win95 and do it by hand that way... but needless to say I'd much rather have a windows based program...

Any suggestions welcome.

Need to use a Null modem cable for the serial communications. Just use the same serial cable that you use to sync it with your PC. That's the only thing I was missing trying to get my 620LX to talk to my KPC3.

Here's the odd trick with the hyperterminal settings.

Going off of the info for CE2.0 on my 620LX, I don't know what changes have been made to CE3.0 as far as the hyperterminal updates, etc. I have mine setup to use just the regular Terminal program.

You need to place a checkmark in the box to open a terminal window before dialing. This then allows you to "talk" to the TNC. The other odd trick is in order to set this up on 2.0 (again...I don't know the differences between

2.0 and 3.0) is that you have to populate the telephone number field with anything. Doesn't matter...so long as when you connect it can go out and "look" for the serial data coming from the KPC3.

Lemme know if the null modem box doesn't work. I have people that I work with at HP that are hams and are doing these things all the time for mobile packet and APRS trackers.

I'd like to hear from anyone who has written digital signal decoding software using sound cards.

I'm currently searching for information relating to decoding digital signals (CW, RTTY, AMTOR, CLOVER, PSK31, etc) using a sound card. I've used several of such software packages currently available for download and I like to try my hand a writing something similar. I have many years experience professionally programming both DOS and Windows applications using C/C++/MFC, but have never had need to interface to a sound card until now. I'd like this application to be Windows 95/98 based but I've heard rumors that directly accessing the sound card interface is difficult, if not impossible, under that OS.

Any tips you can pass along that can get me started will be greatly appreciated; also any info on books/articles/websites/source code/libs you've found helpful.

Peter, of PSK31 fame, told me that the Microsoft mmsystem.dll
handles interfacing to the sound card. I haven't looked for
info on that DLL but I assume it is available from Microsoft.
I'm also interested so please post whatever sound card interfacing
info you gather.

One way around the problem is to wrap the speed-critical stuff in
a DLL, but use VB for the user interface.

Actually getting samples from the sound card isn't all that hard.
For initial development you may even want to avoid the soundcard
stuff entirely, use whatever program is available to you to
record samples to a file, and then process them offline. Either
use the Windows API functions, or just use fopen() and grab the
bytes yourself.

What to do with the samples once you have them is the hard part.
My usual suggestion for a first book on DSP is Ifeachor and
Jervis, _Digital Signal Processing: a practical approach_.

For comms stuff (which you will probably also need), try a
text like _Communication Systems_ by Haykin.

:The problem with programs that use soundcards that decode radio info can't
be built around visual basic
:as VB is so damned slow.

Actually VB 6 is not that slow. Problem is in lack of support for
Multi-threading and callbacks that are required to fully exploit the
potential of mmsystem.dll API.

:Thus, soundcard decoder programs require the knowledge of real programmers (C++) which explains why they are so
:damned buggy, due to Windows needing thousands of lines of C++ code just to initialise a stupid program (being
:sarcastic but you C++ Windows programmers know exactly what I mean).

Well, It's not that bad. But there is function of complexity of implementation vs. size of the project. For VB it grows steeper but VB starts at 0 value. C++ starts at some positive number (since you will need bunch of to put "Hello World" on the screen") but grows slower with size of the project. To make story short: smaller projects are easier to do at VB while large ones on C++.

George

I hope you find what your looking for. I would make a sujestion to you.
I would sujest that you try to do this under Linux (i.e. Unix) first. I
think that you would have alot better response with the linux OS versus
Windows. Good luck let me know what you find out.
               Thanks Oris

Michael,
you can find at least one very usefull source code example
demonstrating sound card programming under MS Windows on creative labs
(soundblaster) ftp server:

    ftp://ftp.creaf.com/pub/creative/devinfo
The file I used is
    fullduplex.exe
I used this example as a starting point for my DSP programming under
Windows NT using Visual C++ 5.0.

Good luck!

Gerd Niephaus

George hit the nail on the proverbial head. The problem with signal processing in real time is that you need a real-time processor. Unless your eating all of the processing time this can't be done reliably in Win9x.

The second problem is that Win9x does not let you talk to the card at the hardware level, as well as to the DMA. You would need to do that to effectively perform near real-time capture and hold processes of any sound frames you're trying to deal with. Best bet there is to write a 16-bit dll, which will allow you to do these things.

Dear Mike,

The most comprehensive source that I have found (excepting purchase of an SDK from Microsoft) is "Windows 95 Multimedia & ODBC API Bible" by

The Waite Group Press - Richard J. Simon, Tony Davis, John Eaton, and
R. Murray Goertz.
It has chapters on Waveform and Auxiliary Audio and on Multimedia File
I/O. Those two chapters are really all you need to do everything that
needs to be done for a mode like PSK31.

If you can locate a "Books-a-Million" store, they may be able to help
you - I got my copy at 50% discount - normally $54.99. CD-ROM is
included.

Yes, but where did you go from there? Getting the samples is the easy

part. ;-)

And even then, "real time" is a bit of a joke. For example, the best resolution and lowest timer interval you can get out of the high resolution timer is 1ms.

With PerformanceCounter API and high priority levels you can get better
resolution and response. Win NT will be much better choice for
time-critical applications. The reason for that is Win95 memory management
is designed to better utilize physical memory at the expense of response

time. For sound processing NT offers more then plenty real-timeness unless you want 44Khz resolution stereo (don't need that for SWLing).

Don't know much about Linux but am very curious about it.

One of the nice things about Win95/NT/OS/2/Linux is that you don't have to write low level code to access the sound card. The drivers take care of it, and it should would on all types of sound cards. One of my biggest peeves is that most of the sound card software requires a SB16 or 64AWE sound card and doesn't support anything else since they use direct hardware calls.

Decoding RTTY doesn't need real-time processing. Sure, VB isn't quite up to snuff for it, but it does make a nice front end so you don't have to spend a lot of time writing C++ code. Use a DLL for all the signal processing. Buffers can take care of any processing lag, although decoding RTTY isn't

exactly "intensive".

The problem with what you're saying is that the drivers are only meant for playback and recording in a certain format - NOT the kind of FFT processing that's required. This processing is also not available in the standard sound dll.

> Decoding RTTY doesn't need real-time processing. Sure, VB isn't quite up to
> snuff for it, but it does make a nice front end so you don't have to spend a

> Buffers can take care of any processing lag, although decoding RTTY isn't
> exactly "intensive".

Disagree. It's a lot more complicated than you think. There's not just the decoding part that needs to be done here. There's also the issue of discriminating the desired tones from the rest of the clutter and noise that you're passing through there. You need FFTs to do this since zero-crossing techniques just don't cut it in a real signal environment.

Once that filtering is done, only then can you start decoding the signal. I agree that some buffering is required, but you only have so much buffer space for windowing an accurate capture and hold function. Sooner or later if the processing isn't fast enough, you will have a buffer overflow and will lose synchronization. I've done this with single-processor 486s, Pentiums and Pentium II machines. They all overflow at some point when trying to do this with the standard interfaces to a sound card.

Since we're not talking about true multi-processing operating systems/environments, the signal processing is too intense for the results to be refreshed to any Windows user interface (especially with VB). This may be a bad analogy, but the result is similar to getting dropouts on RealAudio. If you're dropping large chunks of data during the buffering process, what's the point.

The bottom line here is that sound cards were never designed to be true signal processing chips like the TMS series. If people want a real decoder in their machines, they need a different card that's going to do the extra processing for them rather than rely on their main processor to do it for them.

73,

DOS is conspicuous by its absence. Aren't there DOS drivers available
for soundcards? Are there standard DOS calls available for soundcards?
If not, could we come up with some? How is/was soundcard interfacing
handled under DOS?

I'm really surprised it's such a chore to implement this stuff under Windows. Not to turn this into an OS war, but reading sampled sound (and playing sound for transmit mode) hasn't been a major problem on the Mac (for my MultiMode). Perhaps it has to do with Microsoft's implementation. I haven't done any serious Windows programming (I sometimes consider porting MultiMode over to Windows, although this discussion seems to imply that the sound I/O isn't trivial), but it's quite simple on the Mac. You decide which sound input device to use, set the sample rate, sample size, etc, and that's it. Specify how many samples you want, and your callback procedure gets called (at interrupt time) when they're ready. The sound input is buffered, so nothing gets lost if it takes a few extra milliseconds (or even seconds) before your procedure gets called again. (Perhaps because you're doing some special processing and disabled interrupts, or aren't ready, for whatever reason)

After first writing my low-level sound input routines, I haven't touched
them in a year of adding new modes to MultiMode, except one time, to handle
the newer G3 Macs that can only sample at 44 kHz.

Packet will more slightly more of a challenge, due to the quick turn-around
times required, but it still looks quite easy.

Hi Chris,

Long time - no type...

You're right, this could very easily turn into an OS war. Believe it or not, the Mac's (actually Motorola's) interrupt structure is a lot more efficient for these kinds of things. What you say is essentially how you would program a sound card if you were to use Window's built-in sound interface. However, Window's sound drivers are still tied back to the clunky IRQ scheme still underlying in DOS. This is part of the speed issue.

73,

Interaction in DOS is/was at a hardware and firmware level. Thus, SB compatibility was a significant issue in the bad-old-days. During software installation, the setup program looks for the SB environment strings, or queries you for the IRQ, and I/O and DMA ports. Some "game engines" supply sound libraries, almost always supporting SB. Quality varies. The most stable of these is Win9x. :)

Michael.

This approach is not cheap, but very interesting.

Buy a TI 'c6x01 eval kit ($999 or 1450, dependeing upon whether
you buy the fixed point or floating point unit). The DSP eval card
plugs into the PCI bus and is downloaded via the PCI bus in WinNT
(I'm not sure whether it works with Win95/98 or not). Included is
a C compiler, IDE, emulator and download software. The DSP card
has line in, line out and mike in audio ports.

See TI and DNA Enterprises for details.

It's not. You just open the device, and pass buffers in and out. The multimedia library takes care of the rest.

Michael.

I take it this will be 1200 baud packet.

Also please Please PLEASE port your brilliant software to the PC - not necesarily Windows

I hope you mean for Chris to port Multimode to Linux and not DOS instead of Windows. Even if I may argue that he may do better porting it to Windows (if that is indeed practical), Linux is at least a current, viable, and very powerful operating system for the PC. DOS hasn't been a current O/S for 4 years now. Why do hams continue to write for it? Then again, there are some still writing programs for the Commodore 64, so I shouldn't be surprised.

Can you be more specific about the "speed issue?" Are you talking
about *latency* (i.e. the amount of time required for a given sample
to wend its way through the various layers of the OS to reach the
user's application)? Or are you talking about the ability of the
multimedia APIs to deliver sampled data to the application at the same
rate as they are being sampled (e.g. the sound card is set to sample
at 44kHz, but samples only arrive at the application code at a lower
rate, like 38kHz)? If neither of these is the case, then how can you
claim that the API is the problem?

I submit that the true bottleneck is not the Windows APIs at all, but rather the algorithm, the implementation of that algorithm, the processing speed of the CPU, or some combination of these. As noted in an earlier post, if the processing demands are too heavy for the main CPU to handle in real time, then some kind of coprocessor, whether in the form of a dedicated DSP chip or an SMP architecture with multiple CPUs, is pretty much a necessity for real time processing of the sampled data.

> Can you be more specific about the "speed issue?" Are you talking

Look, you can set the card to "record" and fill a buffer via the APIs. The way the APIs work, an asynchronous callback *message* (essentially and event message) is sent when the buffer is filled. Keep in mind that the MMSystem and MCI APIs were not designed for anything past the transfer of this data either to or from a file system. Also, depending upon what the computer is doing at the time (maybe you're also downloading a large file off the Internet, trying to access a newsgroup using OE5 <G>, or even processing the data, whatever) that message is not enough to ensure consistent processing of buffer chunks. If the processor is busy, more than one message can go unresponded, and you lose data. Different latency than you asked about, but nonetheless that's the way the API works. If the API were such that a specific routine were run synchronously after each buffer fill, that would be a different story.

> rather the algorithm, the implementation of that algorithm, the
> processing speed of the CPU, or some combination of these. As noted in

This is the other part of the problem, since they go hand in hand. Assume at this point that the buffer is essentially filled with signal levels in the time domain, ready to be used. You still have to convert that data to the frequency domain (FFT), optionally filter it, determine the levels about the region of the mark/space frequencies, and buffer that. Another process has to then synchronize and interpret the resulting mark/space stream. On top of that, all of this processing has to compete with other processes that the computer is doing (see above). On 486s, you barely have enough overhead just to perform and display a 4096-point FFT at an acceptable refresh rate. Even then, if you drop a chunk of data it doesn't matter since your eyes will filter that out.

> sampled data.

Agreed. That was my earlier argument when I mentioned that a true DSP card should be used. A sound card is *not* a true DSP, just a simple time-domain analog/digital converter. Perhaps the scheme of doing everything in software will work on a 500MHz Pentium III, but how many SWLs have one of those. Just not practical.

Hash: SHA1

There was a program called MDT that decoded Police Packet at 4800 baud at 850 - 860 MHz or so, and did it with the Multi-Media API for the
sound card.

Basically he used a C module to get the speed he needed, and then programmed everything else in Visual Basic.

Alas, there was a big late-night attack by police in several cities to confiscate the software. I haven't heard if the process is on-going,
but until new laws are written, police will confiscate contraband first
and only say oops if you got enough money to make a Supreme Court case. That along with Cell-Phone receivers, and CW radar receivers.

I did a search on MDT and most of the sites it was at are now gone.

The only remaining link I found was at Qualcomm and the San Diego Police are scared to go in there:

http://people.qualcomm.com/ppomes/Crypto/MDT.html

But this is the original MDT message, and not useful for the Sound Card software you need.

The U.S. is quickly becoming a clone of Communist China. It may be that we stole the nuclear secrets from China, rather than the other way
around! We're too stupid to let mere engineers design government bombs :-)

No doubt it's because of all the guns Paul has. ;-) ;-)

BTW, there is additional decoding software (including MDT) available
at http://www.eavsdropper.dabsol.co.uk/software.htm

HY,

no philisophic point of view but have a look at the frequency analyzer at
http://www.relisoft.com/#freebie
They take a sound from mic, perform FFT and display the spectrum on screen
in real time.
Works well on win95/98, source in c++ is available and program (exe) size is
70 K yes 70K !!

If anyone write a soundblaster prg wich can decode navtex
please send it to me.
Thank's
All the best
Stephan

If you want sonething that really screams, try using FPGA. Xilinx
has an app note using a 4000 series part to implement a 16 tap FIR
that runs at 81 megasamples/second. That's equivalent to 1875 MIPS.
Woo boy! Analog Devices and Burr Brown have new A/D chips which
can handle those rates (12 bit resolution). There's an article in the
current issue of Circuit Cellar using AD and Xilinx parts to implement
a fully digital receiver for HF.

Cecil,

DOS isn't really an "operating system" ... it's more like
a non-reentrant interrrupt handling virus :-)

(Of course Win 9x isn't *much* better)

Of course not - Win 9x is just a pretty wrapper around DOS. ;-)

With one VERY SIGNIFICANT improvement - it's 32 bit. And that can make a difference - especially when the application itself is written for 32 bit environment.

I have an old 8ch Midland 70-336A VHF radio. I was wondering if there was
anyway to program the EPROM with a regular EPROM burner??? Can anyone tell
me a way to get this radio programmed. I bought it from a guy not in my
area so the repeaters in my area are not programmed into the radio. Any
help would be appreciated. Thanks. 73's

Hello,
I have for trade a MFJ 1278 Multi-mode TNC with multi gray level modem.
Includes all the cables Manuals and software. The software is Multicom
MFJ1289 modes are :
pactor
HF packet
VHF Packet
RTTY
ASCII
FAX/Color Fax
CW
Amtor
Navtex and color slow scan
This is a great TNC for these modes also has mail box cw mem keyer and more!
I would like to trade this for some Kenwood ts-520s assecories Iam

looking for a Kenwood DG-5 Digital display. Or send me a email with what you have to offer to kb9hgi@qsl.net Thanks!!!

Hello All,
I have for trade a MFJ 1278 Multimode TNC Has 10 modes and dual ports. Includes all the cables, software and manuals. Has some scratches on top of case but works well.

I would like to trade this for some sort of 10m fm radio, 2meter radio or a kenwood DG-5 Digital display for my kenwood ts-520s. You may send email

me other offers you have for trade. Lets make a swap! E-mail me today!

Hello , I have a VX-5 forsales. NEW CONDITION It's about 3 months old
a 9Dxxxxxx series ,and I have never had a problem with it.
It didn't do any hardware mods, I just use the Sofeware EVE to mods it. I'm
not use 6 meters at all since there has no 6M repeater.
and the main reason I selling it is I need the money for my school . It's
comes with radio,antenna, box ,manual , case(CSC-73), Rapid desk
charger(CD-15), Mic adapter(CT-44)and
the RS clip on belt clip. I don't want to give it up but
I need to pay by school for next year. I'm asking $349 + shipping.Thanks
you!! Victor iden1000@hotmail.com

I am in need of help getting my KPC-3+, My Garmin GPS-II+, and my Mac
laptop to work together.

I am using the KPC-3+'s second serial port for the GPS unit.

I can get APRS packets from other stations, but I cannot seem to read the
GPS data. The information on how to do this lists some options for the
Windows only version of APRS. I followed every other instruction to a T,
but still can't seem to get it to work.

Has anyone done this successfully yet that might be able to help? I have a
public service event coming up on 8-21 and 8-22 in which this will be
needed.

Greg

What's this about a second serial port in the 3+? I can't find any
reference to it in the spec sheet on Kantronics's web site. Is it
available externally?
I have a 3 (non + version) and am thinking of trading up.
Thanks 73 -Rob- (VE7EJE)

I'm just about to try a Tigertronics BP-1 and I see that connection to
the radio calls for a wire (black) to be connected to GND on the mic
plug.

The description I have isn't too clear. Do they mean the mic ground or
the chassis ground pin? Or doesn't it make any difference?

TIA and 73,

Marty K1FHR

     You sure that is the Mike jack. I have BP-2m and the
conections were (for rigs other than Kenwood and Yeaszu) only one wire
got grounded that was a wire (don't rememebr the colorss) to mike
center one to speaker center and and to the speaker grond which
conects to chassis ground

For sale, HA-201 2M amplifier. Great for getting that HT signal out.

Output 8 watts with 1 watt in; 1.5 in, 10 out. Appearance is very good.

It has been modified by substituting a carrier operated relay(COR) for
the original diode switching TR circuit which noticeably attenuated the
received signal. Also, SO-239's have been paralleled with the original
RCA jacks for both input and output. Dimensions: 5.5"x3.5"x3.0".

With original manual. $35 plus shipping from CT.

Does anyone have BP-1 connected to a Kenwood TM-241a or to a rig with a similarly wired 8-pin mic plug?

If you have a working hookup, I'd appreciate information about the pinout. I can't seem to get mine to work, and I think I've got the COM port problem solved.

The skytel skywriter 2000 pager is a nice little unit which runs it's

own OS and allows developers
to create apps to run on it. It includes a small multi-line display and
fairly usable small keyboard all
in a compact unit. While attending an IETF conference recently Motorola
loaned attendees these
units for the week and I had a chance to try one.

I was wondering if anyone else had thought about or looked into
modifying these units to work with
packet? Seems llike the perfect little unit! The units can be purchased
for around $300 and if they could
be modified to operate on Ham frequencies surely software could be
written to handle packet.. From there
I can think of all sorts of interesting apps such as display of simple
APRS maps, DX cluster alerts with
greater urgency if the region of the world you were interested in
started showing up a lot, perhaps even contest logging. How about
sending quick notes directly between two units while at a Ham Fest.

I was curious about this pager generally so I have sent for a free
developers kit (also part of the conference promotion) This will give me
software answers. Anyone willing to try to open one up to see about the
frequency issues?

You will have to do a whole bunch of work. The Pagewriter 2000 is hardcoded to work with a ReFLEX50 or ReFLEX25 network. The Protocol stack is hardcoded in masked microcontrollers. The RF transceiver operates at 900 MHz, and will not translate down to 144 or 440 MHz withoug extensive redesign. Have fun with the software developers kit, there is a bunch of neat software that you can do on this.

I want to buy a high power 2-meter amplifier such as a Henry 2002 or Commander.
I am willing to pay a premium price for a premium amplifier.
I am also looking for a six-meter Commander with [TWO] -3-CX-800-A7's.
If you have any of the above please e-mail <mailto:kf4lap@planttel.net>.

If God can prevent evil, but doesn't, then He isn't all-loving.
If God intends to prevent evil, but cannot, then He isn't omnipotent.
If God both intends to prevent evil and is capable of doing so, then
how can evil exist?

You cannot believe in God and also believe that he is not responsible
for all the churches he destroys with tornados, hurricanes, etc.

Heck, in the Wholly Babble, god(tm) admits that he(tm) CREATES evil!
Somewhere in Isaiah (45:7, if memory serves).

Hey, thanks for the tidbit, I'm arguing with a fundy who claimed God
cannot coexist with evil, but thanks to your reference I can now tell
him that, according to the "Wholly Babble," God created it!!! Of
course, some simple logic would tell you that if God is the creator of
all things then he must've created evil, but fundies cannot avoid it
when the Bible tells 'em so.

Oh yeah, in my copy of the "Wholly Babble," the fundies have an
annotation which supposedly resolves the contradiction. It is as
follows: Heb. 'ra,' meaning "sorrow," "wretchedness," "adversity,"
"afflictions," "calamities," but never translated sin. God created

evil only in the sense that He made sorrow, wretchedness, etc., to be
the sure fruits of sin.

The fundy will then argue that man brought sin into the world with
'the fall,' which leads us all back to the problem of evil. God
could've just as easily created a world in which man freely chose to
do good as one in which man freely chose evil, so God is ultimately
accountable for everything.

The fundy will then crawl behind faith, and die. Good riddance... .

Darwin

Hi Kent,

I had a lot of fun reading your first post.
I was about to write the same thing.

God has a sense of humour. I hope Hantson will get God's help
for his state of mind, which is in a worse state than the transmitter
itself :-)

You needed someone to tell you this? God created Satan (in christian mythology) right? And he could destroy him as well right? But he chooses not to, right? Therefore, God is EVIL.

Hi there,
              If you would like to build your own TNC complete with
32k Mailbox we have a complete kit of parts or just the PCB it is a
plated thru hole board and has a solder mask and resist and will run
any of the 32K Eproms currently available for full details visit our
Website

Interested in putting up a node in the Southwest Wisconsin area. Looking to
buy a TNC that allows to work as a node. I heard that an MFJ model does
this. Need advise.

VERY NEW to the idea of putting up a node. Haven't determined if I want
to set up a PacketCluster or not.   Regardless, I need to think about
purchasing a good TNC that does the job without mortgaging the house.

Advise is good. :-P

Hi Tod
             If you fancy building your own TNC we do a complete kit
or just the PCB and it will run any Node software and we will even
program the eproms for you which is a free service. just visit our Web
page for details or email me

I need some assistance please..

Just upgraded to version 8.2 for my KPC-3..

Am VERY interested in APRS - what are the mandatory settings for the kpc-3 to be able to receive and transmit APRS? Any help would be greatly appreciated!

reply via email

73 Daniel kc4oxp@flash.net

p.s. I am in Georgia - also would like information on EMWIN - is there anyway that I could receive the signal here in Georgia on VHF?

Daniel, check out the Atlanta area APRS web site at: www.BSRG.org/
They have some links to click on their APRS page and other APRS sites,
plus there should be a name or two in there that you could send mail to
for contact in the Atlanta area. I didn't see any listings for TNC
settings, but when you run one of the APRS programs, whether it be for
DOS or Windows, the program will send parameters to the TNC to have it
accept/recognize data coming in.

Good luck, I think you'll enjoy messing around with APRS.

Bob, KB7ADO

Right now, I'm battling a situation involving a Sharp Zaurus ZR-5000. I'm
desperately wanting to use the terminal feature for packet. I have a PK-3
as a TNC, but for some reason they're not communicating.

Do you have any information that would be useful for me to successfully link
the two? If so, GREAT! If not, do you know where I can turn? Any help
would be most appreciated!

I'm wanting to create a mobile computer for work with packet in severe
weather for storm spotting and emergency situations. Thus, the need for me
to find a solution is important.

Hi Tod,
You don't say if the Node is to be stand alone ie. at a high/remote point, so hardware is probable approach or, say, at your house to put a path in a system in your area. In this latter case one might utilise more of a software approach and do more things with it. In either case a TAPR TNC-2 (usually clone of same) is probably the best bet, in simple terms. These include MFJ-1270b or c, PACComm Tiny/Micro 2 (Micro no longer made), and others. In the stand alone configuration you may remove the EPROM that holds the TNC's "Firmware" which tells it what it is(a TNC) and now gives it the new 'brain'/identity of being a Node. These Nodes of 'NETROM'/TheNet (plus) variants provide for a flexible network where nodes broadcast info to other nodes. While the Kantronics TNCs or MMI(multi mode interfaces) [I own a KAM/En] have the KA-Node(Kantronics node) feature and it will work as a node which is better than a digipeater, it will not appear as a node in the aforementioned network.

You have to identify your desires/'needs' for an 'optimal' acquistion. If you want to experiment, learn and build on that then you only have to get close. Of course after a while you may have 3 or 4 TNC/MMIs like myself<g>.

Simply, if you want to have it around, take it out portable, use it for a mail drop, fill in a propogation gap, in other words do as much as you can with one box, on V/UHF you'd probably do well with a beast such as the Kantronics KPC-3 or the 9612(which is 9600 and 1200 baud).

If it's to be part of network, 'remote', single purpose...stick with the Tiny 2 or MFJ-1270b or c. Oh, yeah, I guess the AEA PK80 would work.

Their both affordable, available, often used. Some of these kits may be a good buy if you are at a stage where you can complete it and set it up. If you have the social/technical support in the area it might be an idea.

If you have this available, you might check out what exists for nodes/networks/switches/bbs etc. It may seem like fun to put a node on a frequency by itself and in some instances it can fufill a specific 'need', certainly experimentation, however it can end up being just that. A node on a frequency by itself.

Good luck, read(lots of good back articles, newletters, books), listen, ask around for info. Then start off somewhere, ask carefully considered questions(it is a learning experience) and have fun.
If you need more out of area help feel free to e-mail.

73, John

Have you put a null modem in your cable from the Zaurus to the TNC?
I've got a Z5800 running packet with a KPC-3.

Is there a problem running BayPac's BP-2M under Win95? Tigertronics FAQ says that "BayCom and almost all of the multimode software will not function properly from within Windows" but goes on to say that "there is now a "true" Windows program that works quite well. It's called WINTNC..." Anybody using a BP-2M with Win95? How abt WinCE? I'd like to set-up a packet portable station with an HT, a BP-2M and a WinCE handtop (e.g, an HP320LX, which sells for less than a 200LX and has Office compatible applications).

I'm using the BP2M and Wintnc under win95. It works better on my system than Baycom 1.6. I registerd the program for $20.00 American and worth much more! Wintnc needs true/Standard comport properties. Not some wierd irq and io ranges. Runs great...if you need some help just drop me an email....73

Have you put a null modem in your cable from the Zaurus to the TNC?
I've got a Z5800 running packet with a KPC-3.

I am looking for any info, including websites, that have to do with
satellite communications using UHF/VHF. What is needed???   Do I need two
or more transmitters or can I use recievers for the downlink freq???
Any help will be greatly appreciated.

YOu only need transmitters for the band or bands you want to transmitt on and recievers for the bands you want to receive. You don't need seperate complete units.
You will need ssb or cw to work most of the birds. For the low ones which at this time is all but Oscar 10 , most can be worked with 100 watts or less into crossed dipoles.
It never hurts to have a small beam that can track them and less power.
You usually transmitt up on lsb and listen on usb.
There will be about 10 KHz of shift as the signal starts out high, then is on, then is lower in frequency as the bird passes over. You do not need a seperat unit, but it is helpful to have a seperate receiver from the transmitter so that you can hear yourself comming back so you will know where to listen for your replies. Also quiet often , you normally adjust your transmitter on the 2 meter uplink birds so you do not move the receiver. Hard to do with just a transceiver. YOu can use a receiver converter going into a lowband rig if you want to.

Dear Allen, and all the other readers of this news group
I am not a regular subscriber to this news group. Rather I am a researcher who searches for obscure information from sources that are not official in order to find out what the reality of a situation is. Many times what is offered as information from sources that have a stake in what is being expostulated is heavily slanted pro for their side con for the opposition. It is my function to discern what it real.
Just on the chance that you might know (and what leads me to believe that this might work is the fact that Sean mentioned an AR 3000a and you responded as if you knew what that was), what is a

Model GMRS-210+3
UHF Model Two-Way Radio?

I know this is meagre, but it's all I have except on the same page (that came on my FAX) that has the above model number are the following model numbers:

Model GMRS-10
UHF Two-Way Radio

Model GMRS21-A
UHF Two-Way Radio

There is also hand written line on the page that says Comtell Electronics.

What I am trying to find out is: Who makes these radios? Is it Comtell Electronics? What are a radios like this worth? Are they state of the art?

Any information would be appreciated.

Newsgroups: alt.ham-radio.packet,rec.ham-radio.packet,rec.radio.amateur.digital.misc,rec.radio.amateur.packet,rec.radio.amateur.swap,sanet.radio.packet

I am trying to find out if two TNCs could be used to transmit data between
two computers and a normal phone line to access the net from a remote local
such as wireless modemsthat are coming out on 900mhz.

Sean

AMATEUR EXAMINATION PRACTICE SOFTWARE

I'm looking for a program called "AMATEUR EXAMINATION PRACTICE SOFTWARE" anything above version 4.1.

This is a program for taking the many of the different ham tests. The version that I have is rather old and looking for something more current. I have version 4.1, from 1994, and need something more up to date.

If someone has the recent version of "AMATEUR EXAMINATION PRACTICE SOFTWARE", can you PLEASE email it to me?

Thanks..

James

Don't be a baby! If you shop around a bit and if you knew anything about
HRO
you would know the following:

1. In most cases HRO will give you the same price as anyone else. Just tell
them
who has it for the lower price and they will come down to that price.

2. They charge shipping for any order under $100.00.

If you don't do your homework when you are ordering, than don't cry when
you don't have a clue what the final price is. All ypu had to do was ask
what
the total was. If you don't like the price, SEND THE ITEM BACK!!!

Rocco

Hello everyone,

Does anyone know what happened to the project of linking MIR via
TCP/IP packet radio? I subscribed to their list but have not received
anything.

Paul, VK2THN.

The usual thing: a lot of messages during the first two weeks, where
everyone said how wonderful it would be. Not much thereafter.

You probably subscribed too late to catch it.

Rob

Given all the problems aboard MIR (and the possibility they will have
to evacuate due to the coolant leaks), I'd guess it will be unlikely.

I have a 386SX16 laptop, it has 1meg ram, 80meg hd, mono vga screen. Comes with carry case, pwr/charger for home and cord for pwr/charge in vehicle.

Used this for portable packet and tracking sats while out DXing.

Asking price is $250 obo plus shipping.

Thanks de N7RCM....Juan in Las Vegas

Working on a baseband sub-processor for killer homebrew rig and need some help: I know of the following commonly used signalling formats - are there others? Especially looking for formats that are public or at least published somewhere. The following list contains lots of (R), TM, etc. - ownership as applicable where not noted:

Continuous Tone Coded Squelch System (CTCSS)
Digital Coded Squelch (DCS)
Single Frequency, Two-tone Sequential like
  Motorola Modified General Encoding Code Plan
  Motorola General Encoding Code Plan
  Motorola Code Type Assignment Method
  Metro-Page 10 and 100 Code Plan
  Motorola Sub-Audible Code Plan
  Modax / Moden / Alert Center Code Plan
  GE Code Plan
  Quick Call (Code Type Y)
  Decimal Digital (5/6) Paging
HF AIRINC SELCAL 2+2 Paging (aviation)
DTMF Code Squelch / ANI
DTMF Paging (the nnn*mmm kind mostly amateurs use)
DTMF Messaging (the Kenwood kind; anybody know if it's on-line anywhere?)
ASCII ANI
Trunked - Motorola
Trunked - Logical Trunked Radio (LTR-E J Johnson)
Trunked - EDACS (GE)
Trunked - SmarTrunk
Single-frequency Inversion
Split-band Frequency Inversion
CODEC means, like Moto ASTRO, SecureNet, GE SecureGuard, etc.
AX.25 Packet (HF, VHF, 9600 baud)
RTTY (all modes, shifts, etc.)
CW (A1 and A2)
SSTV (all modes)
Digital Selective Calling (maritime)
Emergency Alert System (new) and EBS (old)
IMTS (is this still on the air anywhere?)
Station control tones like
  Non-Simulcast Key Command Function Tones
  Simulcast Key Command Function Tones
  Station Group Disable (Knock-down) Tones
The International Radiotelegraph Alarm (maritime)
The International Radiotelephone Alarm (maritime)
Class A/B EPIRB Sweep Alarm

Thanks!

several months. For between $230 and $250, you can buy the Garmin 12xl
brand new and 12 X the machine that the 40 is. (12X because it is a 12
channel reciever as opposed to a single channel like the 40. Check out
 News group sci.geo.satellite-nav for answers to most GPS questions.

This is external/power cord andis upgradable to 33.6 or 56K. It is in new
condition only used for a couple of days. It is also plug and play. This is
a voice modem so it also serves as an answering machine and has audio
in/out ports. Price is $65+shipping.

Thanks

When I found them I thought "Great! Native OS/2 Packet programs."
Sad to say, I've tried them both and neither program worked with my
KPC-3 (although they might work with a MFJ or other true tnc-2 clone).
So I use Paket 6.1 (dos). It runs fine under OS/2.

This is a general use GPS. It has a sequential 8 ch receiver and will store
250 user waypoints. Backlit screen, external power connection port and
data/ computer interface port. I have the manual and case. You can scroll
through 4 different navigation pages. This unit is in new condition and
$115.00 + shipping takes it!

I did a re-install of Winpack 5.4 (and yes, I know 6.2 or later is out) and
whenever I go into mail options and select TPK mode I immediately get 'error
-- out of stack space'. hit ok and winpack closes. I had this error previously

and somehow got rid of it but I don't remember how or what I did. I am running a pk232mbx running winpack under win-os2 (I run OS2). Anybody got any ideas? Inserting the statement 'stacks 9,256' or whatever it was, is unnecessary in os2 and besides, doesn't help.

Does this come with any options included ie interface cable etc?
Also, this unit has an external antenna connector?

Hello,

Could anybody tell me if you know of any sites where there is maps within
Great Britan to download into APRS or if there is anybody who has made any.

Thanks in advance for any information

Is there any significant level of use of APRS anywhere in the UK?

Only Cheshire- during Operation Frostbite I think.

I think we should 'designate' a frequency for it - 4m might be a good
candidate- or perhaps a bit of 70cm - but till we have that, it isn't
going to 'catch' - if it appears on a regular channel chances are you'would
have to have your radio surgically removed. Packeteers can be a touchy lot in my
experience....

I'd like to get into some 'live' packet - cos the internet does what packet
did so much better- and I miss the keep .675 live bragade etc...

I think it really needs a frequency on 2m. However, there's just been a
new UK 2m digital bandplan announced, perhaps it includes a specific
recommended frequency for APRS? Seeing as it is so popular in the USA,

I'm sure the RSGB will have realised that there was likely to be some
interest over here within the foreseeable future.

If Packet nodes and BBS's sent their position in the Beacon Text as
suggested by the author of APRS, then a cheap and cheerful means of
frequency planning/ node activity monitoring would be avaliable.

Its dead easy to set up the text string in your Beacon text, you can
also inclued details of your o/p pwr, ant height, etc so that anyone
monitoring using APRS could see the effective range of a station, Node,
etc.

You don't need a copy of APRS to send your positional data, just to
monitor other stations would a copy be required.

I agree. But users are discouraged from setting beacons round 'year because of
bandwidth. I can't see these folk turning anything other than purple at this (IMO
most excellent) idea.

BEGIN -- Cut Here -- cut here
Am interested in an off-the-shelf software package that will do the following:

1. Receive incoming RTTY traffic (300 bps ASCII , 7 bit data, odd parity) thru one of the PC's COM ports.

2. Capture and store traffic as individual text files on the PC's hard disk. The 4N's sequence (NNNN) shall be used as EOM marker.

3. User should be able to retrieve, display and print these files according to subject, date or text search string.

4. Some selcall capability is also desired, which means that only text files that contain a user-defined text string are saved on disk, others are ignored.

Comments, remarks and suggestions welcome.
Thanks in advance.

USAF Academy Falcon Gold

Mission Data and Telemetry
Description

Signal Electrical Characteristics

The downlink frequency for Health & Status and GPS data is 400.475 MHz. This is accessible by most scanners and 70cm amateur radio gear. We're using slightly modified Tekk KS-960 transmitters to modulate the digital data stream from a Kantronics KPC-9612+ node controller onto the FM carrier with about 3.5 KHz deviation. This Direct Frequency Modulation (DFM) is a Minimum Shift Keying technique that's standard with the amateur radio community to send 9600 bps data, as developed by G3RUH. If you have a scanner, use the "FM-narrow" setting (but see the caveat below). To your ear, it will sound like a rush of background noise.

Each bit of the the bit stream from the AX.25 protocol routine occupies 0.104 microseconds. But before sending to the radio, it's converted to an edge-oriented signal: a one is converted to a transistion (either 0 to 1, or 1 to 0), and a zero is converted to a no-transition. This wavetrain, in turn, is XOR-ed with a 4800 Hz square-wave. (Notice that each half wave -- a high or low pulse -- of the 4800 Hz signal corresponds to one bit time at 9600 bps.) Finally, this signal is appropriately attenuated and fed to the radio as the actual "audio". The amateur radio community 1200 bps format is the same except the last waveform is used to select either a 1200 Hz or 2200 Hz tone. For the 9600 bps data stream, there is no base-band modulation into audio 'tones'. The digital waveform itself modulates the radio.

The highest fundamental frequency is 4800 Hz (from either the clock or the data stream, whichever you prefer), but this is a 'squarish'-wave, not a sine wave. The communication channel must preserve amplitude and phase information for signals significantly above 4800 Hz to preserve the proper waveshape. Typically as much as 3 times this much -- 12 to 14 KHz. Most scanners do not have this fidelity and many amateur radio transcievers older than a few years do not have this fidelity. You can use these radios, but the methods to do this are beyond the scope of this article.

Some newer radios have special provisions made just for this fast data. Even an expensive scanner such as the AR-5000 doesn't have an audio signal path that works (even with adjustable audio bandpass and compensation). We use the front panel connector, which provides a signal directly from the FM demodulator.

Digital Data

We use the AX.25 packet protocol, which surrounds actual data bytes with 20 bytes of extra stuff. Unlike standard RS232-ish data,

this is a synchronous format, so no start or stop bit is used. One byte of data immediately follows the previous byte of data. Sometimes you'll hear this called an octet to signify this fact. Similar to serial comm popular in the PC world, within a single octet, Least Significant Bits are sent first. An AX.25 packet is described as follows (A single transmission may consist of multiple packets.):

1 octet - 7E flag byte
14 octets - to/from addresses
1 byte - Control byte
1 byte - PID byte
N bytes of data
2 bytes - CRC checksum
1 byte - 7E flag byte

Notice the 7E flag byte generates 6 consecutive 1 bits. One additional feature of AX.25 is that if the data bit stream itself at any time provides five contiguous 1 bits, the sending station inserts a zero bit after the fifth 1 bit. The receiving station, of course, strips this extra 'stuffed' 0 bit before trying to interpret the data. This ensures there won't be any 7E hex values except as the first & last bytes of a packet.

Each of the 14 address octets is shifted one bit left. All address octets have a 0 in the LSB position, except the last address octet, which has a 1.

Data Content

Falcon Gold will take 40 millisecond snapshots of the the GPS 1575.42 MHz L1 frequency. The RF signal will be downconverted and then sampled at a rate of 2 MHz. Since the C-code (course position code, not the C computing language!) is modulated onto the carrier at 1.023 MHz, FG will obtain a roughly 2x oversampled bit sequence. Remember, Nyquist theory doesn't apply here because we're not regenerating a waveform, but rather sampling individual bits. This process will yield 80,000 bits of data.

52 bytes of header information is tacked on the front of the actual data, yielding a 10052-byte sequence that needs to be downloaded to the ground station. A space-borne microcontroller will sample health and status information from the satellite, collect the 10052 bytes of mission data, and send it all to a KPC-9612+ AX.25 TNC.

The data logged by our ground station will look like that shown below. This is the data format that we can most readily use here at the Air Force Academy. If possible, please e-mail us logs of data in this format.

```

Each packet containing GPS data (#2 through #43) is exactly 246 bytes long, inlcuding the date/time stamp done by the receiving station, and the terminating CR/LF pair. The dummy-data sets shown above include embedded CR/LF characters so the '1's and '2's, etc don't roll off the right side of your screen. Use the MSTAMP and DAYSTR commands (Kantronics commands) to make your TNC do the time stamping shown above, and please ensure your time is within a half second of UTC. Ensure your TNC is not doing line wrapping for the terminal display.

The H&S packets (#1 and #44) will remain a fiixed length for the
mission, but we'll be making changes right to the last moment.
Shown above is the current state of affairs. The last GPS
packetThe first 48 bytes of packet GPS43 are sampled GPS bits.
After that, are 208 bytes of unuseable binary values.

Every four minutes, another 44 packets of information (another
frame) will be downlinked by the Falcon Gold payload. Combining
multiple frames into one log file is fine.

I currently have a Cushcraft Ringo Ranger II for 2 meters. I would like to
TRADE this for a 440 MHz version of the same antenna.

OR ... I have a Hustler G-6 for 2 meters. I would be willing to trade the

G-^ and the Ringo for a dual-band Ringo.

Please e-mail.

Hello everybody

From the week begging 7th July 1997, Cheshire Radio Scouting are helping out on PC97.

This event being held in a College in Crewe (Cheshire England) will allow many Primary Childern to experience radio, as one of the activity bases at this non curricular event.

Under the callsign GB1PC, we will be operating on the following bands /modes.

2 meters (144MHz) Voice 2 meters (144MHz) Packet
70 Centermeters (433MHz) Voice 70 Centermeters (433MHz) Packet
6mts (50MHz) Voice

If you are availble to talk to us you will be most welcome to do so.

The callsign for both voice and packet will be GB1PC and the BBS for the station wil be GB1PC@GB7SAM

Many thanks for reading this, and we hope to speak to you.

alt.ham-radio.hf

I am trying to get my KAM all mode to do FSK on my Kenwood TS-450S. I
wired the plug as directed to the back of the radio (the big 13 pin plug),
but I have no luck getting FSK to work. PLUS, when the plug is in the
radio, SSB goes to crap. There is so much garbage on my signal, you can't
make out any voice, even though kenwood claims that the two are isolated.

Any help you can be in getting these two devices connected would be appreciated.

Hello everybody.

After looking at the "new" palmtops with windows CE on them I feel it is a good way of "unlocking" the computer from simple tasks as 4 people seem to want to use the computer at once at the momemt.

Anyway I was wondering if anybody knows if it is possible to use one of these to work on packet radio (specifically the HP 300/ 320LX or the cassiopiea) and what software /hardware is needed.

Many thanks in advance.

 I recommend you go for the Psion - either the 3A or 3C. There are plenty of packet, sat, log and other ham radio type programms for them. They are great machines but to be fair, I am biased as I have a 3A. Go for it !!!!! :)

Stephen

have you looked at the PROCOMM PLUS COMMS SOFTWARE ??

I have used this software to handle news wire text at various baud rates
and to look for catch words in the file headers for saving files to disk.
The script language for programing procomm plus iseasy to use to set up the
for your requirements.
I think DATASTORM is the software house that wrote procomm plus try a
search on the Net.
 If you require other info please e-mail me at tonyfay@indigo.ie

regards, Tony EI6EQB

Barry, read it again, carefully this time. He isn't selling anything
he is "interested in an off-the-shelf software package that will do
the :following:" I take it he is lokking to buy something.

So....... as you say,.

"It's better that you find out now than go around thinking you have
acheived something."

Steve

This is not one of those "Get Rich Quick Schemes" or "mail-order Schemes". But enough to pay off your debts and who knows, you could be test driving the new Mercedes in the next three months. If you're too eager to read what this is about then go right to the Instruction Section at the bottom of this article.

READ ON. If it doesn't make sense, read it again and again until it does!

****

Hello! I've got some awesome news that I think you need to take two minutes to read if you have ever thought "How could I make some serious cash in a hurry???" , or been in serious debt, ready to do almost anything to get the money needed to pay off those bill collectors. So grab a snack, a warm cup of coffee, or a glass of your favorite beverage, get comfortable and listen to this interesting, exciting find!

(If you're reading this on-line, I suggest that you QUICKLY download it to your hard drive FIRST, just in case some do-gooder takes it off the news board. You can always read it with a text editor, like Windows Notepad. Also, you will find this copy on your disk to be most useful, as you will later see. Just use the File: Save As command.)

Let me start by saying that I FINALLY FOUND IT! That's right! I found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes like multi-level marketing, mail-order schemes, envelope stuffing scams, 900 number scams... the list goes on forever. I have tried every darn get rich quick scheme out there over the past 12 years. I somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa... I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT.... I thought I could sniff out a scam easily. WAS I WRONG!!

...I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought... "Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50,000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious.

Ok, so the $50,000 in cash was maybe a tough amount to reach, but it was possible. I figured that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail' for you e-mail fanatics) a ten dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first person on the list, then i moved #2 to #1, #3 to #2, #4 to #3, # and then moved #5 to #4, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in... prepared to maybe receive about $1000 to $1500 in cash or so....

But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world - Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $32,343!!! I couldn't believe it!!

I now have a brand new white Audi A4 to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of!

The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five 1 dollar bills to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY, EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE ONE DOLLAR BILLS IN THIS AMAZING
MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the most detailed, yet straight-forward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

****

*** (THE LIST OF NAMES IS AT THE END OF THIS ARTICLE.) ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed. (Not that it's difficult or anything.)

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus makes it completely legal. You are not just randomly sending a one dollar bill to someone, you are paying

   one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot #3", just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a one dollar bill, (no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will ensure its arrival to its recipient. THIS STEP IS IMPORTANT!! (Otherwise, some unscrupulous mail delivery person may see what's inside and start helping himself to all the thousands of envelopes arriving!)

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the

first name from position one and move everyone on the list up one slot on the list. Position #2's name will now move to the position #1 slot, position #3 will now become position #2, #4 will be #3, #5 will be #4. Now put your name, address, zipcode AND COUNTRY in position #5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards, message areas & file sections as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. DON'T ALTER THE FILE TYPE, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. (Do NOT use the WordWrap option. It will screw the margins up!) If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file, i.e. CASH.TXT, and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like... "Get one million dollars flooding in your mailbox in two days!" You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON ITS WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

****

What that means simplified is:

1) Send $1 to the people on the list

2) Put your name on list

3) Post list everywhere you can

4) People send money to you because your name is on the list

GOT IT!

Not f****** much!

Puleeeez, re-arrange the following words into a well known phrase
or saying,

OFF   PISS

Also try to stick to the relevent ngs of alt.twat.seeking.twatter.twat
and alt.alt.alt.alt.tosser

You will be in good company!

I thankyou.

Still hoping to find a schematic for the KAM Plus TNC.

Any help appreciated. Have checked all the Kantronic web site listings
and no luck. Would like to fix own instead of sending in for repair.

Thanks!

Hello all:

We'd like to invite you to visit a couple new Web Sites, dedicated to
Amateur Radio.

The first, The KB8TNQ Ultimate Amateur Radio Page! is a great source

for items of Ham interest. With links to a variety of other Ham Pages,
as well as a weekly update with a "Site O' the Week" and Weather-Related
Sites, you'll enjoy this one.

And the second, The Central Michigan Amateur Radio Club Web Site is
mostly about the club itself. However, a new page, the "Trader's Page",
is something we are starting to get some interest in. If you have ham
gear to sell and want a FREE place to list it, this is the place!

7-3 and we look forward to seeing you soon,
Jim (KB8TNQ)

Yeah, but why don't you save the time and just post the site? Maybe I
just want to save the URL and look at it later.

Sorry but I can't see any "WEB SITE" names, just "EMail" addresses,,,

Again,,, "Where are they"??

Bob.

WANTED:

My father is filing a 610-V to get his original callsign back. The FCC has been dragging thier feet with this one. They tell me if it gets denied that he can re-file with some sort of proof that he once held that call. I need to get a copy of a page from a 1957 or 1958 callbook that lists:

K8BDB as Edward L. Kopp in New Philadelphia, OH. I already have a copy of him as KN8BDB, but K8BDB is the call he wants.

If it's something you can scan and send to me, that would be great. Or yo can send it via US Postal Service to:

Greg Kopp KG8O
12508 Bangor Avenue
Garfield Heights, Ohio 44125

I would be glad to pay the cost of copying and postage.

Greg KG8O

To Doctor Bob and Steve, in particular (and anyone else, in general)

If you simply click on the blue, underlined text in the message, this is
a hyperlink to both sites. If you've never used one before, they're
kind of cool....cuz you don't have to remember a URL, you just go.....

Hope this has been a help to the two of you. And we look forward to
having you stop in soon.

7-3,
Jim KB8TNQ

Jim. I don't want to appear a pain but, there is still no URL either in blue or any other colour.

(NOT wanting to teach you to suck eggs, but...) You must remember that most of the users only have a 'normal' ASCCI text type of a news reader programme. They can't read hypertext messages (Like what you are posting in)
Many people use some form of 'Off Line Reader' (Like I do) not using Netscrape or Microsloth Explorer and have to download every message all in one go (mail or news)

I would like to have a look around your site, but unfortunatly it still eludes me. (I've got an Amiga Ham site link from my site, give us a link if you want?)

Feel free to post it here or send it to me direct. Thanks Jim.
(Post it in normal ASCCI text please!)

I didn't want to mention it, but it's worth noting that a lot
of us OFs use a plain ol' Unix reader, not one of these newfangled
GUI gadgets. ;-) Heck, when I was a boy, I had to walk through
deep snow, 5 miles to school--and it was uphill BOTH WAYS!

:-)

It's not a big hairy deal, but the truth is, a LOT of folks
still use the primitive text-based readers we grew up with before
all the AOLers started showing up with.

BTW, that snow I had to walk through, to school? It was in

South Louisiana--and since it practically never freezes there,
it was one UGLY snow to have to walk through! ;-) 73!

John: Sorry for the trouble. I was informed of this last night and
re-submitted my addresses and a note this afternoon. if you will look
for the new post, I included only the URLs for both pages, eliminating
the links.

I apologize again, and since I am new to this environment, I assumed (I know) that everyone saw what I saw.

Thanks again and I appreciate your help....BTW, the egg lesson was great, but the snow job is gettin deep....hi hi

I never found his "hypertext" link either and I am using Netscape to read newsgroups. I did however find his site (on my first try) with the Altavista search engine. Where there's a will there's a way!

It is http://kb8uyz.com/kb8tnq/

I'm going to need Internet access from an RV fairly soon. Obviously, I
don't want to have to pay analog cellular phone rates per minute to do so.

I was looking into the DirecPC satellite internet system (www.direcpc.com),
which looks great ... except that it requires a phone line for the upstream
bits; only the downstream bits come down over the satellite dish.

Then it dawned on me. Could DirecPC be combined with packet radio? After
all, the big problem with packet radio for Internet access is that you
can't control what the Internet would send over it, so every packet bound
from the Internet to the ham frequencies has to be hand-screened (at least,
in theory). But if the packet radio to Internet gateway were only being
used for the UPSTREAM bits, and the downstream bits were all being sent via
satellite, then no problem, right? And 99.9% of the traffic would just be
http URLs and telnetted POP3 commands, and the occasional FTP command line;
negligible traffic.

If anybody comes up with a way to make this work, you betcha I'm probably
interested in buying it!

Good idea, but wouldn't re-aiming the dish get to be a PITA? Although I see a lot of small dishes on RV's around here... maybe it's no big deal (autoaiming?).

I like my direcPC dish, FWIW.

Hmmm, wouldn't you be worried about sending your pop passwd in the clear? How about if you telnet into a box... your passwd will be in the clear, too. How about online shopping? I have no problems sending my credit card number over the phone line (even without SSL), but I'd be worried about sending it over the airwaves unless it's encrypted somehow.

Rgds,

Bret

To everybody who has been pissed off by those 'get rich quick'
chain letters that keep appearing in all of the newsgroups.

Do you want to stop it once and for all?

Well here's how. Every time you see one, don't bin it, take
the time to read it, extract the names of the idiots who expect
you to send them money, and send them their letters:

    vvvvvvvvvvvvvvv
    WITHOUT A STAMP
    ^^^^^^^^^^^^^^^

The real beauty of this is, they have to pay cough up the dough,
or admit to commiting A FELONY.

The cost to us is so little, a few cents for an envolope and sheet
of paper, (We do after all want to tell them exactly what we think
of them.) and a little time. For them the cost is penalty postage
rates, which will quickly eat up any profit that they might have
made.

You will never stop people from trying for a quick buck - witness
the papparazzi - by telling them what they are doing is illegal.
But a hole in their pockets, not to mention what their wives will
do to them, should quickly slow the flood to a trickle.

Those of us from outside the USA are especially invited to
participate.

If you really want to rub it in, send them monopoly money,
confederate dollars or some basically worthless cash from your
corner of the world.

This sounds like a fantastic idea. Is there anything illegal
about putting out mail without a stamp? Of course, you must
not have a return address, or it'll come back to you.

Can anyone say that this is legal? If it is, I will do it.

Bull! If you put your return address the letter gets sent back to you.

If you don't put a return address or put someone else's or a phony it'll hit the first trashcan it comes to.

Get real!

Try another trick - the FCC supposedly has a regulation which makes it a crime to send unsolicited advertisements by ANY means other than mail an or megaphone. The attorney general of some oddball state tried to use it to shut down a man who was sending unsolicited political opinions to the governor. Who says attorneys general have even half a brain?

I downloaded the message containing the FCC regulation number but failed to watch where I sent it on my HD. Have to ferret it out the hard way.

Okay, what if we omit the return address AND put
on a three-cent stamp? Will that work? This
sounds like too good an idea to just put down,
let's find some way to make it work. I would
gladly spend three cents to make a spammer pay
twenty nine.

Why not do as with advertiziers who fill up your post box? Send maximum
allowed weight letters filled with teir crap, without a stamp?? That
cracks them quite soon. Send a very expensive letter without any stamp
at all and they have to pay it double :-)

Do you realize that a large part of the reason you only pay 32 cents to

mail a letter from Banghor, Maine to Honolulu, Hawaii is that the Postal
Service is supported to a LARGE extent by postage on "junk" mail? I
welcome it. It takes me precious little effor to toss it in the recycle
bin and then think about how nice it is to have someone else foot much of
the postal bill.

Nobody is talking about junk snail mail. We were discussing
electronic spams. Do you welcome 15 e-mails in your in-box about
chain letter get-rich-quick schemes and nude sites, etc.?

Junk mail, sure. Illegal chain letters posted to several hundred
newsgroups, no. The USPS themselves, as well as the postal services in
Canada and most European countries, have regulations forbidding the use of
the mail service for chain letters. The reason we're getting upset about
them is that we can't just toss them in the recycle bin--they're flooding
the newsgroups and e-mail; as soon as you delete or killfile one, another
one takes its place.

With junk (surface) mail, the volume is limited by the cost--they have to
pay for the postage, the paper, the printing, etc. With internet scams,
they can post a thousand for the same cost as posting one, so why not? And
then a few other people see how many are being posted and assume that it
must be working, because the darn things are turning up everywhere...so
they fall for the scam, too. Unless a few other people step forward and
visibly object to this sort of behavior, newcomers and lurkers will have
the impression that the scams are working, legal, and everyone's doing it.
Hence our objections (or at least mine).

BTW, if you're feeling a bit sadistic towards the chain-letter scammers,
have a look at http://www.clark.net/pub/rolf/mmf/ .

It must be possible to detect by some methods that auser start flushing
the net with a spam? And if so, let him post the first 50 for free, and
send a huge bill for the rest.

The billing mechanism must filter out mail coming from a listserver
though. A list with 10000 subscribers are not a spam mailer, normally.

Wrong, the U.S. Postal Service is NOT publicly funded. My tax money goes
to pay for Medicare and nuclear warheads.

What you mean "we" white man? The post I replied to was referring
specifically to sending postage-due snail-mail to junk mailers. Perhaps
it's my fault for snipping the post I was answering...just trying to
conserve bandwidth ;-)

It is your tax money which pays most of the bill.

Alf Christophersen
alf.christophersen@basalmed.uio.no

That's not quite true, While the U.S. post office is a government agency, it is
the
only agency that is self sufficient, and actually showed a profit in recent years.
I
say just toss the damn letters in the trash and be done with it...you know when
its a
chain letter or get rich quick scheme. You know that they don't work. You know
that
there is no curse for breaking the chain. You KNOW!!!! So just toss it in the
can
and forget about it. Save the stamp and start an album if you want, but, Jeeze,
we're
wasting some good gardening time going on and on with this thread. Ignore them,
break

the chain, and there is no profit for them. Of course that's just my opinion, I could be wrong!

Here's an alternative:

*****LEGAL NOTICE TO ALL ADVERTISING E-MAILERS*****

First Notice

Pursuant to US Code, Title 47, Chapter 5, Subchapter II, 227, any and
all nonsolicited commercial E-mail sent to this address is subject to a
source locator and archival fee in the amount of $50.00 US.
E-mailing denotes acceptance of these terms.

 'No person may: ... (3) Use a telephone facsimile machine, computer, or
other device to send an unsolicited advertisement to a telephone
facsimile machine, computer, or other device.'" [FCC cited CFR Title 47,
Part 64,1200a:3]

Upon receipt of a postal money order for 50.00 dollars U. S. made
payable to Your Name, your snail mail location, the name of your
organization will be removed from the Small Claims action list
maintained at the offices of Small Claims Educational Associates.

Thank you.

For Second Notice - $250.00U.S.
For Third Notice - $500.00U.S.

This is the assessment limit per 47 CFR

That won't work, the law falls under the FTC and they claim it doesn't apply to email, just FAX machines and that type of business equipment. There are a lot of places that have tried that law, but none that have worked as far as I know.

There is a bill in the House right now called Rep. Christopher Smith's (NJ) "Netizens Protection Act of 1997" (H.R. 1748) that is aimed at amending the junk fax law to include email. You can find the text of the proposed law at http://www2.cauce.org/Smith.bill.intro.html

>Can anyone say that this is legal? If it is, I will do it.

It's perfectly legal. However, mail without any postage will be returned
to you. But if you put insufficient postage on it (a one cent stamp,
for instance), it will be delivered to the addressee postage due. However,
the addressee does not have to accept it, and I'm not sure how they would
have to admit to committing a felony to refuse it.

And unfortunately, what usually happens with postage due mail is that it
gets delivered anyway and the mail carrier pays the few cents required
out of his or her own pocket, just to avoid the hassle. Obviously if
an addressee started receiving lots of postage due mail, the carrier
would do something about it, but you'd have to have a concerted effort
to do it.

The best thing to do with this, if you're going to the hassle of actually
using paper mail, is to print out and forward the chain letter to the
postmasters of the people whose addresses appear in the letter. Just
address it:

Postmaster
City, State, Zip

and it will get to the postmaster. The Postal Service likes going after
these guys because the violation is a pretty open and shut case and it

bags them a nice fine.

I picked up a couple of Heathkit HD-4040 TNC's this weekend at the local ham fest. They seem to work OK, but do not have the original ROMS installed. Would anyone have a set laying around the shack they would like to get rid of? I would also be interested in a dump from the roms, as I could burn my own if need be.

Thanks
Dale

Hello all,
Who knows well the little packet modem called Baycom.
I have made 2 of them, and I wanted to know the role of the 4th
inverter, whose input and output is connected on the main chip (TCM 3105
modem)
Best thanks for your help

 It ties the clock to the xmit, see attachment.

>de KJ6WS

That's not quite right. It connects the clock output to TRS, which is
not "xmit".

On the TCM3105, the mode is selected using the TXR1, TXR2 and TRS
inputs. In the Baycom modem application, TXR1 and TXR2 are grounded and
the clock is applied to TRS - this selects Bell 202, 1200 bps transmit
and receive. The TCM3105 data sheet can be consulted for a list of the
other modes available from the chip.

One other point - the Baycom modem circuit shown in the attachment only
drives the CTS output at TTL level. This will give problems with the
comm ports on some PCs. There is a better design which uses a PNP
transistor to drive the CTS and which allows the output to swing
properly negative.

Thanks for the explanation. I've often wondered what
that transistor was for. (Too brain-dead to work it
out for myself).

My KPC9612+ won't come out of transparent mode
when I send it a "break" on the serial line. Any
ideas?

It does come out of transparent mode with three
Cntrl-C, and I know the "break" is being transmitted
because I watch in on an oscilloscope.

I'm about to by a NEC 450/700 or Cassiopea but want to use packet on it. I saw an artical in 73 with a guy doing packet on a PDA. It looked like an HP 300 but it never mentioned the make.

Anyone out there using a HPC or PDA with packet. I own a Kantronics all mode and would like to use that.

Hi Ken,
I am unsure of the Cassiopeia's ability to operate via packet. I don't recall even seeing a terminal program for it. But I am not a WINCE fan personally, seems much too slow for me, with too few applications. The same comments apply for the HP 300 since they both use WINCE, and would thus use compatible software if it exists. But try checking with

some of the WINCE NG's for software availability.

I do know of 4 machines that definitely DO work with packet.

HP 200 LX
Psion Siena
Psion Series 3c
Psion Series 5

I have owned and operated with the latter three, and all work great. The Series 3c I used a program called PocPac written by Roger Muggleton, G0HZK. There are also many other amateur radio apps for the series 3, including CW practice programs and Grey Line clock displays.

(Roger's website is: www.netkonect.co.uk/~g0hzk/)
The Series 5 is a wonderful new Palmtop that just came out this summer, I have used it with packet a few times so far, and new packet software just came out that I, unfortunately haven't had time to play with.
The HP I have not personally used, only seen from a friend, tho it seemed to work quite well.

I am a Psion fan myself, and love their products which are wonderful IMHO. I like the new OLE environment of the Series 5 and think that they would be worth checking out. (www.psioninc.com)

Hope this helps,
D. Nalley, KE4QQQ

Well I use a Psion S3c and a KPC-3 and a Yaesu FT23 (or FT73) for
totally 'battery powered' portable packet.
(And it all fits in my pockets!!)

I'm looking for an inexpensive TNC. Used is fine. I'm going to use it with a handheld or a dumb terminal, so it must have its own internal protocol processor. (I will also need KISS mode for TCP/IP in another application.)

I'm looking for an inexpensive TNC to connect two LANs in my home so I can share a printer (and occaisionally files) without having to run cables between floors.

I am also interested in a completely "portable" TNC (like the small Paccom device) that I could carry with my laptop throughout the house or over to the neighbors.

Thanks!

I'm looking for information about HT's that can be used for 9600-baud packet. I'd like information both about where to find preconfigured radios (if there are any) and about how to modify "stock" radios (like Radio Shack's HT-202) myself.

Thanks!

Nope, deadly serious. To my knowledge, first used on a commercial
two-way transceiver about 15 years ago, which came with "AFC" on
receive. A fault resulted in the behaviour described, then the clever
people worked out what and why. Beats the hell out of changing a
filter, usually only needs one op amp.

Cheers

Peter

I've also seen this technique used in a commonly available broadcast FM
IF strip. It runs a 2nd IF at 70 kHz, and uses an active filter for
selectivity. The necessary 200 kHz bandwidth is achieved by modulating
the local oscillator with the received audio. The actual IF bandwidth
is 30-50 kHz (can't remember the exact figure).

... If (stone != rolling) moss++;

Does anyone have software to use with this packet modem that runs
under windows? (not in a DOS window)

I'm trying to not have to restart in MS-DOS mode every time I want to
use my modem. If I try to run it in a DOS window, it doesn't seem to
work right and won't connect to any of the BBS's in the area. It adds
a weird hum to the signal.

Thanks in advance.

There are some programs working with bycom compatible modems under win.
I use Winpack6.3 with G8BPQ node software as the TNC driver (works great
with the NOD2BAY driver).
You could try WINTSTHOST 1.3 I heard it has a Win TFPCX.

Try on http://www.ej1bbs.demon.nl there are some programs and links to other
sites where you can find some good software.

Hi all,

At the moment i'm a bit "experimenting" with WinFBB, hence the following question:
Does anyone know if it is possible to connect WinFBB with CHLNET via BPQ on the same PC running Window95?
And if so, how can it be done?
I've tried with the available doc's but no succes sofar.... All tips are very welcome!
73 and thanks in advance,
Wijnand PA3HFJ.

I have a heavily modified (enhanced) MFJ 1274 TNC for sale. It has the NB-96 G3RUH 9600bd modem installed, and has a dual image eprom allowing switch selection of either the standard TNC-2 firmware, with KISS and APRS, or the WA8DED Host Mode firmware which many packet programs are

written to use.

I have added a couple of front panel switches.One allows selection of 300, 1200, or 9600 bd operation, and the other selects from one of two inputs.

The 1274 has a tuning indicator and works great on HF packet at 300 and 1200 bd.
The 1200 and 9600 bd capability is used on VHF/UHF packet. With the dual input capability, they can both be connected at the same time , and switch selected.

I also have installed the TAPR XR2211 DCD upgrade kit for optimum performance on busy frequencies.
The unit comes with complete documentation and radio interface cables.

I am no longer active on packet and will ship this unique TNC to an aspiring packeteer for the modest sum of $160.
If interested contact Don, W9SL, at 303/814-1503, anytime, or via direct email.

LOOKING FOR THE LATEST HAM TEST

I'm looking for the latest HAM test for written Element 2
and written element 3A.

My friend wants to get his ham licence but the program I have
might be a little out dated. If someone could send a copy to me
I would appreciate it.

My email address is:

barretta@mci2000.com

Thanks

James

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94 about W5VVI. If you think this guy is benign, think again. What's going on right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

I have a ts-140S and for some reason the radio shuts down if the SWR reaches a particular level. I have tested on various levels from 2.2 - 1.5 and it seems to shut down somewhere around the 2.0 level. So here are my questions:

- Does the radio have a Sweet spot of where it shuts down? I do not have the issues as much on voice unless you throw a real high pitch.
- Is there a way to increase the sweet spot so to speak?

Any ideas or information would be helpful. Just does not seem right that the radio would shut down with a SWR of 2.0, but I could be wrong.

THANKS 73's Tom - N1ZPC

The radio , if aligned and operating properly, will shut down to 30
watts out at an SWR of 3-1 on 20m. That is the alignment criteria.

Two radio that I know of, and I know there are more, are MFJ-8621 Data Radio and the Yaesu FT-8500.

The MFJ is only a data radio, crystal controlled, and they do have a web site.
    http://www.mfjenterprises.com/transceivers/mfj8621.html

I have a FT-8500 which some say I might experiment with after I get a 9600 TNC. HRO has these for $379US currently. I could use it now at 1200 baud.

164) YAESU FT-8500/MH-39, FT-8500 W/ MH-39 DTMF MIC $379.95, In Stock
http://www.hamradio.com/

Currently, I am using an IC-2AT for 1200 baud for my experiments. I am planning an amplifier next with a j-pole antenna. I do have to get into my own house next though before I do the outside antenna w/ amp.

73,
N7FMH

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2

and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
====================

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
====================

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in "Show Codes" no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ß (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a é (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the "WP6.x Export" now reads "WP6.x,7.x Export" in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG"s.

Fixes in 3.5.1 patch
=====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your

system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

Any Moron stupid enough to own a Mac , should get software that sucks , It
your own stupidity to even go out and buy such a machine most software
manufacturers are pulling away from Mac because they are a dying machine.
get a life and buy a real computer !!!

Just a note about problems with IBM machines . Corel does work on them !!!
there maybe bugs in it but I haven't found any yet and I use it every day
ver 5 , 6, 7, and 8.0

Before you shout FRAUD THINK ABOUT SLANDER SUITS THAT CAN ARRISE AGAINST YOU
!!!

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
====================

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in "Show Codes" no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ß (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a é (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the "WP6.x Export" now reads "WP6.x,7.x Export" in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG"s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255

characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is

not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise full of bugs. Don't take my word for it--- check it out for yourself.

What a silly rant, buttressed by the PC (politically correct) Ziff-Davis marketing machine.

If you are going to use a Mac, why not make asute choices regarding what applications function well on it? Many do the WP job emminently on a Mac.

I've been using WPWIN 6.0 & 6.1 for a long time in pers & biz, done all manner of DTP with it, selling several millions in R/E with its ease of producing excellent flyers & brochures beyond the far more costly R/E software. It is a powerhouse product that has more OPERABLE features than anyone can learn in four years (or needs). Support has always been shitty - and it is everywhere unless it's at $24.99 per call - and Micro$loth is surely no better; even their website knowledge base is inferior to their old BBS.

The only beef I've had with WP it it's gargantuan size and resource-hogging - but look at MS Word, a big dog if there ever was one, woth far less to offer (I run it as well - as little as possible).

You'd think someone into the hands-on & tech know-how to mess with BA's would be away from the dumbed-down Mac & Windoze OS's, and into unix, with which you actually control your own box (and have to know something).

Boy, this submitter REALLY helped me fix boatanchors, yes?

Folks

I'm looking for any mailing lists or which is the "best" newsgroup to
follow any KA9Q discussions.

Thanks, Tony

this turn is mine,

i thank the gates of earth, for the fine and coherent work done by MICROSOFT Corporation, its employees, and subsidiaries.

i prefer to have one big monopolistic behemoth of a company dishing out the usual stuff, cause then we know who to complain to.

every time someone, some government, some other whining competitor, some greedy lawyer or anybody tries to screw up a well run company like MICROSOFT, just remember that in 90 percent of the cases, we the consumer have paid MORE after they did it and got LESS in return.

Corel, well, thats just another company that just "aint got it all together!"

they will eventually fail and disappear, hopefully, unless some whining buerocrat with stock or a PAC donation in his pocket tries to "save" the consumers interests !!! ha ah ha!

now i feel better. bye!

For one thing...we have no clue who the hell you are since you are
posting from a hotmail address. So please feel free to feel ignored!
I hope someone with more money and more time finds you and sues your
sorry existence. Or even better pays you a visit with Vinnie and Tony.

So in the meantime...take notice that most software companies web
sites list known bugs BECAUSE THEY RESPECT THEIR CUSTOMERS and they
want to keep the support lines open.
All alive humans breathe, and all software has bugs. Period.

You are out of order posting a mental barf like this.
Maybe you are frustrated. maybe you are mental. maybe you are a barf
and nothing else.

Go away and don't waste my time.

Say Hi to Vinnie. (if you see him coming)

I'm tired of playing with these toy tnc's.

I have recently obtained a T1 DSU/CSU, and am looking for like minded
people who are also tired of playing with toys.

Is there anyone out there with experience doing T1 data on 5, 10, or
24 GHz? I could use a few pointers. I am wanting to focus on these
bands, because antenna gain is high for a small dish [18-24"], and it
could be operated portable.

Please answer this only if you are serious.

If we are to take amateur radio into the next millenium, we really
have got to get rid of the toys, and move into some real data
experimentation.

jim

Hmm, wouldn't the data transfer rate of a T1 be twice the limit of 53Kbps?
Maybe I'm wrong, but I thought there was a limit on wireless network
speed....

Here are some of the technologies. No, this isn't
a sales pitch, just some of the bandwidths we
install and all of them are off the shelf.

2.4 GHz   Dual T-1/E-1
2.4 GHz   1, 2 and 4 mbps Ethernet
6 GHz   Single T-1 up to 6 T-1, DS-3 (45 mbps) and 155 mbps (STS-3)
10, 11, 23 Same as 6 GHz in addition to 10 or 20 mbps Ethernet and up to
quad T-1/E-1
Laser   155 mbps
6 GHz   Rack and stack OC-3c up to OC-12 (622 mbps)

There's plenty of bandwidth - its the modulation scheme which is important.
Most of this stuff is QAM.

The ONLY limit on speed in a wireless network at this point in time is
your Wallet!

I don't think there's ever been any shortage of experimentation ...
just that the equipment costs haven't come WAY down and been
made widely available. It would seem that something along the lines of a $200
radio/modem combo that could work as a node or terminal would be required to
get a mass movement away from 1200 baud.

If our computers were keeping down with the tnc technology/status quo we'd all
still be running 8088 equipment.

Something I thought might inspire some movement would be a set of microsats -
one always visible - on an equitorial orbit (like the fialed french bird)
which simply 'repeated' normal packet bbs traffic at 9600 bps (or faster).
Reception with even a scanner would be possible. Just a thought but some sort
of project that doesn't require a '$erious$' satellite station to play.

Jim,

The Tucson Amateur Radio Packet Radio club has been experimenting with

19.2K, 56K and higher speed packet equipment. Check out:

    http://www.tapr.org

There is also commercial off-the-shelf units that run in the unlicensed Industrial/Scientific/Medical (ISM) bands at 900 MHz, 2.4 GHz and 5.8 GHz.

Check out:

    http://hydra.carleton.ca/info/wlan.html

T1 speed equipment is a bit expensive, but the 128K and 256K stuff is fairly reasonable and will work over long distances.

Cheers,

Keith Little

Is 9K6 packet possible on a Alinco DJS-41C ?

If it is posible:
- what mod is needed ?
- What kind of TNC is the best for lowe(r)(st) price(s)?
- Where to find discriminator output ?
- What is highest Baycom speed possible ?

If it ain't :

- too bad.................no way......... what is possible ?

Who has expierience with PR on such a handy an can help me out ?

MFJ sells an addon board which does what you want. It's the MFJ-44 (around $19) for the 1278B. I'm not sure if this board will work with the 1278 (non-B) or not, but there is also a MFJ-44X, which is an external unit that will work with both, as well as other MFJ TNCs.

53Kbps is the wired modem topspeed. A T1 can be 24 channels of 64K or a
datastream of 1.56Mbps still somewhat slow...

Eric,

Your radio should work, but you would have to were to take the discriminator output. That can be quite chalenging. What band are you planing on using your setup on? If it is 2mtrs MFJ makes a cheep 5 watt packet transciever which is all set for 9600. If it is 440 or 220, Paccomm makes a 2 or 5 watts xmtr. The baycom will run at 9600, but there isn't, to my knowledge, a NOS driver for it. So if you use it you won't be able to run any version of NOS, but you could run baycom version 1.6 or later. Your best bet for relable 9600 packet is to buy a packtwin card from paccomm with the 9600 baud modem, but that will cost about $400 US dollars. But if you buy a kamtronincs TNC, you will have to spend about the same money, but the Packtwin is the BEST interface available for high speed packet because it goes into an ISA slot in your computer. For info on the Pactwin you can visit the paccomm homepage at: http://www.paccomm.com

Hope this helps,

Chris

1.536 Mbps actually using 24 64kbps clear channels. If you think it
is slow, then feel free to just keep using your 1200/9600 baud junk.
The point I am making here is that T1 CSU/DSU units are reasonably
priced, and leave room for tranceiver development. If you want an
appliance, then just call apple or black box and pay the thousands
that they want.

since we announced fastbreak, i forsee a market glut of used T1
CSU/DSU units in the near future.

the idea here is to keep costs low. 1.536 Mbps is more than adequate
for most anything, you can put several MPEG2 streams over that kind of
bandwidth for "ATV" use, as an axample.. used T1 CSU/DSU boxes go for
several hundred dollars, while these RF network black boxes go in the
range of several thousand...

anyhow, like i said, only like-minded technically adept individuals
need reply to my original posting.

Please forgive my relative ignorance about these radios, but this seemed to be a good place to find some answers. I have two ethernets that I want to connect using a radio link. I have seen many 900Mhz and 2.4Ghz spread-spectrum radios, but I don't know enough about them to make a good decision. I need something with at the very least 128k, but I would prefer a faster link, in the 1-3 Mbit range. The two ethernets are about 3km apart, and are almost line-of-sight..... with some towers I can probably make it, though it would be easier if I did not need to, e.g. something that can handle trees. What are my best options for this?

Thanks,
Chris

Should be 1.536 = 1.544 minus 8 kbits for the framing bits.

Since this was sent to uk.radio.amateur should we not be talking about
E1 at 2048kbps? That's 30 (or 31) channels of 64k, maybe STM-1e would be
better.

Hello,

Thanks for responding to our Press Release. We our excited to announce the all new 1998 line of Ham Radio Repeater Directories. They can be found at...

http://www.rotd.com/worldxn/

These exciting directories are great for Amateurs on the move, or those who would like to take advantage of the many Repeaters in

their Area. We encourage you to visit our site and would appreciate any feedback you offer.

For what its worth , Ive been playing around with NCRs Wavelan Wireless Ethernet cards now for about 3 years , having also gotten totally sick of the incredible slowness of the normal packet radio type modems.
The cards I am using only cost me $500 each , run at 2 mbits/sec in the 2.425 Ghz band and I can get ranges of up to 5 kms using 24dbi gain Conifer mesh reflectors.
The only down side of the NCR cards is that they are now obsolete, and have been replaced with newer smaller half length cards which cost double the price.
I dont see that Amateurs have to use equipment that operates in the ham bands only.
If stuff can be used in the ISM bands as well , why not use it.
Ive also had a pair of Proxim Rangelan 900 Mhz cards running a Rf link from my house to work , (4 kms with a heap of obstruction loss) for over 6 years now.
These cards run at 242 kbits/sec and have sufficient power / rx sensitivity to handle 20 km paths with gain antennas.
I dont think theres any point re inventing the wheel.
The simplest solution would be a transvertor which takes the output of a 900 Mhz ISM Ethernet card and converts it down to 450 Mhz.
The other really interesting option is TAPRS 900 FH modem , which if it is a success will totally improve ham packet radio.
The other promising option is the Harris Prism DSS chipset which provides all the bits necessary to run 2 M/bits on 2.45 Ghz.

cheers
Maurie Daly

> If stuff can be used in the ISM bands as well , why not use it.

I feel the same way. Anybody can use the bands they are designed for as long as the equipment is approved as an ISM device. If the HAM Radio community will not settle on a high speed standard, I think its the radio community's only recourse anyway. While 1200 baud is annoyingly slow, at least it is standard. Its one of the many facets of the hobby that must be addressed before a truly maintainable digital packet switched radio network can come online.

One other thing I think would be instrumental in advancing packet, is a standard way to use packet, like the telephone and cable companies are doing with cable and ADSL. That is, build a modem that makes the medium generally transparent to a single ethernet connection. I had used this idea some time ago in a past discussion here, and I believe I was told I was crazy or asked what use that would be. These companies have basically confirmed my own opinion. Ethernet cards are only 20 bucks or so, now, if you can live with a NE2000 type (most could at link speeds between 1.2Kbps or 56Kbps links). Even a mere ethernet to TNC kiss adapter using a 68000 processor or such could reinterest many in the hobby, as they wouldn't be forced to deal with . Even BBS useage would blossom, and instead of BBS programmers or other programmers for that matter, worrying about their own custom protocol stacks, etc, they could actually concern themselves with quality of interface, network design, etc. It seems to me that on the hardware and driver level software of packet radio, must experimenters have been content to redesign the PC interface everytime a new high speed device is introduced. To move forward, this is quite unacceptable. I guess its more of a mentality I also admittedly suffer from as a engineer-- it wasn't built here.

These are the fields I could assist from. There are many other problems that need to be addressed by others more skilled in those areas than I, like RF engineering and the social engineering of the society. Join in, it could be fun....

Hi there,

does anyone now how to modify the IC 2350 for 9k6 PR FSK ?
The Manual says, there is already a "detector out" pin on the mic-jack, but it seems to be a simple amplified and squelched audio output.

Also I need to know where to apply the tx-nf from the modem.

Tnx in advance, Dirk.

Just for interest, we use a full duplex, point to point, 10Mbps ethernet microwave link at work. It runs in the 23Ghz band, and up to 10 Km (limited by ethernet timing limits).

Inside it has a gunn diode for the transmitter, which is FM modulated by the diode voltage (really simple circuit!). No special modulation as far as I can tell (just takes up lots of bandwidth!).

Another gunn diode acts as the Rx local oscillator, and is mixed down to an IF at 144 Mhz !!! (did a ham design this?). The IF runs down coax to a control box which has the IF FM demodulator in it.

The RX frequency is 1.2 Ghz away from the TX freq, so it has a few isolators and filters to run both on the same dish.

All the Gunn diodes are free running (ie no frequency control, just a little AFC in the IF), although the RX LO is temperature controlled by a heater.

Pretty simple really. Now if only we could find some surplus microwave gear that would tune to an amateur band.....

From the description, I guess that it requires a very clean path
between the antennas (no obstacles within the first Fresnel zone). The
problem with simple FM/PM based systems is that it is quite sensitive
to multipath, so you really need a clean path with highly directional
antennas.

An FM-ATV signal has a similar baseband bandwidth and try to display a
picture with fine details (such as small text) when the path is
non-ideal (e.g. moving objects, such as cars, within the Fresnel zone
or even indirect paths).

In amateur use, finding clean paths can be quite hard, when the ham
density is quite low. A modified ATV repeater located at a high place
might be useful for creating clean paths.

To use indirect paths at any reasonable distances, a bit power is
required than is available from a Gunn diode and a more advanced
modulation method is required to combat the multipath.

I have thought about the idea of using the networking capabilities of
digital modes to advantage. In other words, using microwave at high
speed to form a backbone between mountain tops, and linking that to
lower frequency (in the 70cm or 23 cm bands, say, maybe even the
standard 1200 etc at 2m) for user access. In a sense, a bit like hoe
the Internet turned out, very high speed backbone, with most users
dialing in at 33.6 or slower.

... 87.49765% of statistics aren't as accurate as you think.

There could be numerous cause
1. make sure cable from pk232 to computer is tight
2. when running software make sure pk232 is ON
3. If the above two fail open pk232 up an remove battery, wait 5 mins
replace battery (with a new one hopefully)

one of these should clear problmn

I use a Kantronics, but I think I would check the cable. Is it the correct cable for the radio? are all the lines connected, or do you have a line shorting or not connecting? If you built the cable yourself, make sure all the connections are good.

good luck,

The PK-232 startup sequence lights the 4 lights on the left, then after a
second will light one of the operating mode lights on the right. Baudot comes
up after a hard reset (see your manual for doing the reset).

Make sure that the power supply is at least 1 amp.. The 60 milliamp wall warts
are NOT enough. If that does not work call the Service Manager at Timewave and
I'll help arrange a repair (That's me)..

I had the same problem some time ago Jack, it was due to the power
supply dropping to less than 12 volts.

My PK-232 is a bit long in the tooth now but is still giving good
service.

I am looking for mods that will enable Kenwood's
TM-V7A mobile vhf/uhf and the TH-G71A vhf/uhf
handheld to transmit on the VHF marine band.
(Possibly WHICH diodes need to be eliminated)
If you know of such a modification or a web page
that might contain such info - PLEASE drop me an
email. It would be very much appreciated.
Thank you for taking the time to read this posting...

 What you are asking would make your radio illegal ! To
modify a amateur radio out of band makes it non type
accepted and illegal.
And the old story of " I have a licenses for that service "
won't work.
The licenses is to work that band with a type accepted
radio, not a modified illegal radio.
Just go out and buy a Marine Radio.

Dear Sirs.

How to use the TFPCX-driver from NORDLINK !!!!!

Do you have some programs, where the source codes is
included, where I can see how the TFPCX-driver is used.

If you have this, then send an e-mail to me with the
programs and the source codes.

If you do not have this, then tell me where I can download
the programs and the source codes to the programs.

My e-mail address is jan.christensen@riva-group.com

I hope to hear from you.

Best regards

Jan Christensen

VENTRONICS COMMUNICATIONS
Ventronics Communications has just opened in beautiful Wood Dale,
Illinois. We are a 2-way radio shop that deals with 2-way radio sales,
service & installations, but we don't stop with 2-way radios, Ventronics
sells communications for all types of applications. Ventronics is an
authorized Airtouch Paging dealer with service at only 4.95 per month,
WITH NO ACTIVATION FEE! Plus, we offer cellular phones, car stereo
sales/installations, radar detector installations, school security
packages, NEXTEL, and almost everything else that deals with electronics
& communications! Please call us with any questions your may have at:
(630) 766-9800 or FAX: (630) 766-9803 and please visit online at
http://www.ventronics.com

Well,

Congratulations. You've just insured that I'll never do any business
with you. As for the products you sell, well - I've done very well with
out them so far and you can be assured you've given me even more
insentive to avoid them in the future.

Take it to the papers fools

ateur.packet
X-MimeOLE: Produced By Microsoft MimeOLE V4.72.3110.3

I am trying to get an IC-746 to work with a KPC-3. I'm running in to snags.

I have wired up a cable from the TNC to the radio. Continuity checks out
okay. Schematics (pin-for-pin) looks okay too.

Here's the dilemma...my rig can xmit (i.e. xmit light on both radio & TNC
light up). AND, my rig can receive the signal (i.e. the receive lights on
both the TNC and the radio light up). BUT, the CON [connect] light does not
light up AND the terminal program detects nothing.

My KPC-3 also "hears" nothing. When I type in MHEARD, nothing comes back.

==========
QUESTION #1
==========

Could this be a cable problem OR a TNC problem?

==========
QUESTION #2
==========

Anyone have any great ideas? I've been working on this for oodles of hours now, and not ONCE have I connected to a node. Incoming signals are booming, but there's no life on my end to connect.

HELP!

73 and tnx,

Tod N9ZWY

FS: TEKK KS-900 "T-NET MICRO" data radio

For data only TX/RX 1 Channel XTAL controlled
9600 Bps ready (Per TEKK)
Very small 3.5x2.1x.8 inches, about 2 match boxes side by side in size (5
oz)
2 watts at 9.6 v / 20ma (4+ on my bird 4381 or 43 at 12 vdc)
BNC connector(ant) and db-9 (power, ptt, data in/out)

Currently on 467.xxx mhz, TEKK says it can be re crystaled for 430-470

New units cost $185, I will sell this one with all docs for $100 shipped.

I have all specs if you need more info...

E-mail me for questions or call TEKK at 1-800-521-8355. They were very
heplful to me.

This project will be a monumental task, but hopefully the support of all repeater Trustees / Owners / Users will help in this task. I realize there

are places like artsci that have the repeater books and ask for updates on-line, but there are so many repeaters that have been left out.

I am going to interface the data collected with as many of the not only on-line mapping programs, but those that are on cd-rom (AAA DeLorme Map'n'Go
for example). The project, when completed, should allow you to enter a route
from point "a" to point "b" and show all repeaters within a selectable distance
from your route with the selected parameters.

EXAMPLE: I want all 2 meter and 70 cm repeaters that are/have:
1. a phone patch
2. open
3. linked / crossband system
4. emergency power
5. LiTZ

The graphical view would show selectable icon or number in the exact location
of the repeater. The user can bring up the data for any repeater by clicking
the icon / number and print the information telling you at what Point in your
trip the repeater is within the range you have selected and when you will be
out of the selected range.

Please send the information ONLY ONCE and I ask that ALL information listed

below be 100% exact (only makes sense to have accurate information for an outstanding system). I also request that, if at all possible, ONLY the OWNERS
and TRUSTEES submit the information (they would have the exact data needed).
Any information not received for repeaters listed in The ARRL Repeater Directory may or may not be included in the program. I will publish a listing
of the information on The METRO Net homepage so you may see if your repeater
information has been received and who submitted it. If there are any other

suggestions for information that should or should not be included, please include comments.

INFORMATION NEEDED (100% complete will only be accepted):
State:
Closest City/Town:
County:
Grid Coordinates: (mine is EM58BN)
        [take a look at Buckmaster { http://www.buck.com/cgi-bin/do_hamcall

Do you know if there is a (probably 9.600Baud??) Modem on the market which
can do a transparent data connection under Windows 95?

Please eMail: Rinninslan@aol.com

Thanks,

This is my first time posting to a NewsGroup, so I hope I get it right! I have an old radio that belonged to my father and I would like to know more about it (when made, amount produced, value etc.) Can anyone out there help? Its a General Electric X-371 Receiver. It is a large table top radio 24inches wide, 15inches high, 15inches deep and weighs about 50lbs. It has a magahony cabinet with front speaker and shows 12 bands in a semi-circle in a front window. With it I have a booklet called "International General Electric Radio Handbook" produced by World Radio Handbook, this was prepared by O.Lund.Johnansen of Hellerup, Denmark. This radio would have arrived in our house about 1957-58. I live in Newfoundland in Canada and am interested in setting up the radio to listen to shortwave, and I would like help on type of antenna which would be best, cheapest, easiest to set up? Any help would be appreciated, thanks

That's sounds like a great radio. It was probably built before WWII,
in the 1930's. If the tubes are still good (and they *should* be), it
will give you many hours of pleasure. I would use a long wire antenna,
and be sure to ground the chassis IF there is a connection on the back
of the chassis. Be careful, though, some of these radios had a *HOT*
chassis (one side of the 115 v line is on the chassis)

Hi Don,

The simple antenna solution is to hang as much wire in the sky as possible.

Make it easy on yourself at first, and do it in stages until you see no further improvment at the lowest frequency you are interested in.

There is a more serious issue to be taken care of before the antenna. If this rig has not been turned on in a number of years, there may be a fire hazard. The filter caps in the power supply are undoubtedly getting on, and these items do not last forever. Flipping on the radio may give you a hiss and several stations, and give the impression of being in a working state. This may be a false security. There may also be no problem. The compelling evidence will be a small explosion (fully contained within the radio) and smoke and/or flames afterward if not unplugged.

The technical solution is to plug the radio into a variac and sloooowly raise the variac output over a period of hours (or days) from 0 to 115VAC. This will allow the old electrolytics to re-form their chemistry (if you are lucky) and let life continue as though no years have passed. Many of these radios work quite well after this slow wakeup call. Simple evidence of how robust they are is in the amount of 60/120 Hz hum you hear with everything turned all the way down. This can vary from zilch to Mt. Saint Helens rumble. Anything above 3 on the richter scale suggests replacement of these power components ($20 for parts (before markup) and $100 labor).

73's and happy DX'ing

Try the rec.radio.amateur.boatanchors newsgroup. (boatanchor is the
affectionate name given to old, heavy tube radios.) There are a lot of
enthusiasts of old radios on that group. Someone there can give you
info on your X-371.

Agreed.....

But runing up with a variac also reduces the fil voltage...so while it
puts less B+ on the caps it also reduces tube life...they dont like
being run at a lower voltage and develop "Cathode Scaling" (junk
deposited on the cathode that requires a period of OVERvoltage to
remove).

I always break the center tap of the B+ transformer and insert a series
of resistors, starting with 1Meg for a day, then 1/2 Meg..and so on thru
a few K until the Caps are fully reformed....

Of course if the poster of the origional int a teccie he could be
(un)pleasently shocked during the process!

This handbook is probably a collectors item. Johnansen is the
original editor of the World Radio and TV Handbook (WRTH) that
we buy every year. This year being the 50th year of the WRTH's
publication, they had a historical article about Johnansen and
his Handbook.

Enjoy!

Hi Rex,

The effect on the cathode you are speaking of is from long-term variations of nominal operating voltage. As to the life expectancy, it is quite the opposite. The age of a filament varies by the fourth power of the current applied to it. A 5% reduction of current will lead to a 22% increase of life. However, this is not a practical application for us given such life considering measures also have an impact on the cathode's ability to boil electrons off into the plate current. The cathode scaling you speak of is oxidation and a sign of the cathode being cool. I've commonly "descaled" cathodes by applying 1-2 Kv between the cathode and the first grid for 10-20 seconds, and minutes for a tough dog. These measures are of course last resort attempts not ongoing maintenance items.

Another posting alerted our friend to the ground hazard that may exist. This is a very real threat (it is a 70 V problem derived from the early practice of tying both side of AC mains to common through noise capacitors). When I was in the Navy, I was in charge of a TV/Radio repair project the Navy put on for S.F. charities. We took in 300 TVs and 200 Radios and turned out 125 TVs and 180 Radios in two months with a budget of $50. This was, for my students and staff, the University of Hard Knocks advanced studies program. Real electronics, not blackboard electronics.

One student learned about this hazard the hard way. He assumed that because our ground buss was so long, that it would support TV signals by merely attaching the antenna lines to it. I commended my student for his intuition as he plugged in the TV. We watched as the insulation on the wire drooped off like snow from a telephone line; smoke followed, and then a cheery red glow. It was very instructive (and one reason why I taught my men to keep one hand in their pocket, or behind their back; at sea, everything is at ground potential except you, the load).

>dpoynter@avalon.nf.ca

Don - This sounds like an interesting radio. It shouldn't take much of an
antenna for you to get European stations. You could get a 20 foot (7
meters) length of any kind of wire and hook it on to the antenna
terminal(s) and see what happens. It would be helpful to know what kind
of terminals are on the back of the radio. Also, when you start using it
for more demanding applications (like SW), you might find that some of the
tubes are too deteriorated to perform well. They may need testing and
replacement.

What does the "International General Electric Radio Handbook" say about antennas? Is this a manual for this radio, or a general short wave manual?

Cheers

Dave, K9SW

Chris,

Check out ftp://ftp.ucsd.edu/pub/hamradio/packet
or ftp://ftp.cdrom.com/pub/hamradio

Those are some of the two biggest ham radio archives
on the net

I have a KPC-3 (eprom 6.0) and a TS-870s (HF) and various 2 meter rigs.
What is the best Windows 95 compatible software? I know of KaWin,
Easyterm, PacketPeT. Does anyone have an article that compares various
software packages? Thanks for your help.

    Well dont know of an article that compares all of the
programs. But I can give you another one to look at

XPWIN support AEA (host mode), Kantronics (host mode), SCS/Paccomm
and HAL controllers. It will also drive your TS870s.

It can be downloaded at the site shown below.

My S.O. and I use KaWin for our KPC-3s and KAM+. I like this software.
It hasn't let me down. Also well worth the registration fee. (Being a
software developer, I can appreciate the value of a good program)

swap

For sale: HAL P38 multimode data communication interface.
Modes: Clover, Amtor, Pactor, RTTY, ASCII, baudot

Manual & PC terminal software included.

Is as new, hardly ever used.

HAL asks $349 for this, will sell for $285, you ship

I will throw in a PC 955 computer for free, made by Texas Instruments, with 150 meg HD.
This is a mini-sized 286 AT compatible which is more than good enough to handle the terminal software task.
This PC is the quietest PC I ever owned in terms of RF noise, you won't notice the difference between ON and OFF

Garry,
Thanks for the reply. WB1ERG, Steve, recommended this program on Friday even before you did! I found it on the Web and have downloaded a copy to try. BTW, I have 2 sons 13 & 15 who are hams. Will the registered version allow us to change the callsign (& create a separate log) as the operator changes? From the writeup, it looks like what I need.

Like computers, like word processors, everyone has their "favorite" and
thinks that the competition is worthless.

Mine: KaGold... without a doubt! Never used it in windows, however, but
the press releases say it works well there.

The program can easily change the callsigns by using the
configuration manager utility. The logbook is kept in one data file however
and is not changed for each callsign. Interesting idea though...

The Terminal program that comes with Windows works fine with the KPC-3.

I have 3 MFJ 1270C's for sale or trade... All are less than 18 months
old. Asking $75 each or trade for newer KPC3's with GPS firmware. I
have the original boxes and manuals. Includes power supply's.

Contact me at the following addresses;

jaykq4ms@ipass.net
kq4ms@juno.com
kq4ms@amsat.org

Thanks for reading......

How do I connect a Radio Shack HTX202 to a PK80 TNC?

I can recieve no problem, but I have to wire the transmit
side... I think it's like an Icom where I run the PTT through
a 3k resistor and the modem thru a 0.1uF capacitor, but I don't
want to blow it up.

Go to oak.oakland.edu, in the /pub/hamradio/mods directory. There is
a document that will tell you how to perform the small bit of minor
surgery necessary to tap the discriminator. I tried it on mine, and
it works fine.

   Yup, it works exactly like the "leaky-PTT" used on Icom HT's.

Everybody is not on the radio. There're on the Internet!

I sign on to the net daily now. At 14.4K compress.

While on Ax.25 it's only running at 1200 baud when no one else is on.
Other the effective baud is only 300 or 100 on VE7LAN.

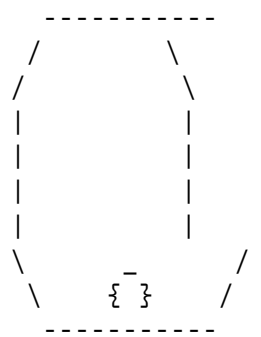
HOW DO I make this INCREDIBLE AM RADIO BOOSTER, for AM DXing ?



Simple Sketch

I am looking for actual plans to build the above AM Antenna Booster device. It is a REMARKABLE device in that it takes no power or batteries, does not actually attach to your AM radio in any way, just needs to be near it, and IT BOOSTS FARAWAY AM RADIO signals like you would not believe ! It also appears to be incredibly simple to build, if only I knew how.

This device, which I have seen once is made of wood, the large cirlce is a hoop of (perfectly circluar unlike the drawing) and about 18 inches in diameter, and the hoop width is about 3 inches, there is a band covered with cork in the middle of this hoop I presume covering copper windings.

The small circle in the bottom of the larger hoop is a small cylindrical device of unknown composition. The axis of the hoop and the small cylinder are parallel. The small cylinder in tangent to the hoop's inside.

There is also a dial that I assume tunes the device.

I hear that it is an inductively coupled LC resonator (equivalent to a small loop) which should be regarded as the primary of a tuned RF transformer, the secondary for which is the ferrite-cored loop within your ordinary AM radio.

They further went on to say that as such one needs to couple them (your AM radio and this device) in the appropriate manner, depending on the orientation of the ferrite in the AM radio (they find its not necessary to put the secondary (your AM radio) into the loop).

Any help and actual plans would be GREATLY APPRECIATED:

The sketch looks just like the "Scantenna" a commercial product that
does work wonderfully. They advertise in PopComm every month. The unit
is housed in a plastic case. It would probably cost you nearly as much
to build one considering the complexity of the gearing for the tuning
device. I've had mine for many years and am using it currenty with a
GE Superradio III. Probably the most inexpensive combo around for
AM DXing. The SRIII is going for around $40 in the Baltimore area
and the Scantenna around $30 (Mail order only)

By the way if you live in the Baltimore area listen to High tech talk
on WCBM 680 on Saturday afternoons starting at 2 pm, theres a store
near BWI that advertises on the show that has a similar antenna
to the Scantenna available at their store that has a no questions
asked moneyback guarantee

Charlie

I'm looking for commercial off the shelf products that can be
attached to HF/VHF radios to turn them into network nodes on a
standalone RF data network. Any suggestions/comments would be
greatly appreciated. The protocol used by the attachments is
not critial, although I would prefer a standard one. Crypto
support would be nice.

I'm not sure where an plain text copy exists for FTP (I checked the
ARRL FTP archive on Oakland for filenames with ax25 but nothing
jumped out.) If you have a web browser you can find an HTML
version at http://ve7tcp.ampr.org/Packet/ax25-v2.html.

----
important legal disclaimer

-you MUST be licensed by your country's telecom authority to
set up such a network.
fines and imprisonment are realistic possibilites
for skirting the law.
----
amateur radio frequencies are regulated by the ITU, and are
for amateur use only for non-commercial , non-business
purposes only

---
amateur radio digital modems, however, will work on a wide
range of frequencies, including business frequencies

This is what you want:
(all currency amts USD)
$100.00 to $1000 depending on features-
---
essentially a Packet Assembler/Dissasembler (PAD)

Connects between comm port on computer and tranciever.

Advanced Electronics Association PK-232 MBX
(AEA PK-232 MBX) is good, about $500.00
---
and numerous other mfgs and models
---
these boxes are designed for use in amateur (ham) radio
but there is nothing amateur about the performance, price
or quality - work fine on business freqs.
---
essitientially no different than commercial gear
costing thousands more, and for no good reason
other than limited buyer knowledge
---
in the ham radio world, a worldwide network moves ham digital
traffic on such equipment 24 hrs a day 7 days a week.
---
available with 1200 baud, 9600 baud 19.2 k baud and 56 k baud
modem

Does almost every protocol you can imagine
---
works with HF, VHF and UHF trancievers
---
supports FM and SSB
---
supports packet (ax.25), pactor, rtty, clover, piccalo,
baudot, amtor, TCP/IP, etc.

Full digipeater support.

Support BBS, ROSE, NOS, TNOS, and JNOS control/networking
bulliten board and routing software.

Incredible wide range of commercial and shareware
software support for any purpose possible.

Hire a licensed amateur radio operator to set it up,
or a licensed commercial radio company.
---
licensed ham operators may not accept payment for work done
regarding ham radio frequencies,and services, but of course

can use their knowledge of radio to earn money in commercial
enterprises.

Good luck,
Jim Licensed Amateur Radio Operator N2NHU in USA

Wire your cable using the specs for ICOM 02AT/RS HTX-202 and it should
work fine. (Mine does, anyhow)

If you don't want to build the cable you can buy the MFJ-5024YV cable
which will fit the Alinco perfectly and work with Alinco/Standard/Yaesu.

I set the TXdelay to 35 with no problems with this rig.

Hi There:

     I have a KPC-3 and a DJ-582T. All it takes is a 3k ohm resistor for
the PTT line to make it work. It is the same as for the Icom 2 at as
shown in the KPC-3 manual. Just use the mike and audio jacks on the top
and you're in business.

I have a DJ-180 for packet. I used the same cable as used with my
Yeasu FT-530. I purchased the MFJ ready made cable fromHRO. Cost
about $15. It is cleaner and easier than making your own for the
price. It also has a ext speaker jack to monitor if you like.

Hello World,

Just a quick message to let you know that I have updated my homepage which contains a whole lot of links for Amateur Radio, Electronics, Computers and other various links.

For a looksie, take a ride to http://gold.iap.net.au/~fraser

You won't be disappointed.

73's to all.

The QSY Society, a new Amateur Radio Organization for the Putnam,
Dutchess and Westchester area will hold its first meeting on Wednesday,
September 11, 1996, 7:30 PM, at the Carmel Ambulance Corps Headquarters
on Vink
Drive in Carmel, NY. (Behind the Carmel Firehouse on Route 52)

The primary goal of the group will be to fill an existing void by
providing an enjoyable forum for the discussion of technical, operating
and social topics of interest to radio amateurs.

Join us and share the Amateur Radio Experience.

You know, this is why we created Ham Radio Online. Ham Radio is actually a heck of a lot of fun!!!! And we are trying our best to report on the fun that most hams (who have not discovered the Internet :)) are having on the air, building antennas, tinkering with equipment, or slogging through a forest on a volunteer search/rescue mission.

Stop on by and enjoy our web site, http://www.hamradio-online.com - now read in 43 countries around the globe.

Ham radio is so much fun that I gave up sex just to call CQ contest
and pass routine traffic.

Yes, This is a more positive role for HF
people. The HF bands will soon be recovering
from the Southern winter so those signals
from the antipodies will be coming through.
Take a look for the home-stations, mobiles.
During the third weekend of October is JOTA,
where amateur radio combines with the
scouting troops and camps, so another
opportunity for some pleasant operations,
with the Worlds Youth - in scouting.
On one occassion I QSO'ed to Tatum Park,
near Mancester, UK. during the period. 73
Winton at ZL3AO.

Hi - visit my new Web Page at
http://www.mnsinc.com/bry/

Featuring:
MEGALIST + HAM RADIO + HOCKEY = Bry's Page!

LOTS of useful information about USA & UK sources of amateur radio & shortwave radio equipment, parts, kits, manuals, xtals, valves/tubes, repairs, modifications etc., and TONS of radio links to SHortwave sites, ham radio sites, Christian & Messianic Jewish sites, and a whole load of really good ICE HOCKEY and ROLLER HOCKEY sites. MANY HOT LINKS!

AND... COMEDY LINKS!!!!

UK to USA English Dictionary. Information about POW-WOW and getting subscribed to the yoth-hockey mailing list, FREE E-MAIL services etc. etc. Something for everyone here!

Give it a try - you'll be glad you did!

Bry

<Picture>

<Picture>***Road Trip To Dayton***<Picture>

The SCARS club is planning a trip to the May 1997 Dayton Hamvention and you can be a part of it (you don't have to be a club member to go).

The trip will include a chartered bus from the Fort Mill / Charlotte area to Dayton, accomodations at Dayton University for 3 nights (May 15th through the 18th), and the hamfest ticket all for only $162.00 !!!

Thats right, you've often heard of the worlds largest hamfest and now you can be a part of all the action, but, you need to respond quickly as we are limited in the number of people that can go so if you are interested, fill out the form below and a member of our club will contact you with all the details.

Just Announced!!!!

The SCARS club will be holding a raffle for 2 complete packages as mentioned above to the Dayton Hamfest as well as $150 in spending cash (or the cash equivalent for non-hams). This raffle is limited to 200 tickets at only $5 each. If you are interested in purchasing a ticket (these will go fast !!!), send e-mail to Jerry Moore (AE4PB) vigilant@cetlink.net

See You In Dayton !!!!!

newsgroups: rec.ham-radio,rec.ham-radio.packet,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

Hello, I am considering to buy a PACTORII unit from SCS GBMH, the PTC-2

See for more information:

http://www.scs-ptc.com/pactor2.html

From this URL I got my information, what I am trying to figure out is if it is really is the very robust digital communication method that they claim it to be, or if it is just another sales pitch.

After all, $900+ bucks is not cheap.

Is there any-one out there that has bought this TNC? What are the
experiences?

What are the chances that pactor-II might be licensed out to other
manufacturers TNCs like AEA?

Thanks,

Loek d'Hont ldhont@ti.com

Too light for a boatanchor. Add a few bricks.
That's the main problem with all this newfangled equipment. Too light.

And too small, too! I believe they should charge by the pound for radio
equipment. Much more equitable.

No doubt about it, Kermit is the best software to use for *any* serial
device! :-)

But seriously, "It all depends on what you want to do." No software does
more on packet than JNOS or TNOS, unless you count Linux with native
AX.25 in the kernel. But is that what you want to do?

Seriously, I used Kermit on DOS and Unix systems, but mostly VersaTerm
PRO on Macintosh for about 10 years. Has mostly to do with the fact I
used those programs for many many other things at the same time and
couldn't see any other reason not to use 'em for packet.

Now most of my packeting is running FreeBSD (Un*x) hosting TNOS.

I have been VERY happy with WinTNC. The only problem is that it does use
KISS mode so my built-in mailbox in my MFJ TNC becomes useless. Lately, I
have been using a GREAT program called PacketPET for Windows. It has a
TON of nicely integrated features, and uses the native mode of yout TNC.
I have been leaving my radio and TNC on 24 hours per day with my TNC
mailbox enabled, and it has been working great.

Of course, I just got a used spare 386 PS/2 PC onto which I'm installing
jNOS. As soon as that is set up to my liking, I'll switch to that as my
24 hour system.

Good luck!

p.s. I can't seem to get TNOS to work with my PS/2. I have loaded both
the most recent versions of the DPMI memory manager and the most recent
versions of tNOS, and my system locks with a "Stack Overflow" error. Back
to using old-reliable jNOS!

TheNet X1J Release 2 packet Node software.
==

I have just uploaded the latest release of TheNet X-1J Release 2
to :-

oak.oakland.edu /pub/hamradio/incoming

Dave (G8KBB) and myself (G0JVU) have been beta testing it for a
few weeks with a selected few sites around the world.

This release includes several new gadgets for X1J node operators
and users.

The node now supports four Analogue input ports:-

Port 1 is for the previously announced Deviation meter
Port 2 is for the new Signal strength meter addition
Ports 3 & 4 are general purpose input ports.

I have used port 3 for a temperature sensor and port 4 for a psu
voltage monitor in my local test nodes. I have included a document
(in MS WORD format) called HOTNCOLD.DOC for anybody who wishes to
attempt to add the temperature sensor to the node.

I would be happy to hear of any other uses these ports get used for
around the world.

There will be no PCB this time! Especially as ports 3 & 4 are user
defined!

Best of luck with the product.

73 Neville

My email is "neville@felixstowe.em.slb.com" if needed.

Well, I'm expecting my license to arrive in mid-January. Meanwhile I'm
looking at equipment. I think I'm going to get the Radio Shack HTX-202
and some type of external antenna.

My question is... What goes on in the world of packet radio? What will I
be able to do if I get a TNC? I currently have a 386/40DX (soon to be
486DX2/80) and a 14400bps modem. I've enjoyed using local BBSs and Internet
(obviously) for a couple of years now. Is packet radio similar? "BBSs" set

up on certain frequencies? If not, what are some of the pass-times? How much packet activity is there on 2 meter? What type of TNC should I get and how much would it cost? I've seen people in this group with what appear to be Internet addresses containing callsigns. Can one connect to Internet via packet?

Also, what is slow scan TV all about? Is it talking normally except with video too? How much does this cost to get into and what bands generally permit this kind of operation? I've already got some video equipment including a camcorder. Am I closer?

For additional info... I'm awaiting a Technician class license. I live in the suburban Detroit, Michigan area. These are generally questions of culture for which I am ignorant. I have a scanner so I can tell what happens on Phone, the others are foreign. Thanks for any info.

Packet is somewhat like an ethernet without the wires. You'll find many
of the sorts of things you find on internet on packet radio (depending
on the interests of the local area), BBSs, newsgroups, file transfers,
etc. The big differences are that it's wireless, and in most cases it's
slow compared to what you are used to over the telco network. The biggest
shock most people get the first time they try packet is how long it takes
to do anything. The 1200 baud packet system is *really* more on the order
of 300 or even 50 baud effective throughput after allowing for several
relays, packet collisions, and the turn around time of the half duplex
system. There are internet gateways from the amateur systems, but because
most of the amateur network is so slow, about all you can use them for
is non-realtime Email.

It doesn't have to be this way, and it isn't in some local areas. There
are systems that operate at 9600 baud, 19.2 kbaud, and 56 kbaud available,
but they don't do you any good unless a *group* of hams all decide to get
them. In most areas, the default 1200 baud equipment is standard, and
slow, but in a few areas the faster equipment is in use. The 56 kb equipment
for example has a throughput very near to 19.2 kb telco modems after
subtracting all the turn around and packet overhead. That's very usable,
and you'd feel pretty much at home with that. At the lower speeds, your
operations will be very different from what you are used to via telco
modems.

>Also, what is slow scan TV all about? Is it talking normally except with
>video too? How much does this cost to get into and what bands generally
>permit this kind of operation? I've already got some video equipment
>including a camcorder. Am I closer?

Slow scan is the sending of still pictures over radio. The B&W standard
takes 8 seconds to send one frame. The color standard takes longer.
You can't talk while sending or receiving a picture, but you can talk
in between pictures. This activity is mostly on HF with SSB radios, but
you could do it at VHF/UHF with FM radios if you find someone else interested
in trying it. At UHF, however, you can send real TV, normal fast scan
pictures like your local broadcast station does. There's a fair amount
of activity around the country with this. Since this is UHF, the activity
depends on what local hams are doing. You can also exchange still frames
via packet in GIF format, for example.

>For additional info... I'm awaiting a Technician class license. I live
>in the suburban Detroit, Michigan area. These are generally questions of
>culture for which I am ignorant. I have a scanner so I can tell what
>happens on Phone, the others are foreign. Thanks for any info.

Since most of the activities you'll be doing will be local (other than
amateur satellite, your license won't allow you to reach far out of the

local area with these modes), it's important to join with the locals and
see what they're up to before investing a lot in equipment. Find and
join a local ham club. Different ham clubs have different interests
and personalities, shop around for one that fits with your interests.
If people aren't doing something you are interested in doing, then
you can take the lead and sell others on trying the mode. Remember
that when you get beyond FM voice, activities in other modes are
a group effort. You've got to build interest and cooperation among
other local hams in order to do high speed packet networking or
ATV or any of the other more technical modes.

This is most probable a most frequently asked question. Is it possible
to connect to the internet using a Modem and a Transciever ?

If so, do you need to attend a course to qualify for using the transciever ?
How much do they cost ?

Can any info, including any FAQ's, be posted to me at the following
address:
      Richard@tulyar.demon.co.uk

Cheers,

Richard Smart

I am just adding another port to my BBS but have run out of serial
ports so I am going to use BPQ multidrop. Have blown the proms with
BPQKISS containing the addresses and have made up the serial link
with the diodes. What problems should I look out for.

What is the best baud rate to use for the TNC (BSX with KISS)as I will
only have two or at most three on the one port. The PC is a 386SX40 with
standard coms card.

What is the setup for FBB and BPQ for the ports.

In BPQ I know that I have to set the ports to Polled Kiss but do I need
a port setup for each TNC on the link. Also what do I need to set the ports
in FBB.

I think I know but would like to confirm my thoughts before I put the
multidrop on line as I don't want to try and debug the thing when on air.

Any help from anyone whome uses this method would be a great help.

I'm looking at the specs for the packet radio connector to the TNC as
printed by both Yaesu and Kantronics. They are different.

The Yaesu specifies a 10 uF capacitor and a 2 Kohm resistor.
The KPC-3 manual specifies a 0.1 uF cap and a 2.2 Kohm resistor.
Which one should I use?

I assume capacitor must be ceramic and resistor doesn't matter
as to tolerance (I have 5% or 1%).

HI and thanks for reading this message.

I am looking for a piece of software to provide linked chat facilities to run on

an IBM compatible PC so that several of us can set up a linked chat network.

If you have, or have knowledge of such a piece of software please can you send me some Internet Email.

Thnaks a lot in advance de Simon.

Hi all, If you're looking for a Packet/PMS program for Windows,feel free to try out my LIU95. Its currently being beta-tested by a handfull of stations in the UK. The latest version is Beta-2 and is available on Internet from FTP://ftp.demon.co.uk in the /pub/ham directory,filename is LIU95BT2.ZIP

It needs to be run with BPQ node software,and BPQcode must be loaded before Windows. It should run on any system,that will work with BPQ, which is nearly everything.

System requirements:

* IBM PC or 100% compatable - 386 upward
* Windows 3.1 or above (maybe Windows95)
* BPQ v4.07b or above (BPQv4.08a is included)
* 7PLUS.EXE (included)
* TNC capable of running with BPQ network software (most are)
* (optional) Real Soundblaster card capable of speech
* 640x480 display driver in Windows (256 colour recommend,but not essential)

Features Include:

* 2 terminal windows for manual connections by sysop
* PMS for users to leave mail,download files etc.
* automatic forwarding/fetching of personal mail
* automatic forwarding/fetching of Bullitins
* Soundblaster Speech - annonces users connecting and other events
* 7PLUS server and capture
* Activity graphs availble to sysop and users
* Monitor alert - sounds alarm when monitored text contains user-defined
  string

The forwarding & fetching can be automatic or manual, and no
Intervention is required by a BBS sysop to setup forwarding for you.

17 th Anniversary of Amateur Packet Radio
May 31,1995

By: Burt Lang VE2BMQ

At around 9pm on May 31, 1978 the first transmissions of packet over Amateur Radio were sent. The place was the upstairs banquet hall of Bill Wong's Restaurent on Decarie Blvd. in Montreal, Quebec, Canada. The event was a special meeting of the

Montreal Amateur Radio Club (MARC) called to discuss and debate proposed changes to the Canadian amateur frequency allocations that were being contemplated by the Dept. of Communications. In attendance were several DOC officials from Ottawa, including the Director General - Regulations, Dr. John deMercado. Dr. deMercado is considered by some to be the "father" of amateur packet radio due to his persistant pressure to open up an exclusive portion of amateur band to experiment with the new mode and due to his early experience on the Aloha project in Hawaii. Others take a less charitable view of his role in the matter.

The first packet message was reported to have been "From John deMercado to the Montreal group - Bravo, well done!" or something like that. As is common with many historical events, the participants did not bother to record the particulars and memory now is less than perfect.

The Montreal Packet Net group consisted of:

Bob Rouleau VE2PY
Norm Pearl, VE2BQS
Fred Basserman, VE2BQF
Bram Frank, VE2BFH
Jacques Orsali, VE2EPH
Ted Baleshta VE3CAF
Ian Hodgson, VE2BEN
and others not mentioned.

A detailed description of the Montreal Protocol and hardware used in the experiments is given in the TAB book #1345 "PACKET RADIO" by Bob Rouleau and Ian Hodgson published in 1981. An interesting note is that the Montreal Modem design used the Exar XR-2206/2211 chip set. I am told that a sample of the Montreal Modem was sent to the Vancouver group (VADCG) in the fall of 1978 and it is probably no coincidence that the same chip set appeared in the TAPR TNC modem of which Doug Lockhart of VADCG had a hand in designing.

It is ironic that none of the original Montreal Packet Net group are presently in Amateur Packet Radio. After an initial spurt of activity in amateur packet, Bob Rouleau and several others in the group turned to commercial applications for packet. The resulting company, DataRadio Inc, today is building and marketing commercial packet radio systems around the world. A recent application is the Canadian Weather Radio packet service introduced several years ago using DataRadio 9600 bps equipment.

We should congratulate these early pioneers in amateur packet radio for the work they did in getting the hobby started. It is through their early efforts that today's worldwide packet system has grown, often chaotic, seldom planned but with a continuous forward progress due to the efforts of countless others in the intervening years to advance and refine the technology. In the

words of the first packet message:
BRAVO, WELL DONE!!!!!!!!

****

summary: Wanted. A design for a 5KHz LC ocsillation circuit.

Hi,

I'm after a design for a 5KHz antenna circuit, consisting of an
inductor and capacitor set up as a tank oscillation circuit. I need
it to detect a 5KHz signal. I then want to feed this into an op-amp.

I figure the inductor would be wound on an air core former of about
5mm diameter.

I'm not too good on antenna design so the above may not be the
best approach. I need to make the antenna as small as possible.

It is best if you email me directly as I don't have access to all of the
groups I've posted to. I'll post a summary of the responses.

Thanks in advance,

Peter.

Ever dreamed of having a career in Radio or Sound Recording?

Career Connections provides on the job training in Major Radio Stations
and Recording Studios located right in your city or town worldwide.

ONLY CAREER CONNECTIONS MAKES THIS POSSIBLE

This IS NOT a school or a study course. It is REAL hands on training,
by a working Professional in the field, at a real Radio Station or
Recording Studio. And the training takes place in the Radio Station or
Recording Studio of your choice.

Career Connections' unique mentor taught alternative to conventional
education has placed thousands of people into their dream jobs all across
the United States and Overseas. AND WE CAN DO IT FOR YOU TOO.

Special Internet Offer Gives You A 40% Tuition Discount.

Call 1-310-535-6805 For a 5 minute tutorial that explains the entire
program, and leave a message to receive our FREE package including over a
hundred testimonials from People who are now working in their dream
jobs. DON'T FORGET to mention the Internet to qualify for your 40% discount

This all the more reason, if the VPD are listening, to get a
voice-encryption system with error correction installed. it's harder to jam
police computers and going digital for voice communications can punch
through interference. unfortunately the bead counters think that it's
cheaper to catch the nuisance.

By: Roberta Staley, Staff Reporter

A ham radio operator is endangering lives by jamming police radio channels with recordings of a couple having sex.

"It's extremely dangerous," Vancouver police Insp. Al Forbes said last night.

"It not only puts the people we're trying to protect in jeopardy by jamming the channel, it also puts our own members at risk," Forbes said.

The pornographic sounds and two blasts of country music were first heard Thursday night about midnight. The second incident happened several times last night starting about 7 p.m., said Forbes.

"I think it's a video and they're playing the sound-track over the channel."

Police switch the channel off and begin communicating on another one. The cheeky radio operator also switches over, jamming the new channel.

"They obviously know all the frequencies," Forbes said.

In emergencies, police can be heard over the interference, although it remains distracting, he added.

The inspector said it's unlikely the radio pervert will be caught.

End of story.

I would think the person doing this is NOT a licensed ham radio
operator. Either way, they don't know, so calling them a ham operator
is really poor reporting and probably hurts the publics perception of
amateur radio. The VPD should go to the same system that CLEU is
using.

Any bets it's a CB type? Maybe a class action suit for defaming the good name of
ham operators would get the papers' attention.... ;-)

Given that scanners are dirt cheap -- and that there are several publications
which list
the radio frequencies in use in BC, and who uses them -- it is simple to locate
the police
channels. Didn't the VPD learn anything after that unfortunate raid several years

ago?

Has anyone there thought to contact the Department of Communications and do a
little
triangulation work? The transmissions, from the sounds of it (sorry about the
pun....),
are long enough to get some rough data....

Just how do these people know it is a ham doing these things anyway.
Are we the only people that have access to radio equipment?

and why would it be so difficult to hunt down such a persistent little
pest? I would bet a modest amount that the local area hams would love the
opportunity to restore their good name in the media, by nabbing the
son-of-a-gun themselves!

I would say that reproducing the story in its entirety, without being in the context of what is legally defined as "fair use", is a violation of copyright law. I doubt the Province publishes its "journalistic" slop free of copyright. What would prevent anyone from reproducing the entire contents of the paper for profit (besides an unexpected upward shift in the IQ level of its readership)?

So couples having sex are "pornographers"? Only the Province would let that one go. Either it's the sounds of a couple having sex (not pornographic) or it's a porn film soundtrack. As for the country music, now THAT'S disgusting!

Assuming that the article is quoted correctly, the first conclusion should be that a police/government person is responsible for the broadcast since it is on police/government bands not ham bands. After that it would be any ones guess. A person who has participated in ham or CB operation would be a good guess but only a guess. If ham is defined as an "amateur radio operator" then technically the perpetrator can't really be a ham so much as a "pirate" station since a ham by definition doesn't broadcast any thing but distress signals outside of ham bands.

Unfortunately hams are not the only groups that suffers from this form of slander. Any group which participates in activities of which the editors do not approve or understand is subject to association with the nefarious activities of individuals. If any thing good can come from this, the next time you read an article associating evil doing with some group see if you can find the "other viewpoint" that you are now experiencing before you let the media lead you to a false conclusions.

Of course it would be great to get the paper to explain it's position or requesting a retraction would be good. Assisting in the apprehension would be even better since that would get good coverage.

I'll be glad to contribute to a fund if any body in the area needs help
getting equipment to do so.

I think this situation warrants serious attention by the ham community.
The newspaper has made a claim in print that a ham radio operator was
responsible for the illegal activity, and apparently has done so without
a shred of evidence supporting the claim. The amateur radio community is
very sensitive about its public image, given the predisposition of the
public to blame us for tvi/rfi problems, and for "unsightly" antennas.
This type of news story, which suggests that hams are sabotaging
essential government services, can do untold harm to our reputation. (I
just hope the guilty culprit doesn't turn out to be one of the dingbats
that appear nightly on 75m -- but that's another thread....)

It's another prime example of media bullshit. Take note folks, this is NOT
the only story the media 'reports' and distorts, full of half-truths and
lies. This same kind of twisted 'reasoning' is the reason the media equates
hunters with poachers, gun owners with crime, etc.

I would like to know on what authority the journalist draws the
conclusion that the offender is a ham. Did he broadcast his call sign?
I doubt it, otherwise he would be easy to catch. The hams I know have
spent a lot of time and money getting their licenses and equipment. Far
too much to waste it on malicious interference. To try and pin the blame
on the ham community without sufficient proof verges on slander. I
should hope the The Province Newspaper's editorial department will
receive rebuttals from their local ham community. If my local paper
published such baseless acusations I would certainly not let it go
unchallenged.

I think the use of the term "ham radio operator" and the statement at
the end of the item stating that the police do not expect to catch the
culprit are a ruse designed to give the bozo a false sense of security
and encourage him to more or longer transmissions. In other words, the
story is in my view a police plant to flush out the idiot.

I cannot imagine that the Vancouver Police dept with all the radio
techs they have would not know how easy it is to triangulate the
source of the transmission. I also can't believe that they would not
have contacted DOC yet about it to locate the transmitter. They know
the frequencies the guy is blasting, so all they have to do is just
sit and wait for him to get on the air.

Actually, I'm quite sure that some of the local radio clubs would have
a very good time organizing a fox hunt to locate the guy, just to
clear the name of their hobby.

This sounds to me like a prank EE students might want to pull off. I
doubt that a ham would be stupid enough to think he would not be
caught and want to jeopardize his licence and equipment over something
like this.

So? I know of no law (in the US) which prevents stores like Radio Shack
from selling a ham transciever to a CB'er or even an unlicensed geek. I
know of no law, preventing Walnut Creek CDROM from selling the QRZ diskette
(which included radio mods) to an unlicensed person.

Also, I know of a lot of Hams, who use commercial equipment to get
on the air WITHIN the Ham bands OPERATING WITHIN THE CONFINES of the
license. We don't call them "commercial radio operators" though, so
why should we call someone using what MIGHT be Amateur Radio Equipment,
operating outside of the Amateur bands, and not operating under any
known license at all, a ham?

Now you might ask, "But why would someone go out and pay all that
money just to buy ham gear to distrupt police communications?"

What money? I bought a 2 meter, 50 watt Motorola trunk unit for
$15. I also bought a UHF trunk unit for $25. Of course, you have
to recrystal them... provided you didn't purchase them from the PD
scrap pile. Then there is the programable HT's. With a computer,
a cable, and some copied software, you could reprogram an existing,
found or stolen HT for the police frequencies... provided you didn't
steal it from the cops to begin with.

And then, there are all those CB types which I hear jamming on ham
repeaters, never giving callsigns, and eventually getting busted for
unlicensed operation. Those guys were not Hams, Matt, just like
a security guard who carries a cop gun and a cop club, and a cop
attitude isn't a cop.

>unchallenged.

Oh please. Read the FIRST PARAGRAPH of the article again. *A* ham
radio operator.

>:   A ham radio operator is endangering lives by jamming police
>: radio channels with recordings of a couple having sex.

No mention anywhere of more than one person being responsible, let alone
an entire "community". If he's using a ham radio (likely, since as I
said before, there isn't much else readily available that will broadcast
on those frequencies), he's a ham radio operator. Simple logic, no?

Your friend and mine,
Matt

CB units don't broadcast anywhere near police and other emergency bands.
Besides, they use AM whereas I would imagine the emergency systems would
use FM (less prone to *natural* interference).

Actully it's probably a stolen police radio.

Huh? Ok, you are in Canada, (where the bastard is) and frequencies
might be different up there for the police, but down here in the
US, commercial frequencies are closer to the cop frequencies than
the ham frequencies are.

2 meters 147.99   ham
         155.19   cop
         155.04 cop

```
          154.60  not just commercial, but dime a dozen commercial.

UHF       449.00   ham
          458.00   commercial
          460.15   cop
```

You know, I don't think I'd use your guess, or the other one. I'd guess that some punk stole a cop radio, and being the stupid punk he is, thinking how funny it would be to show his disregard for the law by disrupting their communications.

Once again, I don't know about Canada, but around here some cops keep hand held two ways in their personal cars. There is nothing different between a cop's personal car and an ordinary citizen's car. They both get broken into. Down here in Contra Costa County, about 6 years ago, the Sherrif had his unmarked car broken into. [Point to the stupidity of the crook: It was at the Sheriff's Annual Golf Tourn with many many cops in presence. Point to the skill of the crook: He didn't get caught.]

There aren't many readily-available products that will broadcast on
police frequencies other than high-end "ham" radios (the cheaper ones
won't broadcast on emergency bands unless they've been modified). So
it's a safe bet that it IS an "amateur radio" set being used.

While it's not likely that the person doing this is a licensed operator,
that does not rule out that possibility. The ham test does not include
a "personality" section to weed out the assholes.

Matt, anyone with a bit of electronics savy can modify a rig to use other
frequencies -
and surplus gear is easily converted. Or snag an ARRL handbook and build one...

As to hams being upset, YOU may read it as "A" ham operator, but the majority of
the
public does not. And if the paper did not intend to sensationalize, then why
didn't
they use something like "A prankster is interfering..."? The story is
irresponsible as it
reports unverified data and allegations as facts. THAT is extremely sloppy
journalism
-- and is inexcusable.

>said before, there isn't much else readily available that will broadcast
>on those frequencies), he's a ham radio operator. Simple logic, no?

Huh?

What if he's using a stolen cop radio? Should the paper have called
him a cop?

You guys are in the wrong newsgroup, this one is always dead.
Try rec.radio.amateur.misc.

Up here the various police depts use various frequencies. Our locals use
865MHz, the RCMP typically use the 442 / 137 pairs. The Vancouver police use
the 143 / 148 pairs.
(Repeater inputs between 148 and 149, with the outputs between 143 and 144)
Right along side of the 2M amateur band. Anyone that owns non radio shack
radios knows dam well that right out of the box the will transmit and receive
right from 140 to 150 MHz. So ANY stolen radio could be the offending
radio. I said it on TV when interviewed, and will say it again here.
it is unlikely it was a ham, as hams know the chances of getting caught are
quite high, and the penalities are even higher. We know about transmitter
fingerprinting. (The transmitter key up characteristics are logged, so if someone
was
stupid enough to do it, and then use the same radio for rag chewing on,
it would be fairly easy to match the signal, some of the amateir repeaters
have this capability, where they can lock out particular signals from keying
up the transmitter.)

You know, this thread reminded me of something funny that happened to me a few years ago.
 I hung a dipole, and had to wait a few days to get some coax to run to it. The wire was hung in
the air & not connected to a rig at all.
     Well guess what? Somebody came over and accused me of causing interference! 8-)

Newsgroups: news.groups,rec.ham-radio,rec.ham-radio.packet,rec.ham-radio.swap
Subject: VOTE RESULTS: rec.ham-radio reorganization
Message-ID: <4600@lib.tmc.edu>
Date: 28 Jan 91 12:22:34 GMT
Sender: usenet@lib.tmc.edu
Followup-To: news.groups
Organization: University of Texas Medical School at Houston
Lines: 280
Xref: gmdzi news.groups:24389 rec.ham-radio:19908 rec.ham-radio.packet:3466
rec.ham-radio.swap:941
Nntp-Posting-Host: thesis1.hsch.utexas.edu
Originator: jmaynard@thesis1.hsch.utexas.edu

The voting period for the rec.ham-radio.* reorganization is now over.
The proposals to be voted on were:
Proposal #1: Rename rec.ham-radio to rec.radio.amateur.misc
Proposal #2: Rename rec.ham-radio.packet to rec.radio.amateur.packet
Proposal #3: Rename rec.ham-radio.swap to rec.radio.swap
Proposal #4: Create rec.radio.amateur.policy

Proposal #5: Create rec.radio.cb

The results are as follows:
Proposal 1: 172 to 47...margin 125, percent in favor 78.538813
Proposal 2: 178 to 42...margin 136, percent in favor 80.909091
Proposal 3: 177 to 44...margin 133, percent in favor 80.090498
Proposal 4: 173 to 44...margin 129, percent in favor 79.723502
Proposal 5: 160 to 49...margin 111, percent in favor 76.555024

As you can see, all five proposals have passed, since all five have a margin of yes votes over no votes of greater than 100, and all five have more than 67% (2/3) of the votes cast being yes votes.

The five-day period of checking for duplicates and invalid votes begins as of the time that these results appear in news.announce.newgroups, per the Guidelines for Newsgroup Creation. If no problems that change the outcome of any proposal are found, then I will ask Eliot Lear to issue newgroup messages for rec.radio.amateur.misc, rec.radio.amateur.packet, rec.radio.swap, rec.radio.amateur.policy, and rec.radio.cb. In a month, I will ask him to repost the newgroup messages, and post rmgroups for rec.ham-radio, rec.ham-radio.packet, and rec.ham-radio.swap. I would ask sysadmins on the net to alias rec.ham-radio to rec.radio.amateur.misc, rec.ham-radio.packet to rec.radio.amateur.packet, and rec.ham-radio.swap to rec.radio.swap when they receive the newgroup messages - but not before.

Thanks go to all who provided input into the process of shaping this proposal. It started out as one man's idea, but quickly grew to encompass just about every input even remotely compatible with the overall objective. Thanks also go to all who voted - as you can see, every vote counts, as just 6 votes the other way would have defeated rec.radio.cb.

For those who keep track of when votes are received, 85 were received the first day, 128 by the fourth, 148 by the tenth, and 33 the day after the second call for votes was posted. Only 14 were received in the last week.

I wound up writing a shell script to massage ballots received into the format you see below, and an awk program to generate the report at the top of this message. Anyone who's interested in those pieces of cruft (really, they're not pretty - they just work), just drop me a note and I'll pass them along.

The votes received are listed below: (Y=yes, N=no, A=abstain)

Hi. I recently had a 'discussion' with another packeteer as to whether
it was better to use omni-directional antennas or beams for accessing
BBS's and the like. He argued that using beams results in less mutual
interference; i argued that the CSMA model ceases to work if there are
nodes that cannot hear each other yet can interfere with each others
working.
This discussion got quite 'inflamed'; What say you good people? Theres
an evening of free drinks (for me!) in the balance here.

The idea of using Source Routing and the INTERNET to "connect" all of Net 44
is a very interesting concept. But it doesn't solve the real problem. There
are still going to be parts of Net 44 that are no/can not be connected. Unless
someone can foresee a time (in the near future?) when this will not be the
case, then I still feel that moving in that direction is pointless if you are
looking at towards a time when we will take our rightful place on the INTERNET
with all the other people who are currently doing networking research. I also
believe this was the intent of the early developers of AMPR. If not, why did
they bother to get a legitimate IP Address block in the first place. I just
think we have learned enough by this point that we should admit the short-
comings of the system and work towards correcting them.

I have discovered a packet radio signal, locally, on 412.875 MHz.
While it is not in the ham band, it sounds very similar to 1200
baud packet.

The preamble or flag is higher pitched than 1200 baud ham packet.
To the ear, the preamble sounds like a 2400 Hz tone. The data
burst sounds like 1200 baud.

I have tried to decode this signal using my KPC-2 with PASSAll set
to on and using all possible combinations of the CCITT, HF, and HFTones
commands. I was not successful.

We tried looking at the signal here at work using a 'scope, but
the bursts are too short to do much with.

Any comments or suggestions would be appreciated!

>(1) How do you propose to generate that source route in the first place; it's
>possible, but not readily automated, nor robust {Hmmm. Might be able to see
>a way ->gateways that ping non-44 destinations w/ record route; too bad that's
>not a MUST implementation);
>(2) How many hosts are RFC1122 compliant? {Phil, does NOS support it? Or
>should I check the code...} Anybody know of a TELNET that lets you specify a
>source route?

Sounds good, if it works this way and if ka9q supports the generation
of source routes, then you (being 44.x.y.z) should be able to specify
that traffic should travel 44.x.y.z->gateway->destination and then the
destination should reverse the route to get back to you. Everything

works fine.

For a 44.x.x.x->gatewayA->gatewayB->44.y.y.y situation, 44.x.x.x does
need to know (somehow) that 44.y.y.y should be reached via gatewayB.

That leaves the problem of internet sites that don't know how to reach
44. sites initiating connections but I'm not as interested in that
(because of the problems with non hams broadcasting).

Source routes could be very useful for other things if it is in NOS ka9q.

I believe you want loose source routing used. You don't care how gatewayA
gets to gatewayB, just that it does.

Any comments from the networking wizards?

Sure, CSMA requires/assumes you hear the other participants. That's why
packet radio only faintly (at best) resembles CSMA: often you can't hear
other participants, and/or you hear non-participants. The use of beams
aggrevates the former problem, while helping the latter. Which one is the
bigger effect is likely to vary.

To put it bluntly, how much MORE broken could it get when you use beams?
Or when you don't, for that matter?

   If one really had a toplogy where the CSMA model actually worked (a very unusual situation in packet radio), then the use of directional antennae would reduce the overall efficiency of the topology.

  Since most packet radio topologies are poorly interconnected, I suspect the CSMA model works poorly anyway, and the use of directional antennae would not hurt very much.

   If a topology was in use where a central node was serving a number of remotely located nodes, and these nodes could not hear each other anyway, and the remote nodes have poor signals into the central node, then using beams at the remote nodes would probably make sense, though the efficiency of this topology would never be as good as a completely interconnected topology.

Goodness, Pete, a discussion that you were in became inflamed? Musta
been the other guy :-) :-)

I'd say you two get pissed trading rounds like normal over this.

My code supports source routing in that it will obey IP source route
options in incoming packets. There is, however, currently no "hook" to
allow the local user to specify the source route at the transport or
application layer.

If there is sufficient interest I could add a facility to specify IP
source routes. It would probably work similarly to the way AX.25
source routing is already implemented.

The ARRL publishes a book titled "AX25 Link Layer Protocol" that is the
official formal description of the protocol. $8 member price from the
League or your better ham bookstores.

I'd like to see it. Even in a non internet situation, it would be
very useful. If I understand it corectly, it effectively allows one
to use some intermediate site as a repeater (ie, 44.a.a.a can't reach
44.c.c.c, but 44.b.b.b can). With no operator intervention on the
part of 44.b.b.b or 44.c.c.c, a and c can communicate.

Actually, if you look at the reorganization, there's only one splitting of content relevant to Info-Hams and Packet-Radio: that of rec.ham-radio into rec.radio.amateur and rec.radio.amateur.policy. This was intended to help cut down on the flamage rampant in rec.ham-radio (and Info-Hams, to which I subscribed for a while before getting rec.ham-radio at the office). As such, I was working on the second-hand assumption that Info-Hams would be gatewayed into rec.radio.amateur.misc, and nothing else would change; this was perceived as a Good Thing from the comments I got. I _never_ got any direct comments from Brian, but my experience with subscribing to Info-Hams was considered while I was formulating the proposal. I resent being accused of ignoring the mailing list types, especially when my opposition to a .tech group was based mainly on considering just what such a group would do to Info-Hams.

My suggestion is simple: Gateway Info-Hams to rec.radio.amateur.misc, Packet-Radio to rec.radio.amateur.packet, and institute a Ham-Policy list if and when demand for it warrants.

Please do not continue the current groups as inet groups; that will only lead to mass confusion, especially since the procedures for the reorganization call for the current names to be aliased to the new names.

As you may have noted from earlier messages posted by Jay Maynard, it
seems that his scheme to reorganize the Usenet newsgroups associated
with these mailing lists has been approved by the Usenet proletariat.

Rest assured that the mailing lists will continue, but it is still an
open question as to with which, if any, of the Usenet news groups they
will be gatewayed. This question is, in part, posed by the splitting
of the single Usenet newsgroup 'rec.ham-radio' into a multiplicity of
more restricted-interest groups.

It may be that the best scheme would be to have one mailing list for
each of the new groups, although that's sort of a maintenance pain
for me to keep running.

Alternatively, we could funnel all the new Usenet groups into one
mailing list, thus restoring the status quo ante. That would not work
well when people on the mailing list post back to Usenet, as their
postings would have to be cross-posted to all the new newsgroups - not
difficult, but likely to be judged unfriendly by the Usenet people.

A third alternative, and one that represents the least work for me, is
simply to retain the existing newsgroups on Usenet as 'inet' groups,
explicitly for the purpose of gatewaying to and from the mailing
lists. Usenet people would likely use them to make sure that their
postings reach the thousands of subscribers to the lists on the various
non-Usenet networks. This would undoubtedly lead to a good deal of
cross-posting as well.

Unfortunately, the Usenetters apparently chose to disregard the entire
question of the mailing lists (from which the Usenet groups actually
originated) in their headlong rush to reorganization, so assuming that

the reorganization is actually achieved, and not simply ignored, we
are left with the question of what to do with the lists.

Suggestions?
     - Brian

While not I am not sure what exactly the theory says for each case of
a "hidden" transmitter, I can relate some of my experiences (Which tend
to support the omni approach).

First, the situation; in the greater south San Francisco bay area there is
a (several actually) DX spotting net on a two meter frequency. There are
usually 15 users connected to the announcing node. My antenna can "see"
the central node antenna (on a clear day) directly. My guess is that
I have good connectivity to about 50% of the other users. I was using an
omni antenna and running about 10 watts. Signals at both ends were full
scale on the s-meters. The central node runs 25 watts.

When the quantity of users went over ~20, I would get dropped off the
node by my controller for re-try time out (i.e., my TNC tried to reply
to a message N times and failed to do so, my TNC thinking the node went
away dropped the connection).

I tried putting up a relatively short beam aimed at the central node. My
acks from central seemed (not measured!) to come quicker when the system
was lightly loaded (i.e., less than ~15 users). However, when the user
community went to more than ~20 users, I was dropped more frequently.
Following the normal way of trouble shooting, I got a bigger hammer.

I got an amplifier and used that with the beam. I did not notice any
significant difference in my drop out rate with the amplifier.

Next I put up an omni gain antenna, outside, higher and in the clear.
I disconnected the amplifier and ran just this configuration for a
while. This configuration stayed connected longer (when a greater quantity
of users came on) that that of the beam. I now found I would get dropped
only when the user community went to more than ~22 users.

Next I rolled out the bigger hammer again. Presto, I now stay connected
substantially longer that ever before (even up to ~25 users). Reflection
shows that my station needed to heard by others to keep from being
collided with, rather than just having the loudest signal at the central
node. This is just what the theory says, nice huh?

I found the answer to keeping connected in the face of an "overloaded"
system to be going to more power with the omni gain antenna. The beam
was definitely a detraction in my situation. Now, if a station were in
a "hole" and truly isolated from the rest of the community, this
would probably not be the optimum situation.

Hope this gets you a beer.

Regards, Dave KE6ZE

Some folks who were having difficulty getting the summary of info on
putting the home PC on the internet sent me mail, so I checked and
sure enough, the file server had gone down in flames Monday morning.
So here's the scoop: requests that were received between 7am and noon
PST 28 Jan 1991 have been lost. The rest will be shipped tonight. I
would advise waiting until tomorrow before sending another request --
longer if your mail is typically delayed by a day. This file server
doesn't notice multiple requests, so you're liable to get multiple
copies.

Please send me any bizarre responses you get from the file server; I'm
putting together a bug report.

For those who missed it the first time, you can get the summary by
sending a message to <fileserv@max.berkeley.edu> with a line in the
body of the message that says "sendme ip_hookup".

The problem of hearing is true whether omni or a beam is in use.
As in **all** communications the more signal you can direct to the
recipient or the more you can hear from the sender the better it
is for you. However that advantage is gained at the expense of
the other stations on the channel.

The big problem with packet is that all the stations are on one
channel & not organised, as they should be, on a cellular principle.
The result is I can hear stations over 100 miles away but I cannot

work my local BBS!!

My local node is on the top of next hill to me instead of where it should
be, in the valley. Trunking *only* should be on hill tops & should
not have user access, perhaps then we may have a workable system.

>This discussion got quite 'inflamed'; What say you good people? Theres
>an evening of free drinks (for me!) in the balance here.

Don't know bout the drinks, but should keep the arguement going. 8-)

     I'm having a problem wich I hope someone on the net can help with. I'm
running the KA9Q Internet Protocol Package, v890421.1i.tl DS=7a57 with NET/ROM
support added by Dan Frank, W9NK and Window support by Frank Knight, KA1SYF.
I'm also trying to run the WXDATA program for the Heath ID-5001 weather
computer. They have a definite interaction that hurts only the KA9Q net
program. Without the WXDATA TSR running, the net program runs just fine. With
the WXDATA program running, the net program gets many bad checksum packets to
the point that communications is immpossible. I've tried numerous programs to
separate the two such as Double Dos, DesqView, MS Windows V3 all with no luck
or significant change in the results. The computer is a clone 386sx with 4 meg
of memory. I'm also running DOS 4.01. I wonder if anybody has any ideas?? I've
just about run out of them. (Short of using two computers, of course.)

     The two programs communicate with their respective external stuff via
serial ports. the ID-5001 is on comm1 and the TNC is on comm4 using irq 5.
There is nothing else running on the computer.

     /s/ Bob N1BRM

p.s. I've elimnated interaction with other programs by running the minimum possible configurations of each of the above as well as some more complicated combinations.

Greetings all,
   I am currently in the process of learning C and porting ka9q over to the Macintosh...(quite a first-time project, eh?) Well, I'm using LightSpeed C from Symantic and it seems that the debugger keeps flipping out when I try to compile the code into an application.
   What I really need is the source code that someone is using or has actually used to compile ka9q to the Mac. I'd like to get the Mac version up to what the IBM-ers have: NOS.
   Does anyone have this that they would like to share with me? There are a lot of changes I'd like see done to the Mac version. I'm no new puppy to Mac programming - just C.

Thanks in advance!

Shadow

+---------------

Another common trick is to use the hex representation of the IP address, minus
the "44" prefix (which is a given). Thus, my node is 460458 (= [44.]70.4.88).
Private nodes sometimes use only the last two, since they're unlikely to cross
state lines: local IP'er N8MPX's node was #0452 for a few months.

One situation in which I think it makes sense to use directional antennas
is a CSMA LAN with a full-duplex repeater. The repeater typically has a
central location and uses an omni antenna (or separate omni receive and
transmit antennas). If the users have directional antennas aimed at the
repeater site, there are several benefits: they are less likely to have
interference (from out-of-band sources causing intermod, or in-band sources
that the repeater can't hear), they radiate less energy away from the
intended coverage area, and the higher link margins allow the repeater ERP
and/or antenna heights to be reduced. In essence, the gain antennas help
to define a "tighter" coverage area for the LAN, so the frequencies can
be re-used with less geographical spacing. Of course, users near the
repeater can use omni antennas if they wish - it's more important for the
users on the fringes to use gain antennas, so as not to extend the
coverage (in terms of susceptibility and interference-causing potential)
of the LAN beyond that defined by the repeater itself.

Offhand, I suspect that your WXDATA TSR is taking over the machine
with interrupts disabled for long periods of time, starving the
interrupt handlers in NET that handle the serial port. This results in
lost characters and corrupted packets.

Your best bet is to a) upgrade to a recent version of NOS and b)
replace your 8250 or 16450 serial chips with NS16550A chips. These
chips provide 16-byte FIFO buffering on both transmit and receive
which substantially reduces interrupt latency requirements; hopefully
this will give you the margin you need to run WXDATA and NOS at the
same time.

NOS is required here because the 16550A chips require a little extra
software to enable FIFO mode that is not in the old NET versions.
However,
the 16550As will work fine with your other communication programs, even
those that don't know about them, because they come up in 8250
compatibility
mode by default.

The DRSI driver will only support one card; its not too difficult to change
but (as the author of the driver) I don't intend to make the change. You
would be well advised to have separate interrupts for each board.

You should be able to configure the scc driver to handle two boards but
you will need two interrupts. Unfortunately I dont have any example of
how this would be configured.

The interrupt is switch selectable on the board.

Good luck !

>   Or when you don't, for that matter?

CSMA is not an efficient architecture to implement over a divergent
(radio) environment. It indeed is "broken" when applied to radio.
Multiple Access does not coexist with efficient information (energy)
transfer in a radio environment. This is one of the points I attempted
to make in my paper in the 9th ARRL Computer Networking Conference
proceedings.
  However, if we are to exchange a large amount of information among a
large number of users over a wide area we *must* use directed beams.
Fortunately for amateur radio the fact that CSMA doesn't suit a network

of directed beams doesn't preclude other solutions.
For a comparison of a network of omni with one of directed beams and
some practical implications in an amateur radio environment please see
the paper.

How is this for getting my feet wet?

I've just got my license (sent in the paperwork near Xmas, got the license today -- KC6RCK). What I'm looking to do is latch a packet radio onto a UNIX machine. The goal is to get all the advantages of packet TCP/IP without actually having to resort to an IBM. (-:

I do have the UNIX machine. I've yet to get the transceiver, but I'm thinking about a Kantronics KAM (lots of goodies to use, some overkill, but a few that I'd like to take advantage of eventually, with a bay for an extra modem). Then it's off to scrounge for the rest.

If anybody's already done this, I'd be interested in hearing from them, as well as any commonts from other people.

> working.
>   Pete Lucas PJML@UK.AC.NWL.IA G6WBJ@GB7SDN.GBR.EU

Pete,
  Using omni directional antennas would only be better if it was your
intention to have all of the stations on the frequency able to hear
each other. That means that there could only be one LAN on the frequency
in your whole region. This might be greedy, depending on where you were.
  Using beams puts you in a classic hidden transmitter syndrome situation.
One of the solutions to that situation occurs when there is only one
station that does 95% of the transmitting. In that case all you must make
sure of is that the one station is heard by everybody else. Thus the beams.
In that senario the one station is -more or less- controlling the
frequency. It actually works. What you have to do is keep the other
stations from transmitting alot of data.
  One application of this is where a BBS has it's user access port on a
2m channel. The users access the BBS on that channel and perhaps route
through the BBS using the G8BPQ driver to the network. THe BBS MUST do
its forwarding and network linking on another, non-interfering frequency.

As quoted from <1991Jan28.223338.2863477@locus.com> by dana@locus.com (Dana H.
Myers):
+---------------
| If a topology was in use where a central node was serving a number
| of remotely located nodes, and these nodes could not hear each other

| anyway, and the remote nodes have poor signals into the central node, then
| using beams at the remote nodes would probably make sense, though the
| efficiency of this topology would never be as good as a completely
| interconnected topology.
+---------------

This is *exactly* the situation on 144.99 in NE Ohio; we have one central site in Chardon, a few of us in Mentor and Painesville, and two outlying nodes (one in the southern part of Geauga County and one near Youngstown). The Chardon node used a beam for a few months, then was switched to an omni.

In our particular case, the omni improved things for the Mentor and Painesville nodes but didn't lose the "DX" nodes: we (M/P) were working the back of the beam, which was aimed at the distant nodes, and packets from the northern end got lost quite often. The DX nodes are still in the network because they both have beams pointed at Chardon.

In this particular case, complete interconnection is rather difficult --- as an example, I live in an apartment, which limits the height of antennas I can put up (it's a real coup that I was permitted my Ringo at 25ft.!), but the two remote nodes would require me to put up an antenna high enough to go over a freeway overpass and a Finast superstore, respectively. :-(The other M/P nodes have similar problems, and the DX nodes would have to drill signals through hills to get to anything other than the Chardon node. In this particular case, therefore, beams are a win for the distant nodes but a loss for the local ones.

Most likely this is a wind shear system at your local airport.
Signal strength should confirm that.
It's probably not anything similar to ax.25 but I have not examined
one, however I've never found x.25 signals in this band.

Although I know of know gateway/routers for connecting from amateur
TCP/IP or AX.25, I don't think that it would be very difficult to
create on; especially given that many internet connected machines
run Phil's TCP/IP code in preference to their original vendor
supplied code.

If you set up a gateway/router you would have to take a great
deal of care about what addresses could access which services.
Obviously, you could not allow a non 44. address to initiate
a connection to a 44 address. This is doable. Within HP we
restrict or gateways so that non-HP addresses cannot access our
subnet. As the trustee of such a gateway I would be very nervious
about someone making such a connection. I'd also be nervious
about the type of traffic going across my gateway/router, but
all amateur node operators suffer from that. The SMTP handler
code would have to be configured to allow periodic trys to forward
over several days before bouncing mail to account for most
stations not being on the air at all times. The only real problem
is registering the 44 address for routing purposes within internet.
Couldn't we set up an open internet name/domain server for 44
addresses across the country?

I've been thinking about a more limited system for AX.25 traffic.
Hosts could be set up for AX.25 which would act as a worm holes.
The interface would be like any of the popular packet BBS systems,

except that some of the nodes accessable would actually be similar systems in distantly located cities. The AX.25 packets would be completely encapsulated in standard TCP/IP. No access would be given to internet at large thus protecting the trustees of the nodes from problems about non-amateur access. One of the biggest frustrations I have with packet is not being able to connect 'live' to friends in distant cities (no I don't have HF packet, and that's not very reliable). Think how this could substatually improve the throughput of mail and emergency messages (assuming that normal packet nodes are up and connect to an internet worm hole host that is up).

I recently posted a reply to a few of the articles that delt with the multi-tone telegraphy system Piccolo. Unfortunately I think I forgot to specify the distribution and it was only posted locally so I will redistribute the earlier posting. Here comes ...

There has recently been some interest in the British PICCOLO system and its French derivative COQUELET.

PICCOLO was developed back in 1957 by a team lead by J.D. Ralphs at the Diplomatic Wireless Service, which today is called the Communication Engineering Department of the British Foreign and Commonwealth Office. The PICCOLO equipment has gone through several complete redesigns. The first equipment occupied a major part of a standard 19 inch rack, while today's unit, PICCOLO Mk 6, which is made by RACAL and is commercially available as LA 1117 is a rather small unit by comparison.

PICCOLO is still in use by the British Foreign Office as its main HF communication mode and several frequencies are daily active for this purpose on HF bands.

PICCOLO and its development has been described in detail in several publications, the first article appeared in 1963.

1) H.K. Robin, D. Bayley, T.L. Murray and J.D. Ralphs, "Multitone signalling system employing quenched resonators for use on noisy radio-teleprinter circuits", Proceedings of I.E.E., Vol. 110, No. 9, September 1963, pp. 1554-1568.

2) D. Bayley and J.D. Ralphs, "Piccolo 32-tone telegraph system in diplomatic communication", Proceedings of I.E.E., Vol. 119, No. 9, September 1972, pp. 1229-1236.

3) J.D. Ralphs, "The application of m.f.s.k. techniques to h.f. telegraphy", The Radio and Electronic Engineer, Vol. 47, No. 10, October 1977, pp. 435-444.

4) J.D. Ralphs, "An improved 'Piccolo' m.f.s.k. modem for h.f. telegraphy", The Radio and Electronic Engineer, Vol. 52, No. 7, July 1982, pp. 321-330.

5) J.D. Ralphs, "Principles and practice of multi-frequency telegraphy", (book), Peter Pelegrinus on behalf of The Institute of Electrical Engineers, Peter Pelegrinus Ltd., London 1985, ISBN 0-86341-022-7.

There have as well been a few non-technical articles on PICCOLO and COQUELET in Monitoring Times.

6) Jack Albert, "Just When You Thought It Was Safe to Turn on the Radio", Monitoring Times, February 1989, page 47.

7) Jack Albert,
    "U.S. Hobbyist First to Copy Piccolo",
    Monitoring Times, July 1989, page 47.

8) Jack Albert,
    "Piccolog", Monitoring Times, August 1989, page 47.

9) Jack Albert,
    "A New Piccolo System", (The French Coquelet System)
    Monitoring Times, March 1990, page 47.

The only decoder available on the market that can decode
both PICCOLO and COQUELET is CODE3 from HOKA Electronics,
The Netherlands, equipped with the PICCOLO and COQUELET
options.

This is probably US Army or USAF packet. 412 Mhz is a federal government
frequency. My Hollins book lists the assignment as US Army, and USAF.

The correct answer is that it depends on the RF topology of your particular
network. If we assume that the bbs or node is forced to use omni antennas,
a necessity in most cases, then the use of a beam by a user station may
reduce total thruput on the channel. The reason being that your signals
arriving at the bbs will be interfered with by other packeteers' signals
because the beam prevents either you or the other packeteer from hearing
each other and performing the normal channel hold off function. If,
however, all user stations are using beams, and the beams are good enough
that the capture effect is significantly enhanced at the bbs so that the
desired station's signal overrides all other users on the channel while
at the same time being so weak at the other users' sites as to not bother
their transmissions, then the beams create a form of spatial reuse similar
to cellular and thruput is enhanced. However, with the generally random
physical distribution of stations in the network that wish to communicate

with each other at any given time, the probability of this case occurring is relatively small. Therefore, use of beams generally worsens channel collisions even though there are special cases where the beams can help.

I was the person who compiled the list. It was originally published in two regional newsletters, "The Wireless Bitstream" (newsletter of the Boston Computer Society A/R SIG) and "The New England TCPer" (newsletter of the New England TCP Association. I didn't hear about it appearing in QEX/Gateway until people received their copies and started mentioning it.

I'm currently unclear as to why it was published in a national newsletter. A copy is "in the mail" to me and I want to see it before pursuing it further with Stan Horzepa (Gateway's editor).

Yes, indeed--connectivity would be a "problem" unless you're linked into the New England subnet. I do feel that similar listings would be useful for each regional net, particularly for the sake of newcomers in each area. To that extent, perhaps it was published as an example--I don't know, I'll have to see what wrap-around Stan wrote for it.

OK. Enough is enough. It is time to bring this one out in the open
and resolve it once and for all.

I have heard numerous times that because the remote station would be
controlling the transmitter and he is (possibly) a non-ham that this
would be illegal. Now lets look at this from a practical technical
aspect.

If I put up a 10M <-> 2M cross-band repeater, a TECH can come on 2M
and initiate a contact on 10M. This is not considered illegal although
the TECH is initiating the contact. I have heard that this is OK under
the rules covering 3rd Party traffic cause the TECH isn't the control
operator of the 10M station. Well, I'm sorry, but that doesn't wash
either. Cause then all the 10M contacts with G-land AND DL-land etc.
are illegal cause we don;t have 3rd party agreements with them. The
fact of the matter is that the TECH on 2M never has control of the
signal generated on 10M and that is why the FCC allows it. I think
the time has come to look at possible INTERNET<->AMPR gateways the same
way. If it takes letters to the FCC to convince them then so be it.
If I put up such a gateway, I am controling the emissions of the transmitter
not the guy in Odessa, TX who sent a message to one of the hams on the
local LAN.

As long as all other rules are abided by, I can't see where there is any
kind of legal problem. I don't see a lot of difference between this and
NTS traffic which is non-ham (Happy Birthday, Merry Christmas etc.) put is
placed into the amateur system at one point by a ham. Basicly the same
should apply to gateways. I would be considered the ham putting the traffic

into the amateur system.
The potential gain would be great. Hams would be able to exchange ideas
and colaborate with hams and non-hams alike in their technological projects.

And just to add a little fuel to the fire, all this talk of setting up
wormholes accross the INTERNET is very interesting. And according to
The Acceptable Use Policy for PrepNET (other NSFNET members will probably
find the same is true for them) these wormholes would (IMHO) be in
violation.

So, would someone out there care to show me the error of my ways?? :-)
I'm not interested in "Well, it you just can't do it, so there."
I want concrete evidence that shows that the arguments that apply to one
type of technology (cross-band repeaters) can't be applied to a new
technology.

Hello all,

Sorry for this unusual message, but someone has tried to send me a mail,
which had a wrong header. Usually mail from 'strangers' is mail from
readers of this bulletin, that's why I'm posting this here.

The mail came from: <cis.ohio-state.cis.ohio-state.edu>@cis.ohio-state.edu>
which clearly has a syntax-error in it.

To the writer of this mail: try sending it to: adam@tnoal1.tno.nl
                                          or: gaalen@tno.nl

You may have added something like @cunyvm.xxx.xx and I've seen one more
case in which it failed. I'll confirm receipt as soon as it gets to me!

The reason I published the article in an international publication was to
inform others as to what is going on at the regional level in order to
inspire them to do something similar or completely different in their
locale.

The reason this doesn't fall under the normal third-party rules is that
the FCC has made explicit exceptions in the case of repeaters. While
third-party traffic normally requires a control operator to be
present at the control point (see 97.109), automatic control of a
repeater is explicitly allowed [see 97.205(d)]. In the case of the
cross-band repeater with an output on 10m, the Technician cannot be
the control operator. Fortunately, since a repeater is allowed to
be under automatic control, no control operator is needed. But if
the originating signal is not coming from an amateur station, as would
be the case with Internet-originated data, the station is not, by
definition, a repeater [see 97.3(a)(34)]. So the analogy between cross-
band repeaters and an Internet gateway is false.

But you are *not* controlling the content of the messages being transmitted
by your station. No ham is controlling that, and therein lies the problem.

I completely agree with your last statement. But there *is* a legal
difference between the gateway and the NTS example. See below.

> technology.

At the risk of (once again) being accused of being a technology-bashing,

Luddite, ARRL old fart, let me try to (once again) explain how it is that the existing rules unfortunately prohibit unattended Internet->AMPR gateways.

97.109(e) allows packet stations operating above 50 MHz to pass third-party traffic under automatic control, but "The retransmitted messages must originate at a station that is being locally or remotely controlled." Even worse, messages originated by non-hams (where the notion of a control operator can't possibly be stretched to cover the originator) surely come under the requirements of 97.115(b) which states in part:

(b) The third party may participate in stating the message where:
   (1) The control operator is present at the control point and is continuously *monitoring* and supervising the third party's participation. [Emphasis mine.]

This means that, under the current rules, you have to monitor (read) the data being sent by the Internet participant. A bit difficult in an IP gateway!

Once again... cross-band repeaters are repeaters and fall under the repeater rules. An Internet gateway is *not* a repeater and does *not* fall under these rules. The reason the repeater rules were created in the first place was to provide relief from the third-party rules when only relay of *amateur* signals was involved. Trying to interpret these rules in some way that would allow automatic relay of nonamateur signals violates both the spirit and letter of the repeater rules. Sorry.

Hi,
I got a copy of the System V version of Net from TOMCAT for the house

Xenix system here and am having a REAL problem compiling it. The code seems
to compile OK but before I actually get to compiling it the MAKE program
falls over screaming "out of memory". :-(

Now I'm reasonably new to Xenix/Unix and C but as far as I can see the
only solutions would be either to compile it manually (urk) or split the
makefile.

Has anyone else had this sort of problem?

The machine I'm trying to compile it on is a 12Mhz 80286 running SCO Xenix
2.2.3 in 2.5Mb of RAM and 105Mb of Hard disk.

(Hopefully in a couple of weeks we can borrow 8Mb of RAM for a couple of days
but I'm not sure that will help. :-( )

Carl.

Greetings; i have recently been having a battle of wits :-) with a lot of
users in the UK who seem intent on addressing their messages to 'ALL@GBR'
or some similarly uninformative destination. I have done a count of the
messages on several BBS; something around 30-40% of messages are sent to
'ALL' !!!
I rarely bother to read those messages addressed to 'ALL' from users
who further alienate their intended audience by putting something totally
uninformative (like 'HELP') as the only thing in the 'Subject:' field.

I have been trying to draw up a list of preferred 'To:' fields so that
people can make best use of the limited addressability they have in headers,
and so obtain the best targetting of their messages to the intended
audience. Nothing i am doing is aimed at producing a 'restricted'
list, purely a list showing common usages for the benefits of others.
Also note that my list will include popular European variants of 'All'
depending on national language variations.
I was wondering - what is the normal procedure in the States and the rest
of the world for these sorts of thing.... Do you have the usual 'to' fields
anarchy, or are there 'preferred' ones as well as ALL ????
And what do you do to those users who send 'local' news (regarding club
meets etc) to ALL@WWW. (you know, it arrives in Tasmania six weeks after the
event took place)   There must be a special place in Hell for these people.

     Pete Lucas PJML@UK.AC.NWL.IA   or G6WBJ@GB7SDN.GBR.EU

(Please reply via the List, or via Internet/Bitnet; my mailer has just been
   attacked by the Data Loss Monster who eats anything with a '!' in the path)

Jon,
  You gave a relatively reasoned response and I'd like to respond. But
before I do, let me say why I believe Internet gateways (i.e., routers)
can be legal, even assuming you're 100% correct.

First, there are three major services (among many) that are part of the
TCP/IP suite that we'd like to use:
--TELNET {connection to a host}
--FTP {file transfer}
--SMTP {email}
For all except SMTP, it is easy to configure a router so that no one on the
Internet side can initiate a connection. I then claim that since an
amateur would be initiating the host session and/or file transfer, that
passing traffic back and forth thru the router is within the rules.
For SMTP, one needs a cooperating host on the Internet (a POPmail server)
and the ham can initiate reception of his own email.
If the routing is done by a host, then only one machine is necessary --
though most hosts don't, by default, support the kind of filtering
necessary to prevent Internet initiated connections.

Is that satisfactory?
   Willis Marti

I'll go back and read, but are you saying the rules explicitly say that an
amateur operator can work frequencies on which he doesn't have
privileges, as long as he goes through a repeater belonging to someone else?
Or is that your interpretation?

I'd recommend a couple of books that might help you understand the

differences in technology, and what can be done to alleviate concerns
instead of just saying "It can't be done.":

Internetworking with TCP/IP (1st or 2d edition) by Douglas Comer
Computer Networks (2d edition) by Andrew S. Tanenbaum

|> 97.109(e) allows packet stations operating above 50 MHz to pass third-

I think you're stretching it here, unless you consider retrieval of stored,
machine readable data to be the same as a live person talking into the mike.

A tandy 100 was used in the first mobile and portable packet experiments
here in Canberra. :-) Friend of mine had it setup in the car. Somebody
connected to say hello and was rather confused when Doug typed back "not
now I'm driving". :-)

We use that same m100 quite a bit when we go to a remote digipeater site as
the terminal end of a TNC-2/HH portable station configuration.

There is also a BBS available for the m100 written in basic that seems to
work ok over packet however with the growing number of PMSs it's not really
worthwhile. Most TNC's now have more processing power than a m100.

Carl.

Satellite Keplerian Elements Available for Anonymous FTP

For those that are having difficulty receiving the NASA
satellite tracking element sets via News postings, I have
set up and maintain an archive of these element sets accessable
by anonymous FTP.

The server is:

nachos.ssesco.com [192.55.187.18]

T.S. Kelso's element sets (the most current and several previous versions)
are maintained in the directory:

sat_elements/nasa

New element sets are posted weekly.

You can also find the Molczan element sets on the same server
in the directory:

sat_elements/molczan

These are also updated weekly.

When logging-in to nachos, please use your e-mail address as the
anonymous password so that we can trace network problems if they
should occur.

Thanks go to T.S. Kelso and Mike McCants for providing these element
sets on a regular basis.

Address problems with the server to: elmquist@ssesco.com

The point made here appears to be a "gray" area. I would clearly see the copyright restriction you append to software as taking the work out of the commercial realm - but who knows what the FCC would do, or a Federal court?

AND, I agree that there is confusion about putting works into the public domain...and that your restrictive copyright notice makes an important statement at the very least.

There is a general lack of understanding between the difference between shareware (and derivitives like crippleware) and public domain as well as freely distributable "copyleft" software.

I don't see "shareware", which solicits funds and depends on its distribution through networks for generating revenue to be anything other than commercial. If it is transfered over amateur radio you are using amateur radio to further their business and commercial interests.

The fact that it is done and as far as I know tolerated doesn't make it legal.

jv

To: "packet-radio@ucsd.edu"@M_INTERNET@MRGATE@SNDRTR

I have uploaded for ftp the lastest version of the multi-users,
multi-languages BBS of F6FBB on both tomcat and nic.funet.fi

the files are :

fbb512d1.zip zip of disk1
fbb512d2.zip zip of disk2
fbb512d3.zip zip of disk3

the files are in bbs/f6fbb on tomcat and in pub/ham/incoming on nic.funet.fi

You have to pkunzip each file on a floppy. then you add pkunzip.exe on
disk1.

An automatic installation is provided for disk C: (only disk c:).
The disk3 contains a simplified BBS without dos servers. This disk
is not needed except if you want the simplified BBS.

This version includes a compressed forwarding which provides a gain of
about 40% on the channel.

The distribution is coming directly from the author.

The author can be contacted on packet at f6fbb@f6fbb.

I can also forward him Emails.

or directly answer to your questions.

73s from fe6cnb Remi

PS: Due to hardware problem on our Internet gateway, if you can not contact
me at this address you can use 71750.420@compuserve.com

I posted this question to a bunch of packet radio BBS systems but no
answers....

Q. Are there any Packet<->Internet gateways around such that I can
    route mail between a packet station and TCP/IP-Internet-SMTP ?

    Basically, I want to exchange mail between addresses like
     gary@midway.uchicago.edu

    and a packet station like

ke9zm@wb9mjn.il.usa.na

A. ?

Thanks,
  Gary

I think 300 bps FSK packet probably is a pretty severe misapplication
but that isn't all that is going on. The several millisecond variability
in multipath signal arrival times makes signalling much faster than
"old fashioned" baudot pretty unattractive... particularly below 14 MHz.

  Take a look at the 9th ARRL Computer Networking Conference proceedings.
Ray Petit, w7ghm has a pair of articles related to his "cloverleaf"
HF data communications system. This is, in Ray's words " a modulation and
coding scheme which offers very worthwhile improvements over HF packet,
AMTOR and even CW". It is an adaptive scheme which is quite spectrally
efficient. Channel width is 100 Hz with no guard band and data rate can be
more than 100 bps under the best conditions.

Also take a look at Tom Clark's, w3iwi, papers "Comments on HF Digital Communications", Parts 1 and 2. Tom comments as a member of "SKIPNET" and addresses some of the fundamental issues.

After having a chance to compare packet on HF to Amtor on HF, I can't understand why people fool with packet on HF. It seems like a misapplication of technology. I suspect the reason it is not effective is that the channel on HF is so different than VHF (more noise and qrm for one thing and signal dispersion due to propagation effects for another). It seems like the reliability of Amtor more than makes up for the 100 baud rate vs 300 baud of packet. Perhaps a rethinking of HF packet and a system of interconnects based upon Amtor is what is needed. I've fooled a bit with Aplink and that seems like a move in the right direction, but not a perfect solution either.

Is anyone aware of a serious technical comparison of the the two? I haven't found any commerical packet operations on HF, which leads me to think that hams haven't thought out this one.

Does anyone know if there are any nodes in Venzuela, and if so, could you send me a list of the nodes? We have a student here who would like to talk to her friends there, and there don't seem to be any sites Bitnet can access.

Thanks!

Look in the oft-quoted "basis and purpose of amateur radio." People
fool with it because that's part of what amateur radio is about --
experimentation. (Since we're non-commercial, experiemtation doesn't
have to be confined to "what's most efficient" or previously unexplored
areas.) Likewise, the experimentation is personal -- it doesn't have to
be justified to a commitee. If you like HF packet and can find other
people who share your interest, everything is cool.

|>

|>

Again, we don't have the same constraints as commercial radio. We can
use modes in places that it doesn't make sense just because we feel like
it (let's not revive the code wars.) We have thought it out -- our goals
are just different.

In reference to an article, I believe there was one in a recent (within
two years) QEX that addressed the question to some extent.

>From : G6FCL @ GB7DUG._32121.GBR.EU
Hello,

BayCom has been with us for a couple of months now and has proved very
popular with it's new users. BayCom 1.20 is much like Digicom, it gives
you all of Packet Radio's facilities, but without the need for a TNC!

BayCom runs on most IBM (tm) and true clones, in fact there are very few
PC's that it will not run on. Hardware requirements are simple: Any PC
be it XT or AT with either a serial port set as COM1 or COM2 (most PC's
have a single COM1 port as standard) added to this is a very simple
modem that plugs into the serial port. The basic modem supports VHF/UHF
packet, but you can of course use an alternative design, if you wish to
use both VHF/UHF and HF Packet Radio, oh yes! and a transceiver of course!

The software is supplied free to anyone who supplies the following items:
3.5" 720K or 5.25" 360K formatted disk, return mailer (addressed and
stamped for return) - If you want copies of circuits and PCB details, then
please include a small payment to cover photocopying costs.

BayCom 1.20 is the work of two German radio amateurs DL8MBT and DG3RBU
both are commited to keeping amateur radio a hobby, this is the reason
Digicom and BayCom are distributed freely, it is stronly recommended that
a small donation of 20DM (about 7 pounds) be sent either direct to the
authors or via myself (if via myself, please obtain a 20DM note from any
branch of Thomas Cook's or a UK Bank) - All monies are used to promote

the design and continued programming of both BayCom and Digicom, any
excess is used to finance the German Node system.

In addition, I require a commitment from you that you will not alter the
code in any way and distribute such altered code, and should you pass on
copies to others, that you will pass on only copies of the original disk
so a new user has all the original files on his/her disk.

BayCom is Public Domain, but the authors retain copyright, therefore if
you see BayCom being sold in any shape or form, it is breach of this
copyright, BayCom is free, you don't have to make the donation, but
if you don't make a donation, you'll be one of very few!

Copies are obtained from:

Jim Mahoney G6FCL,
89 Tyefields,
Pitsea,
Basildon,
Essex,
SS13 1JA.

Please do not forget the disk mailer and postage.

If you set paclen to 1, and retries to 0, you have changed AX.25 in
a very coarse way to mimic AMTOR ...
And AMTOR deletes (i.e.converts) lower-case ...
the real problems are:
1) we need better modems - DSP stuff being worked on by N4HY and others.
2) we need a better HF protocol ...

I listen to this nonsense re how bad HF packet is - listen boys, we move
a lot of mail this way - a satellite link would be much better, but we DO

move mail.

Our real problem at the moment is channel congestion ...

And CLOVER does not really offer an advantage over vanilla AX.25 ...
if you put 24 stations on freq with CLOVER, you WILL degrade throughput.
Hank Oredson (W0RLI) told me the figures they obtained with 300 baud
AX.25 with 2 stations on a freq were at least as good if not better, and
you didn't have to lock receivers together with WWV ...

According to N4HY, he has achieved a thruput improvement with a new DSP
modem simply by having the modems shift the Receive freq to lock the two
stations on-frequency ... works even with stations that start 80 Hz apart.

Hope that reveals the PRACTICAL side of HF packet .. I know, I run it
and supervise it every day on 14.109 ...

Without getting into a discussion of how amateur radio is intended partly
for experimentation and personal interest, here's a couple objective
comparison points between AMTOR and PACKET. (I am _very_ familiar with
packet, but no expert on AMTOR. If I'm in error, I have no doubt it will
be pointer out! :-)

Both modes use similar bandwidth.
Both modes employ data integrity protocols.
Packet allows multiple conversations on a single channel without
  coordination between parties.(I don't think AMTOR does.)
Packet keys the TX only when a packet is sent. (I believe AMTOR,
  being synchronous, keys the TX even when no data is being sent.)
Packet on HF is 300 bps. Amtor is generally 100 bps.

I think there are solid arguments for packet being more efficient than
AMTOR. Packet uses a network protocol, making multiple connections and
unattended operation simple, where it would be perhaps impossible with
AMTOR. If you only ragchew on HF, it's one argument. If you run a
chat RT or BBS, it's quite another. One ham's boredom is another ham's
quivering excitement. Each to his/her own mode, I say. Many of us are
in this for the fun of it!

I am not sure I believe this as you would also have to change the signaling rate. I also think the protocol is a bit different, but I will accept what you say about protocol for now.

>And AMTOR deletes (i.e.converts) lower-case ...

this is a problem but not one that I am concerned with. I expect that any alphabet can be adapted to any protocol. Of course, you may not be able to stay with a 8 bit character on the communications channel level but that shouldn't pose a problem either.

>the real problems are:
>1) we need better modems - DSP stuff being worked on by N4HY and others.

That's nice but I understand that there are ~45000 pk232's and I don't know how many Kantronics boxs out there that work great on amtor and lousy on HF packet, at least in my experience. The DSP may help but the implementations I've seen are pricey ($1000 US. vs. $300 US.) Maybe that will come down with volume though. A better solution might be to come up with a system that would allow all those non-DSP boxes to work better and still tie into the VHF packet system.

>2) we need a better HF protocol ...

AMTOR.....just kidding!

>I listen to this nonsense re how bad HF packet is - listen boys, we move
>a lot of mail this way - a satellite link would be much better, but we DO
>move mail.

I didn't say it didn't work, I just said it worked poorly. I've tried to "read the mail" on HF packet and usually lose patience and move on to something else before I get much read. Rather, much new read, I do read a lot, over, and over, and ..... I expect a satellite would be better because the channel is more benign with respect to noise and signal dispersion, although I suppose it has its own set of problems, doppler, etc.

On the other hand, I frequently monitor Amtor communications with much success. Then the only thing that limits my listening in the message content.

BTW. most (99%) of my impression is based upon monitoring, not actual communications with other stations. I guess it's a habit I picked up DXing many moons ago. As I mentioned in my first posting, I would like to hear of actual data. If I don't, I guess I will have to make it up myself. :)

Regards,

Bob

>AMTOR, but it's only functional if the packets get through.

True. Of course, at 300 bps, transmission time is less, so some types
of fading and QRM might be less likely to affect Packet. I agree that
AMTOR might be more resilient to poor path conditions, though. You
make a good point.

With all the talk recently on this digest re: HF Packet vs. AMTOR
I would just like to add that the International Red Cross and all
of the U.N. organizations have opted to use AMTOR as their standard
HF digital communications protocol. (At least in Europe, the Middle East
and Africa). According to my source in the U.N. (Pat - K0OO) they did this
after extensive testing between RTTY - 50 baud, Packet, and AMTOR on
frequencies much LESS congested than our amateur bands.
No doubt that Packet does have some advantages over
AMTOR such as lower case, the ability to transfer binary characters,
APLINK commands are somewhat limited etc. In any case, most of the
traffic that flows over Europe still chooses HF Packet under circumstances where
they can't use VHF and higher. When the path is very good, it works very well.
Most of the major transfer points use beams and only 100 watts.
It would be great to see the Packet protocol incorporate some kind of
"Dynamic PACLEN" which would automatically vary the "PACLEN" from say 16
to 512 depending on the quality of the path (determined by amount of retries +
other statistical data based on the framing).

Lines: 56

RUDAK II, subtenant on the Russian scientific research satellite GEOS,
also termed AMSAT OSCAR 21, has been activated this weekend.

RUDAK II is part of a joint venture of AMSAT-U, ORBITA and AMSAT-DL. It is
a digital transponder and mailbox system, comprising a 65SC02 based computer
with 56 KB of RAM (identical to the failed RUDAK onboard AMSAT OSCAR 13),
a 1 MB static RAM-disk and a second general purpose computer with an RTX-2000
CPU, 128 KB of fast (10 Mio accesses per second) error corrected CMOS RAM and
AD and DA converters which will be used primarily for digital signal processing
applications.
RUDAK II is accessible through four uplinks using different types of modulation:
1200 bps FSK (like JAS and PACSAT)
2400 bps BPSK biphase-S (like the AO13 downlink but at sixfold speed)
4800 bps biphase rectangle spectrum modulation (RSM)
9600 bps RSM (not the G3RUH FSK modulation)

The downlink is capable of a variety of modulations. Presently it is 1200 bps
NRZI BPSK and 400 bps AMSAT telemetry (like AO13, for engineering purposes
only). Further modulation types (e.g. FSK and 9600 bps RSM) will be used in
future. FM speech on the downlink is also possible.

Both processors were loaded last weekend. The 6502 computer (called R2) is

running packet radio digipeater software on top of the IPS operating system. A
preliminary mailbox will be loaded soon. It also continuously checks the
degradation of a 32 kB EPROM which replaces one of the RAM-disk RAMs.
The RTX is also running IPS and some DSP routines for speech generation and
'FM repeater mode'.

The following modes were tested this weekend:
- packet digipeater with 1200 and 2400 bps uplinks
- FM repeater (uplink is the 1200 bps receiver)
- speech generation

Due to an automatic cycling through different telecommand modes, initiated
by the main payload, the RUDAK downlink was not available all the time
this weekend. The downlink is on 145.981 MHz and is very strong. The digitized
speech could be heared virtually noise free with a handheld.
The 1200 bps uplink is at 435.015, the 2400 bps uplink at 145.155 MHz.

The following two-line Keps are not the latest but still VERY accurate:

1991 006A
1 21087U   91 32.47108372 .00000525 00000-0 54376-3 0   53
2 21087 82.9490 334.1385 0034162 277.8354 81.8925 13.74338076   400

73s from the AMSAT-DL RUDAK group:

Hanspeter (DK1YQ), Peter (DB2OS), Gerhard (DG2CV), Stefan (DL2MDL),
Hermann (DK8CI), Knut (DF8CA) and many others.

and, of course,
Leo (UA3CR).

In responce to Ron France's desire to run packet from a telephone, here is

something that works for me. I run pcANYHWERE on the computer at home. I have Com1 and Com2 set for 2 different tncs. These Com's are running standard interups. I bought an internal phone modem (2400 baud, fo those inquirering minds) and set it up for Com3 interup 2. Setting the pcANYHWERE to run custom for Com3. I use the companion pcATERM to give even more security, (without ATERM, you don't get in at all! But it is configurable for stand term programs.) I then bring up my usual packet term program ans away I go. pcANYWHERE gives me FULL control of the system, including remote booting of the PC. pcANYWHERE seems to take abt 60k of high memory so it isn't excessive. I also run this setup on my packet BBS, which is remoted at the digipeater site, 8 miles from home. Makes it nice that I can dial in and have full local control over the phone line. There is also a file transfer module for uploading and downloading programs remotely.

It has helped me and I am sure it will work for you. I too run 8088 640k systems, so it seems tobe real good on not hogging the memory.

Has anyone connected this HT to the MFJ TNC. Do you know which wires connect to which wires? Of particular interest is the mic wire from the HT.

Any help would be greatly appreciated. It should would be nice to save a Long distance call to Alinco!

Thanks in advance! N1ILY - Jeffrey Perry

Summary:I am trying to get in touch with BV stations

Hi Mr. Tsai,

Happy new year. I am very glad that I can see more ham information
from Taiwan. Presently, I am a grad. student from Taiwan and
holding a US ham license. I like to get in touch from Taiwna from
the HF band. I am usually on the 10 m band and I like to hear some
current status of the ham radio in Taiwan. I am appreciated that
you can provide some information for me. TNX

Only once have I heard a weak signal from Taiwan at 21.265MHz, I
think I have heard Tim Chen, BV2A, and never again.

Now I am using a KENWOOD TS-440S/AT with a dipole antenna and hope
that I can hear your voice from 10 m band.

Hi

I saw a posting on this group about a fortnight ago saying that
the new version of the kiss code v1.1.8 I think fixed the slow
(12 bytes /sec) problem in ftp transfers using TCPIP, if this
is true is the new code ftp'able from somewhere, if not where
can I get a copy and am I correct in what I read????

Thanks

As the subject says. I can not compile this version of KA9Q, as well as
subsequent version (of 1990), since in audit.c it uses
external int Uend,_STKRED;
Borland TC2.01, TC++1.0 ate it (Although I failed to found in the manuals
this keywords), but since BC++ 2.0 during link I get unresolved names -
_Uend and _STKRED.
If somebody knows of this (presumably heap/stack management in TC), please
inform me.
       Thank you,
            Mike

Subject: Internet news/mail/etc. now affordable via Satellite & dialup
Message-ID: <BnFK8y.ItD@world.std.com>
Summary: Announcement of new Internet access service
Keywords: internet new email dialup satellite news
Organization: The World @ Software Tool & Die
Date: Tue, 28 Apr 1992 18:19:45 GMT
Lines: 163

Please read and return the following form and give copies to anyone interested
or that should be interested in Internet access, especially NetNews and Email.

        Internet News and Email Now Affordable via Satellite!

     Available by June of 1992 for as little as $10-$20 per month in the
     Dayton area. Other cities will be added as demand warrants.

A new service is now being created that will provide a full feed of the world renown Internet NetNews (aka Usenet) and other services, including professional quality Electronic Mail (Email). This is a commercial service and is based on the Commercial Internet Exchange (CIX) services and guidelines. This allows this service to be used for very inexpensive commercial data traffic for EDI, email, data transfer, etc.

Long distance phone charges have finally been overcome for bulk data transfers. This is a new service making available for the first time: hardware, software, and satellite bandwidth for transfer of public access network information. With just a 386 or any other Unix capable system, we can provide software and satellite download hardware for a continuous 9600baud asynchronous connection. A low cost turnkey system is being developed now.

Some facts about Internet and its services:

Email:
Connection for email to nearly 10 Million people world-wide in all technologically advanced countries. A few notable examples: All of North America including nearly all Universities and businesses, most commercial and public email services (Compuserve, Fido, Genie, MCI Mail, ATT Mail), all of Europe, Russia, India, Israel, Japan, parts of South America and Africa, Australia, and New Zealand. Email is fairly secure and encryption is available.

News service:
Over 1200-1800 newsgroups on many subjects, hierarchically organized. This is not a traditional news service, but like a world-wide bulletin board system. Anyone can post to any group (although some are moderated) and their message is seen by up to a million news readers. Traffic averages over 30 Megabytes and 5000 NEW messages per day. Example newsgroups:

comp.graphics
comp.sources (with subdivisions)
comp.binaries.ibm.pc
misc.jobs.offered
misc.jobs.resumes
comp.std.c
rec.humor
misc.consumer
alt.bbs.allsysop
alt.bbs.ads
rec.radio.amateur (with further subdivisions)
soc.culture.australian
soc.singles
etc.

Archives of source code, binary (executables), data:
Access is possible to thousands of sites where archives of public domain or shareware source code and executables for every major computer, including: All Unix, MS-DOS, Mac, Amiga, etc. Each of these sites is larger than most bbses, often with Gigabytes of storage.
Also available are:
   standards documents
   archives of certain
   newsgroups
   public documents like the US constitution
   public data like CIA World facts and maps, NASA pictures and archives, National Institutes of Health information, National Institute of Standards, various Security organizations.

People:
The leaders in technical fields often are available via email and sometimes personally communicate on and monitor Internet. Notable examples: Kernigan & Ritchie Bell Labs, Mitch Kapor EFF, Richard Stallman GNU.

Misc:
Time service, weather service, access to many commercial software or hardware companies for support.

There are several possible ways this service could be obtained:

Individual or small company Consumer:
Would make a local high speed serial call to a "Local Internet Gateway". This would allow reading or transferring email and news articles and posting or mailing new messages. Typical costs:
$5/mo and $2/hr or $20/20hrs. with discounts for higher volume.

Larger company or "Local Internet Gateway" provider:
Purchase software, satellite download equipment (18" dish, v.29 external modem, receiver, cable), and optionally a computer system with multiple serial ports and high speed modems.
The satellite download equipment would cost $1500 and software would be approximately $500-900 with a small yearly maintenance fee.
A commercial dial-up service would also be established with dial-up or high-speed leased line. This can run from $4/hr to $1000-2000 for T1 speeds (1.54 Megabits/sec). This connection is used for outgoing email and netnews traffic, error recovery for the satellite link, and telnet/ftp/irc(Internet Relay Chat, like CIS CB simulator)/X-windows traffic to be multiplexed. Multiple users can share the bandwidth.

Large regional network provider:
Provides the previous with high bandwidth access to CIX and provides local companies with low cost direct network access to Internet through a "firewall" system.

Internet News and Email Now Affordable via Satellite!

New customers are needed to help plan for capacity. Dayton will be the first city setup, with several others following immediately.

Customers in any area or those interested installing a private company connection or a "Local Internet Gateway" should contact us so that we may coordinate.

This is especially valuable in smaller towns where there is no local computer service access.

Please fill out the following for interest registration and any requests for more information to:

Picked up one of the closeout HK-21 radios, and got it working, but need
any manuals (US mail) or technical info. If anyone has any available,
please contact me...

I am looking for good programs for running packet on my st. Especially
anything that can handle seperate windows for different streams.

Please email me - thanks (I don't care if they are commercial)

This isnt really a followup.....

I would like to see if i have the right idea:
Is the packet radio idea that you have some kind
of modem-like connection over ham radio? Does it
then mean that there could be Internet nodes connected
only in this way? Or have I seriously misunderstood?

Tim

Sorry if this is the wrong newsgroup for this, but I didn't
see any more appropriate one.

I am using OS/2 NOS, and I am trying to attach an asynchronous
port. The port is com3, but the interrupt is 3 instead of 4.
I have set com3 to be 0x3e8,3 in my config.sys file. When I
try to attach the port, running slip or ppp, I get a com1
returned 6e message, and I can't access that line at all.

Also, I am having a problem with understanding how the send/
recieve works when you are using attach with slip. I need
the send recieve sequence to dial a modem for me, and enter
my password to start slip services going.

Thanks for your help,
---->Brad<----

Howdy Netters,

Now I have heard on and off on different parts of the net that there are those out there who are able to get a UUCP feed or SLIP type feed over the radio. Just recently I bumped into a Ham operator who says that it is done all the time.

So my question is, is it possible to get such a feed using an Amiga using AmigaNos? From what I have heard and read AmigaNos was created by a Ham operator to be used over the Air, but that it has been used over phone lines as well.

What I would be specifically interested in would be a small setup using 2Meter or 8Meter. Don't flame me I am not of the Radio world and don't know much. I am just going by what I discussed with this Ham operator recently. I would like to use AmigaNos if that is indeed its purpose or other software suited for this purpose. The Ham operator I talked with Suggested 2 or 8 Meter. I can't remember which of the two he said, but he suggested this format because it was not as expensive and because the Antenna needed would not be a huge affair.

Also, I would like to know. Is there anyone out there in the Amiga Community doing this already. If so, could you please contact me? I would be very interested in talking with you to find out more of what is involved. LICENCES, EQUIPMENT, COSTS, SOFTWARE, Etc...

Thank and take care..

Carlos

Hi,

I have some central questions about connecting
two hosts via some protocol, without using
the telephone-net :

I want to connect two or more hosts (running
Unix) with either TCP/IP or ka9q or something
by transmitting the data 'through the air'!

So I wanted to know, what hardware equipment
I will need, and I also wanted to know what
is the correct term for this (ham-radio?
packet-radio? cb?)

Anyway, I don't want to spend too much money
on the radio hardware (less than DM 300, that
are US$ 200).

I intended to use so called CB-units (don't
know the correct english term).

So, if you have some material about this
or if you can answer my questions or if
you can tell me where to find a FAQ for
tis group, please emal me or post to this
group...

Did anybody try to slow down commercial ethernet boards for the
IBMPC (e.g. 3Com, WD, Novell...) in order to send data at speeds
between (say) 500kbit/s and 2Mbit/s ? This way it should be easier than with
10Mb ethernet to send the data across a radio/IR link. The advantages
are:
- faster than RS232 ports;
- PC ethernet boards are pretty cheap nowadays;
- Ethernet boards are packet oriented rather than character
  oriented, so they won't kill your PC for processing interrupts.

If memory serves, some Ethernet controllers (82586, WD8390 ?) have
separate clocks for the controllers and TX shift register; other
controllers might be similar. The only thing I don't know is how slow
the TX clock can go. Apart from this, the patch should be trivial and
reversible.

     Any information appreciated.
     Thanks
     Luigi Rizzo

We have an interesting communications problem that someone on this
forum may be familiar with. A system we're building has a set of 8-12

sensors distributed over a moderately hilly 20 sq. mi. area. These sensors are smart--they store their data until polled, usually over dial-up phone lines.

The number of modems at the master station limits simultaneous phone access access to the sensors. Also, line costs mount over the years. Some type of packet radio solution seems intriguing. Spread spectrum solutions are easiest, as they require no licenses and can share bandwidth. I'm familiar with one commercial product, the Metricom radio modem used in the utilities industry. Are there other innovative solutions anyone has run across?

The throughput requirements are low, requiring only 1200-2400 baud. Near real-time access, with 2-5 sec. end-to-end delays, would be nice. The remote stations must be addressable from the master. There can (and clearly must) be protocol at the master end to address outgoing transmissions and identify incoming messages, but the sensor end should look like a wire--RS-232, no protocol.

I'm a sporadic reader of this forum, so I'd appreciate direct e-mail replies to "ingold@flood.com". If anyone expresses interest, I'd be happy to summarize back to the net.

As I recall, they can be found on 145.550. What I don't recall is
what callsign they use. Anybody help with that?

 I remember they are using 145.550, same freq as with their FM simplex
qso's...as a matter of fact i have heard them on this freq, but i dont
know if they do use it nowadays...

Yep. 145.55 MHz. They tend to be a bit sporadic, so it takes a little
patience. Good luck.

Is there a gateway that forwards email between the Internet and
packet radio? If so, what's the mail address syntax? Thanks.

Here's one I saw earlier:

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
    a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
    No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
    packet radio: WB7TPY@WB7TPY.AZ.USA.NA   -or-
    Internet   : david@stat.com   -or-
    Fidonet   : David Dodell @ 1:114/15

(5) Have fun. Use the gateway as much as you like. That is what it is
    there for.

From Internet to Packet

Send mail to the internet address of:

gate@wb7tpy.ampr.org

The first line of text must contain a full packet address, preceded with the word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address, proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@stat.com

73's De Jason Turning N6WBL
Internet : jturning@netcom.com
AX.25 Packet: N6WBL@KD6XZ.#NOCAL.CA.USA.NA
AmprNet : n6wbl%n6wbl@sosac (44.2.0.64)

I use the n0ary gate and BBS. Not only can you send email but you can
also participate in bulletins or any other BBS function. It is really
cool. Here is the whole file ... the author's address is at the end.

----------------(cut here)---------------

There is an error in the "73" magazine article. If you are an internet
only user the action of registering you automatically enables email
forwarding. You do not need to perform the "Enabling" step.

N0ARY/BBS Internet Gateway Operating Instructions
August 7, 1992

LOCAL USERS:

Local users are those that log into the bbs via the bbs's telephone modem
port (408-749-1950) or via one of the 3 tnc ports (144.93, 223.62, 433.37).
Each local user has a bbs account that is used to customize how the bbs
interacts with the user.

Local users can set their account up so that all incoming mail addressed
to their call will be forwarded via a gateway to internet and on to
other networks (mcimail, compuserve, etc). All the user needs to do is
enter his email address and turn the feature on.

  EMAIL bob@hal.com
  EMAIL ON

When the EMAIL feature is turned on the packet message will be deleted
at the time of forwarding through the gateway. So care should be taken
that the paths are correct prior to turning the feature on, for instance
enable it, send a test message, and disable it. After a successful
transfer re-enable the feature. To disable the auto forwarding feature
simply type:

  EMAIL OFF

Messages can be sent by packet users to the internet users via the gateway.
This applies to users at N0ARY as well as users at other bbs's. Begin by
sending a message to IPGATE@N0ARY with the first line of the message being
the letters "To:" followed by the internet address of the recipient.

  N6ZFJ de N0ARY >
    sp ipgate@n0ary
  Enter your subject:

```
    Meeting?
  Enter your message body:
    To: bob@hal.com
    Are you planning to attend the club meeting on Thursday? Give me
    a call. 73, Connie
    ^Z
```

NOTE: That the recipient cannot respond to the message unless they are a ham and registered with the gateway. He/she becomes registered by sending a message from his internet host to gateway-request@arasmith.com.

REMOTE USERS:

Remote users are those that do not log into N0ARY directly but merely appear from the packet world to use it as home. If a packet user checks the "White Pages" for a remote user the entry comes back as @N0ARY. The packet user then address his message to YOURCALL@N0ARY and the bbs will do the translation and forwarding to internet.

It is not necessary for a person to know your actual internet address nor use the SP IPGATE method described above. From the packet network it appears that you are just another user at N0ARY.

WHITE PAGES:

The "White Pages" is a distributed database of all the bbs users. Most bbs users in the US are represented in the database as well as many from other countries. When a user chooses a home bbs, that bbs generates an update that is sent to the regional servers and then distributed to all the other bbs's. An entry consists of; call, home bbs, first name, zip, city and state. When a user wishes to send another packet user a message he/she consults the white pages (WP) for the home bbs.

REGISTERING:

Before a user, both local and remote, can send a message from internet into the bbs system he/she must register with the gateway. This is done by sending a message from the host that he/she intends to use to gateway-request@arasmith.com with the following information:

```
  CALL:
  FIRST NAME:
  CITY & ST:
  ZIP:
```

When a request is received the "From" field is copied directly into a file with the requesters call. Whenever the gateway receives a message bound for packet it scans this file comparing on the "From" field. When a match is found the gateway uses the associated call from then on. If there is no match the mailer bounces the message with a one-liner

indicating the the user must register.

If you currently use another bbs as home this needs to be stated in the request. Otherwise you will be assigned N0ARY as your home. If you choose not to use N0ARY as your home you must make sure people know to send your message to YOURCALL@N0ARY to pass through the gate. Your WP entry will be wrong.

EXECUTING BBS COMMANDS REMOTELY:

Many of the commands available to local users is also available to remote users by sending a message to the bbs. Here is a subset of the commands currently available.

LIST	listing messages
LOOKUP	look up calls in the on-line callbook
WHO call	dump a users account information
READ	read messages and files
USERS n	display the last n users to connect to the bbs
INFO	display manual pages of various topics
CD	change directories in the file system
LS/DIR	display the contents of a directory
WP call	look a user up in the "White Pages"
HELP	get help on how to use a command

Not all commands available to local users can be accessed via the gate. All interactive commands are disabled as well as commands that modify the users account.

The command parser for the bbs is very powerful and the user can form very complex requests. For instance the following command is valid on the bbs:

```
LIST LAST 20 BULLETINS FROM N0ARY
LIST ALL BULLETINS ABOUT KENWOOD
```

The ABOUT keyword is used to search the subjects of messages for a given pattern, in this case KENWOOD. It can appear anywhere in the subject line.

This is an example of how complex all the commands can become. They can also be abbreviated down to the level understood my most other bbs programs. Any of the following will give the same results.

```
L< N6ZFJ
LIST FROM N6ZFJ
LIS < N6ZFJ
L FR N6ZFJ
```

In most cases a minimum number of unique characters is needed to distinguish a command.

You can get a list of commands and a translation chart from W0RLI
to N0ARY by typing the following commands.

```
  INFO COMMANDS
  INFO W0RLI
```

Other commands that you may wish to execute are:

```
  INFO MANUAL
  HELP HELP
  HELP LIST
```

Now that you know what some of the commands are this is how you go
about executing them. You send a message to cmd@bbs.arasmith.com
with your commands entered one per line or separated by semicolons.
For example if you want to know if three of your buddies are in
the white pages and if the bbs has any messages about the ICOM W2A.

Send to:

```
  cmd@bbs.arasmith.com

  Subject: you can put anything here
  wp n0ary n6zfj n6une
  list all about w2a
  .
```

The bbs will execute the commands and respond to you via return mail.

SENDING MAIL TO PACKET:

Once registered the user is free to begin using the gateway to send
messages from his host through the gateway into the packet world.
How much you have to specify of a users address depends on how much
the bbs already knows about the user.

If the bbs knows the home bbs of the user and his home bbs is know to
the the N0ARY bbs, which most of them are, you simply need to supply
the call.

```
  n6zjf@bbs.arasmith.com
```

If the N0ARY bbs doesn't know of the user but does know where his
home bbs is then you need to supply just the home bbs call in
addition to the users.

```
  n6zjf%n6qmy@bbs.arasmith.com
```

Notice that the call and home bbs are separated by a percent sign '%'
rather then the '@' which is used in the packet domain. This is because
the '@' has a meaning in the internet address.

If the bbs has no knowledge of either the user or his home bbs then
you probably have the wrong home bbs or it is a new bbs. In which
case you will have to supply the full address so the bbs will know
how to route the message.

  n6zfj%n6qmy.#nocal.ca.usa.na@bbs.arasmith.com

This level of addressing is hardly ever needed and normally means that
the home bbs is in error.

Bulletins can be sent in a similar fashion. The address is made up
of a keyword, which can be any six character word and a distribution.
Distributions are local to an area. For instance SBAY is valid in
northern CA, it probably has no meaning at all in Topeka, KS.

Valid distributions are:
     ALLUS   please avoid this one
     ALLUSW   all western US
     ALLCA   all California, any 2 letter state should work

So if you trying to find a cw filter for a Kenwood TS440.

Send to:
  want%allca@bbs.arasmith.com

  Subject: Kenwood TS440, CW filter
  If you have one of these you are willing to part with please
  give me a call or leave message, thanks.
  73, N6ZFJ@N0ARY.#NOCAL.CA.USA.NA
  .

Be descriptive, brief, and always include your full return address in
the message. Also please try to limit your distributions to small
regions. Using the ALLUS distribution really slows down the flow of
messages.

INFO ON THE N0ARY BBS:

The bbs came into being in July of 1990 and as of July of 1992 had
over 600 users, 500 registered as home. The bbs has 3 rf ports, 2
phone ports, the internet port, and a voice synthesizer port. The
latter allows users to check for messages via DTMF from their handhelds.

The bbs itself runs on a Sun workstation under Unix. The code was
written by Bob Arasmith to focus on the user. Great care was taken
to make the bbs very forgiving to the novice user but very flexible
and powerful for the old-timer. The bbs can be configured to interact
with each user differently. Some examples are:

 * List messages in either descending or ascending order.

 * Specify a list of keywords that the user wishes not to see displayed

when a list is performed, similar to a kill file.

* .signature and .vacation files.

* Specify how many lines the users terminal is capable of displaying before scrolling, the bbs will feed info this many lines and pause allowing the user to catch up and continue or abort the operation. Similar to more.

* Users can put commonly executed commands in keystroke macros that are accessible via a single keystroke.

A manual is currently available describing the commands and their permutations. This manual will be available in late 1992 as a postscript file. Run the command INFO MANUAL to learn how to get one via the post office. It is not available in an ascii format.

If you have any questions about the internet gateway or the bbs in general please drop me a message.

73, bob
n0ary@n0ary.#nocal.ca.usa.na
bob@arasmith.com

Hi all;

Just got my basic certification yesterday and am now in the market for a handi talki with the goal (once cash flow improves) of getting into packet.

Shopping around Ottawa, I have narrowed my selection down to two units:

1) ICOM IC-P2AT 2m band @ $375 canadian; and
2) ICOM IC-24AT 2m and 440 @ $460.

I am really new to all this and would like some advice on how I should proceed. Is the addition of 440 worth 85 canadian (aprox 43 cents US ;>). Any general comments about these radios?

Please remember that the untimate goal is to set up a packet station and also to have some fun with Satelites.

73 de VE3XMJ (Dave Mercer)

PS. If there are any packeteers out there from the Ottawa area, I would love to hear from you.

hey,
I'm looking for information about solar technology.
Are there any companies who produce solar power modules
of about 2 kW. Does anybody know if one can buy
low voltage refrigerators which work with solar energy.
I also need information about medical equipment which
works on solar technology. For example lamps, centrifuges or
other medical machines.
It would be nice to get some adresses of companies (worldwide)
or any other information (e.g.FAX-No.or Tel.No.).

thanks, Jochen

I would recommend a company called "Real Goods" based in California.
They carry a number of 12volt products as well as some no electrical based
refrigerators, ie propane fueled.

After my post for info on Spread Spectrum this
is a summery of the info I got. So anyone else who wants to
play with SS can.
I had many request for the info I might get, so I think it would be
nice to put it here.

Thanks to all who sent me info.

A group meet in Redwood City on the second Wednesday of the month.

by Randy Roberts, KC6YJY. You can get hold of him at 415-726-6235.
Tell him "Steve" sent you ;-)

Steve KA6S

I'm also interested in spread spectrum applications, primarily for data communications. One place to look for information is the ARRL Spread Spectrum Sourcebook. It has construction projects as well as a lot of information on the technology and capability of SS systems. It also covers the legal aspects of SS operation.

I'm thinking of coming up with an SS data transmission scheme that would use the entire bandwidth of an OSCAR transponder -- at a power level just above the noise floor -- for a 56kb data link.

If either of you gets more information, add me to your list of interested parties.

Thanks,
-- Bruce Toback
KN6MN

See Electronics World + Wireless World "Voice link over spread spectrum radio" by James Vincent G1PVZ. This series began in Sep 93 issue describing a complete Direct Sequence system from microphone to the antenna (435 MHz) and from the antenna to the loudspeaker.

The classical reference is "Spread Spectrum Systems" by Robert C Dixon, ISBN 0-471-88309-3 (2nd edition 1984). This book is quite readable compared to many other scientific books.

Paul OH3LWR

In a previous post, Marc Lombart (ranfry@CAM.ORG) wrote:
:   My knowledge of Spread Spectrum is quite limited, but my
: understanding is that it would probably not be viable as a HAM node,
: seeing as it takes many times the normal bandwidth for each "channel."
: The main use of Spread Spectrum is security, not communication. At
: least, that is what I know from the little I have found on the subject.

Security depends on the algorithm you use to "spread" the signal, so
you can make it pretty public if you want to. (I think current FCC
rules limit ham useage to a few well-known algorithms.)

As far as my limited understanding goes, the main advantage is
coordination: a set of well-coordinated and efficiently-used
conventional channels are more efficient of spectrum space than spread
spectrum, but you can throw a bunch of spread-spectrum users into a
band with *no* coordination and do almost as well. It really pays off
when users start moving around or coming and going with no warning.
That makes it ideal for consumer applications, the advantages for hams
are less clear.

The ARRL publishes a book on the subject that is supposed to be a
pretty good intro.

You might try sending calling TAPR (don't have their address handy). I
think they were experimenting with some 900MHz spread spectrum packet
stuff in Southern California... some sort of wide area high speed net,
I believe.

Ken Friberg
friberg@mtu.edu

Hi, there are a number of ways to genarate PN codes. One way is to just
write a program that generates random numbers each between 0 and 1 (or -1 and 1)
However this does not satisfy some of the conditions that the PN seqs must meet in
a (rather) realistic environment.

So another way is to use m-sequences, which have well-defined correlation

properties. But the problem here is that you can only genarate that many
different seqs for a specific number of shift registers. In other words the
more m-seqs you want the more (hardware or) software you have to write to generate
them.
Finally another way, is to use Gold sequences, which basically is a combination
of m-seqs. With this method you can generate even more PN seqs with only a few
additional lines of code. All of the above has been implemented before, and I
amsure you'll find a lot of material.

If you need more information, about books, papers (on Spread Spectrum) and even
the code let me know.

regards

-stavros

>To answer Keith's question, get a copy of the ARRL _Spead Spectrum

>to operate SS. You can convert an IC4AT to a 70 cm hopper, and there
>are plans for building PN spreaders using common off the shelf parts.
>Outfits like Qualcomm have chipsets for complete systems, but if you're
>learning and experimenting, it's probably better to build your first
>units with simple TTL blocks so you'll understand what's happening.

There are other references kicking around, and for a completely
up-to-date one, see if you can track down the September and October
1993 issues of _Electronics & Wireless World_. The September issue has
a very good overview of spread spectrum (concentrating on direct sequence),
and the October issue has construction information on a 435 MHz direct
sequence spread spectrum system. The articles were written by James
Vincent, G1PVZ.

In typical spread spectrum fashion the transmitter is (relatively) simple,
while the receiver is quite complicated. It uses some very interesting
techniques for acquiring and keeping correlation, and does not
need an external reference like some of the stuff in the ARRL spread
spectrum book...

Just in case, no, I have no connection with E&WW, or with Reed Business
Publishing. I have no idea who Mr. Vincent is, though I do like his
style.

73 from Burnaby
laura VE7LDH

I recall seeing "the Spread Spectrum Sourcebook" as part of an ARRL literature ad in a recent QST. I am aware of at least one newsletter devoted to this, and I seem to recall that there is a recent commercially-available amateur product that
is a Spread Spectrum modem/radio. Sounded neat - think the creator was in AZ, but could be wrong.

Me? I haven't seen/done spread spectrum since I was a satellite jock in the USAF back in the seventies...

Neat stuff, though.

I am interested in giving Amtor a try. I do not want to use one of the "do all" type of boxes like the PK232 since I have no real nead for all the other features. (I use a DRSI board and TNC 1 & 2 for TCP-IP.) What I am realy looking for is a simple interface board to plug into a pc-xt or the likes along with some software. I have no problem hacking together hardware. Any ideas ?

This is being posted for a SYSOP at N3LA who does not have access to the

Net.
==========

Hi Roy,

Rather than chop out some headers entirely, I would favor recoding to make a typical header read as: (fake example)

R:910110/1839 21308@KB3PU.PA.USA.NA
vs
R:910110/1839 21308@KB3PU.PA.USA.NA [ZANY ARC - Norristown, PA] Z:12345 N:NODE

Allow the minimum needed by hierarchical forwarding and a bit of auditing and bag the rest (hard coded!) for a 50% saving.

I am told MBL software handles a message sent as "SP XXXXXX@W1AW.CT.USA.NA" with no problem, but chokes on one sent "SB XXXXXX@W1AW.CT.USA.NA" until the sysop creates a flood file for W1AW. PRMBS handles ANYTHING. I dunno what yours, RLI or CBBS do, but doesn't the concept of hierarchical forwarding dictate there should be no problem from either preceding example?

On this same general idea, why do some coders parse the H-address from left to right and others right to left? A message from CA to a bbs in Michelin provence, France (a fabricated example) gets to Maine and gets bounced back to Michigan cuz some software is more interested in the .MI. part than in getting it to France (.FRC.), or better yet just to ".EU" to begin with. Let those French stations worry where .MI. is after it gets to France!

My point? A little more "common sense" in the code and some better docs so the sysops will set up forwarding routes better and we could cut down on circuitous forwarding and increase reliability. With that we need less auditing and maybe can bag all R: headers except the one from the originating BBS. Til then we need something to help locate the systems with serious mail delay problems and maybe to trace a full return route for stuff that can't deal well with H_addressing.

Definitely DON'T keep "last 'N' headers plus original; if you must, keep first 'N' so as to have 'N-1' chances to get a return msg to a BBS which maybe "knows" the originator. The idea of needing a full return path in this era of H_addressing is bad, but when the original route begins in Maine, goes to Canada, down to Florida and arrives in Maryland ten hops later. . . Why should it return THAT way? Sheesh!

Let's also do something with explicit expiration dates on bulletins. Let the poster of a Kepplerian bulletin (as just one example) that will be stale in two weeks flag it to expire in 10 days to 2 weeks. If it is still plying the ALLBBS route at that time, it dies automatically. Why deliver stale mail @ALLBBS or @AMSAT or ANY flood route? Of course a message to a particular ham would not expire before delivery.

Thanks for the opportunity for input. I am grateful to all you hard-working programmers! Thanks!

Hello There. I have been reading with interest the discussion on headers
and suppressing them. I have a couple of points (questions) on the matter.

First as I understand it, in the US unattended HF stations (forwarding PBBS's)
were originally only allowed by the FCC because full message tracing
was provided by the BBS headers. Is this correct?

If this is the case, then just deleting headers would probably be a bad
idea. Anyway the advantage of headers is the ability (in hopefully the not
to distant future) for the BBS programs to determin their own routing of
messages from these headers (and removing one of the more tiring duties
of being a sysop).

I would like to see a development of G1NNA's idea implemented. Something
like the following.

1). Each message will always include the originating BBS's full R:etc type
header.
2). Each message should have the R:etc header from the immediately past
BBS the message passed through.
3). The rest of the BBS headers get condensed so that only the callsign
AND HIERARCHIAL ADDRESS is included (since the H-Address can help with
routing through the network also).

To maintain some degree with the current network, the order of the headers
would be,

    Immeadiately past BBS
    Originating BBS
    Path that the message has taken inbetween.

To signify the path lines, a new field could be introduced with a P:etc
type so that an example of a condensed header might be,

Test of message goes here.

As far as I can tell, that would still be completely compatible with all
existing BBS code, all path data is still retained and routing determination
could still take place. (opps, just noticed that one of my P:etc lines
had a lower case "p", ment to be an upper case).

I welcome any comments on this idea. Please do not send E-Mail. I wont
have E-Mail till late February. Post all replies to this newsgroup
or send them to me on the Packet Radio BBS Network to,

   VK5ZWI@VK5TTY.#SA.AUS.OC

Let me preface this by saying that I have absolutely NO experience whatsoever in the HAM radio arena other than a degree of facination and occasionally listening in as several of my friends enjoyed their radios.

Having said that, I know that HAMs tend to be very friendly and helpful folks, so I will throw my question (request?) at you in the hope that perhaps you can point me in the right direction or offer some suggestions. Thanks, and be kind to my mistakes!

Now, to the issue at hand. I have a friend who is heavily into HAM and is searching for some software for the Amiga 1000 that would allow him to use it with his radio (at this time I can't recall exactly what that make and model of his radio is... nuts ... well at least I know that it has the necessary port on it and mentions that ability to make such a connection in the manuals) for RTTY or any of a number of other things he mentioned that I didn't quite follow.

I realize this request is sketchy, but if anyone out there in net.land knows of any such software, of perhaps an FTP site where something like this might exist, or even any tips or pointers on how one might go about writing such software, I would be most thankful! If possible, reply by e-mail to the address below, as I don't generally read this newsgroup.

Thanks!

Awhile back I sent a problem into the users group on a KAM and the

STA light remaining lit. Here is an update and question(s).

Summary: I have a KAM on 2.85 (now), was using 3.0.
Computer is clone 286 16mhz AT

Follow-up: The following cards are in the pc:
a) Soundblaster (IRQ5)
b) New serial card with (2) 16550 chips COM1 & 2
c) Old serial card (contains joy,2 ser,1 par)
I pulled out the jumpers for all except the par port.
If I were to configure the card for com3and4 that

would conflict sound card (irq5) as they are the

same interrupt. I am using this card only for lpt1.

d) Bus mouse (irq7)

Every card except the old serial card is installed. As soon as I install this card, the STA light will remain lit at some undetermined time.

This card does not have a called out "uart" but a programmable serial interface. Has anybody ever run into this as a result of using net? The card is called I/O 80 made in Taiwan.

Questions: Can IRQ2 be used ? IRQ2 appears to be used by AT for direction to other interrupts. (unclear about this).

Does anybody have concrete proof that Kam 3.0 firmware is faulty?

I have heard from some IPers that it is not advisable to go beyond 4800 baud due to limitations in NET. This sounds strange to me, could someone give me that straight scoop on this?

Thanks in advance for your time,

Jay Appell -KA1SNA

Station LY2WW in Vilnius, one of the important links between Lithuania and the
outside world, was captured and destroyed by Soviet troops. At this point the
fate of the operators is not known.

It is feared that the Soviets were alerted to the existence and importance of
this station through widespread publicity on amateur radio nets and
listservers.

BALT-L is itself operating under wartime guidelines. We will not identify
sources for information coming from the Baltic States. We will definitely not
be publicising targets for Soviet reprisals, or identifying radio fgrequencies
for the benfit of jammers.

We can only appeal to everybody handling information on these acts of war
against the Baltic nations to consider their responsibilities for their
actions.

Oops! In my previous posting, I misspoke myself: The scc driver assumes
multiple boards share the same interrupt. This has to be supported by
the boards' hardware, i.e. to use the daisy-chained 8530 interrupt
scheme, with only one board actually causing the interrupt. The PC100
supports this; I don't know about the DRSI. Two boards on a PC or AT
bus cannot share interrupts otherwise, as the interrupt lines are not
open-collector.

The PC100 has a jumper for the chip interrupts so that you can chain
the interrupts across boards, with only the first board providing the
actual hardware interrupt to the bus.

Sorry for any confusion this might have caused.

a local ham, no newsgroup access, is trying to run nos with 2
DRSI boards. he has the following:

drsi pcpa type 2 @ 300h
drsi pcpa type 1 @ 310h

both use int 7 (not sure if this is selectable on the board -- i
                don't own drsi boards)

he has tried several combinations of the drsi and scc drivers
with less than workable results. is it possible to use 2 drsi
boards with net or nos? if so, what version of net/nos? also,

i'd appreciate a sample set of attach commands for each board to
pass along.

73 & thanks...

I recently bought a pair of DRSI PC Packet Adaptor cards one type-1
with the built-in 1200 bps modem and a serial port, the other a type-3
with two serial ports.

I offer the following information for those of you who might be thinking
about buying one of these.

1. You don't get schematics. They cost extra.

2. The pinout given for the 25-pin serial port on the type-1 card has
the clock in and clock out pins interchanged on the chart in the manual.

3. The pinouts given for the two 9-pin serial port connectors on the
type-3 card are wrong. The pins are listed in 4 places, and in each
of those places, they are not only wrong, but the 4 listings disagree
with each other.

4. Check for solder splashes shorting chip pins together.

5. Check for bent-under pins on the socketed chips.

6. Be sure you have a few extra Berg jumpers in case you didn't get
enough of them with it to make the card work.

7. Before you unplug the 1488 and 1489 chips to get TTL levels on the
serial ports, be sure to write the part numbers on the board since the
diagram they tell you to refer to for chip locations does not in fact

show any chip locations.

8. The instructions for jumpering the type-1 board for external clocking to interface it with a DSY modem are wrong. In fact, I was never able to get mine working with a DSY modem; I wound up using a PI board instead. Other people have, but they have early revisions of the PCPA board and some of the pins and jumps must have changed in the mean time.

9. ARRGH. For this I spent $125 each? Next time I'll wire-wrap my own, thank you very much.   Bleagh.

I have an application where I need to run ka9q NOS along with another program, on a fairly small ibm clone. The problem is that ka9q is just too large. I have obtained the sources, and have been able to compile it, but when I try to cut parts of it out, I can't compile it anymore. All I need is the tcp/ip, the ethernet card support (via a packet driver interface), ping, smtp, and (maybe) an ftp server. I don't need ax25, telnet, or any of the other stuff. And I need this to run in under 200K on an ibm pc.

Can anyone help me? Perhaps someone has already built a very small version of net.exe without all the bells and whistles? Thanks in advance.

For some years now computer programs have existed to decode RTTY, CW and the
like. Would it not be possible to implement a packet TNC in software in order
to avoid the need for an expensive off-the-shelf TNC? After all, a TNC merely
consists of a microprocessor bolted to a radio modem. It would be necessary to
built a hardware radio modem but that should be no real problem.

Has anyone out there written TNC software, or know of anyone who has? If anyone
can supply me with detailed info on the packet protocol (AX-25?), and details
of the radio modulation (I assume FSK, if so, what shifts?), I'd quite like to
tackle the project myself.

You can use two or more cards with the scc driver, providing they
are set up contiguously, i.e. card 1 at 0x300, card 2 at 0x310,
etc.. They can't share the same interrupt with the scc driver
(although the hardware on some boards, such as the PC100, supports
daisy chaining 8530s to a common interrupt). I will send you some
sample attach commands for the drsi.

Bill:

I believe the complete plans for several of the Mode A transponders are
in the Davidoff's "Satellite Experimenter's Handbook." You should check
there.

Bob

Subject: Packet with the SINCLAIR Z80?
Message-ID: <1260047@hpnmdla.HP.COM>
Date: 16 Jan 91 22:47:08 GMT
Organization: HP Network Measurements Div, Santa Rosa, CA
Lines: 18

Hello Net Users

I have a friend that has a box full of SINCLAIR Z80 computers that is
interested in getting his feet wet on packet and doesn't have a whole
lot of money to spend.

Does anyone know of any easy way of turning one of these beasties into
a dumb terminal? Is there a ROM available to replace the existing BASIC
firmware? How about an RS-232 interface?

Also, short of wrapping the thing in aluminum foil, has anyone ever rid
one of these dinosaurs of its terrible RFI?

If you have anything for the good of the net, please post a reply, other-
wise email. Any info appreciated...

                    Don Montgomery, K6LTS
                              donm@hpnmdla.HP.COM

Sounds like you haven't really disabled your old serial card. I'd remove
it.

|> Questions: Can IRQ2 be used ? IRQ2 appears to be used by AT for
|>   direction to other interrupts. (unclear about this).

IRQ2 works on the AT bus. But it is used by VGA (and EGA, I think)
cards to signal a vertical retrace interrupt, so I'd pick another
vector.

|> I have heard from some IPers that it is not advisable to go beyond
|> 4800 baud due to limitations in NET. This sounds strange to me,
|> could someone give me that straight scoop on this?

It depends on the hardware. Almost any machine with a 16550A can work
at
9600 bps, even slow CPUs like the 8088. However, if you have a plain
serial port you may have problems running 9600 bps even on faster CPUs.
Try it and see; the 'asystat' command will show you how many receiver
overruns have occurred. When a 16550A is available it will also show
the "high water mark" in the receiver FIFO. It will always be at least
4 since that's where the trigger point is set, but it can go as high as
16 before you lose characters.

Phil

rec.ham-radio.swap:920
Nntp-Posting-Host: thesis1.hsch.utexas.edu
Originator: jmaynard@thesis1.hsch.utexas.edu

This is a formal call for votes for the proposed reorganization of
rec.ham-radio.*. The discussion period started on December 4, 1990, and
has run for just over the required 30 days (extended from the original
ending time of 31 December 1990 due to the Christmas and New Year's
holidays). Please read this entire posting before sending in your
vote; the ballot to be used is at the end. I'm processing ballots
automatically, and not following the instructions below may result in
your vote not getting counted.

THE PROPOSAL:
=============
The following groups are to be renamed:
rec.ham-radio   => rec.radio.amateur.misc
rec.ham-radio.packet => rec.radio.amateur.packet
rec.ham-radio.swap   => rec.radio.swap
Groups will be renamed by creating the replacement group, asking site
admins to alias the old group to the new one, and rmgrouping the old
group after traffic in it has died down, hopefully about a month later.
This method has been shown to work in other hierarchies.

The following groups are to be created:
rec.radio.amateur.policy
This group is intended to contain any and all discussion about policy
issues pertaining to amateur radio, including, but not limited to,
rules, regulations, laws, and legal actions by and against amateur
radio operators. This group is to be unmoderated.

rec.radio.cb

This group is intended to contain discussions related to Citizens' Band radio. This group will be unmoderated.

RATIONALE:
==========
1. Why move the groups at all? The primary motivation is to make it easier for interested people to find newsgroups related to ham radio. The rec.radio hierarchy was created after rec.ham-radio (net.ham-radio before the Great Renaming). It is an inconsistency in the namespace to have groups for similar purposes separated from each other, and that makes it harder for new users to find the desired groups. Further, this allows a change from ham radio to amateur radio (see next topic).

2. Why .amateur instead of .ham? It has been pointed out in discussion that "ham radio" is primarily an American term, and carries little meaning outside the US. In addition, there are negative connotations attached to "ham" that don't apply to "amateur". Some confusion also exists in the public mind about just what a "ham radio operator" is, as evidenced by the occasional "ham operator jams aircraft frequencies!" when the person in question has never been a licensed amateur radio operator.

3. Why a .policy group? A significant part of the traffic in rec.ham-radio is concerned with issues of policy. This includes substantially all of the flamage, which has in the recent past included such subjects as whether or not it's legal to order a pizza via an amateur repeater, the proposal to add a class of license that does not require knowledge of the International Morse Code, and the legality of modifying amateur equipment to transmit outside the amateur bands. The new group is intended to move the flames and the long discussions that never seem to get anywhere out of the main group.

4. Why use the name .policy, instead of .rules, .regs, .regulations, etc.? The group is intended to contain any and all discussion about any policy issues pertaining to amateur radio. This includes not just rules and regulations of the FCC and other national regulatory bodies, but also laws affecting hams (such as the infamous New Jersey scanner law), lawsuits over nuisance issues, antenna ordinances, frequency coordination and band planning, and the like. .policy is the best name that has been suggested for the group out of many possibilities.

5. Why not a .tech group? There are two reasons for this one. The first is that there's more to ham radio that's non-inflammatory than just technical discussions, and the object of a new group is to move the flames, not run away from them. A .tech group would leave those of us who are interested in more than just technical discussions, yet not in the seemingly endless legal discussions, left to wade through the flames. Second, Brian Kantor, who maintains the info-hams mailing list, has said that info-hams will continue to gateway rec.ham-radio (and, presumably, rec.radio.amateur.misc) only, and moving the technical postings off would deprive those on the mailing list.

6. Why create a .cb group? There is currently no place for Citizens' Band radio discussions explicit in the hierarchy. These postings currently wind up in rec.ham-radio, where they tend to generate flamage all out of proportion to their volume.

THE MECHANICS OF THE VOTE:
==========

The voting period will run from Monday, 7 January 1991 until Monday, 28 January 1991. Only votes received during that period will be counted. Each proposal is a separate vote, and must be voted on separately under the Guidelines for Group Creation (which have been applied to renames as well in the past).

Please edit and send in the ballot below. Each ballot will be stripped of all but the From: line and the lines containing valid votes by an automatic process; I won't see any comments included. No individual acknowledgments will be mailed. Votes will be acknowledged en masse in a posting on Thursday, 18 January 1991, and complete vote results will be posted on Tuesday, 29 January 1991.

For each proposal, indicate your choice of a yes vote or a no vote by placing a Y or N, respectively, at the beginning of the line. The first character on the line that is either a Y or an N (case doesn't matter) will be counted as your vote on that proposal. You may abstain from any particular vote by deleting the line entirely from the ballot. An invalid line (one not containing a Y or an N before the "Proposal #n:" tag) will be treated as an abstention, as well. Mail the completed ballot to me at this address, jmaynard@thesis1.hsch.utexas.edu, with the characters "VOTE" somewhere in the Subject: line. (Again, case doesn't matter.) Replying to this message with your newsreader's mail reply command ("R" in rn, readnews, vnews, and vn; I don't know nn's commamd) will work fine. Votes posted to the net will be summarily ignored and may earn the poster a free flame from the net.police.

THE BALLOT:
==========
 ?   Proposal #1: Rename rec.ham-radio to rec.radio.amateur.misc
 ?   Proposal #2: Rename rec.ham-radio.packet to rec.radio.amateur.packet
 ?   Proposal #3: Rename rec.ham-radio.swap to rec.radio.swap
 ?   Proposal #4: Create rec.radio.amateur.policy
 ?   Proposal #5: Create rec.radio.cb

Such a standard would mean changing *all* the machines we might want to
talk to on the Internet -- if I understand one interpretation of what
you said. Define "destination machine".
A possiblity would be for "gateway" machines to receive net 44 AMPR
packets, redo the network addresses, send the packet on the Internet,
and when receiving packets, change back to net 44 according to some
table. That might work for most applications.

Maybe I missed the discussion of viable solutions, but I think the
bigger question is why don't we do it right (e.g., fully connect net 44
or go to class C/B nets for different areas.

   be needed in getting set up?

   Robert S. Radvanovsky, KC6ONL

I am not expert, being in the newcomer limbo state of having passed my
first exams (Tech) but waiting for my ticket, but I assumed this hadn't
been done because it would be illegal, for the same reasons reverse
autopatch is illegal: traffic initiated by non-hams would cause the
"gateway" to transmit without control. Perhaps a mail-only store-and-forward
gateway would
work, but then some poor soul would have to manually screen and forward
each message. Am I way off base here?

Getting the routing right is just a technical difficulty which we could
solve.

To the best of my knowledge (as an about-to-be ham), there is *no*
gateway (router) between net 44 and the rest of the Internet. While
there may be some political & legal questions, the major reason I'd say
is technical.
IP routing between networks assumes each network is fully interconnected
internally. That implies that any node advertising a path to a net 44
system (say, in NY) can also pass packets to any other net 44 node (say,
in Montana). At this date, that assumption is badly broken. Correcting
it would mean some kind of complete connectivity between AMPR sites
world-wide, or a rather drastic change in IP routing technology. The
latter is more likely. 8-)
That's not to say there aren't other ways...
-

a
****

I think you will fing a legal question when it involves access to the
packet network. It has to do with non-hams accesing the airwaves. If you
would read the article in December,1990 QST, page 79, on "Reverse Autopatch"
it goes through and talks about the legality of accessing the repeter. It
would be nice if mail could be forwarded through the Internet/Packet network.

73's.....

I recently posted a question on these newsgroups asking for what
people knew about getting the home PC on the internet, and one on
rec.ham-radio.packet asking what the scoop is on using amateur packet
radio for this purpose. I`d like to thank all the people who took the
trouble to respond. There were a fair number of me-toos as well, so I
made up a summary of what I understood on the subject from the
responses and elsewhere, but due to the fact that a) some of the
responses had some considerable detailed info that might be of
interest to people and b) my knowledge of networking in its thousand
forms has sizeable holes in it I decided it would be a good idea to
append all the responses. The resulting file is 100K, so I'm not
posting it. You can get it by sending a message to
fileserv@max.berkeley.edu with a line in the body (not the subject!)
that says "sendme ip_hookup". It will arrive in two parts.

Here is the micro-summary:

Q: how do you get an internet address, and how do you
make the physical connection?

A: The affordable option is to work for a university or other
organization that has an internet hookup, or have a buddy at same, and
convince the relevant authorities to attach you to one of their

existing nets. You use a modem and phone line to connect to one of
their computers, running SLIP protocol. Said computer acts as router
for you between its LAN and the phone line. If you're lucky you might
even get the thing to work with dial-up connections instead of a
permanent leased line and save a buck. As far as the outside world
knows, your home PC is one of their computers.

Q: Suppose I'm willing to settle for news and mail?

A: There are thousands of ways, including uunet, nixpub, fidonet, or
picking someone at random from comp.mail.maps.

Q: How do I get a registered domain name? And what software should I
use?

A: I didn't ask these question, but I got lots of replies to them
anyhow. Get the longer summary for the answers.

Effectively, this is what I'm talking about. But given the
possibilities of inconsistant tables and the number of possible net 44
addresses, it is better to replace "redo" with "add" in your
paragraph. You don't want gateways to have to reserve large blocks of
address space.

But *where* are you going to "add" things in an IP packet that *each*
destination machine doesn't have to know about? I can see your scheme
working if it only concerns using the existing Internet to interconnect
net 44, but I also see BIG problems in using that scheme and trying to
'talk' from net 44 to the rest of the Internet. What's the functionality
desired?

If I understand you correctly, the same might be accomplished by IP
loose source routing, which is standardized and wouldn't require
breaking existing routing code in intermediate systems. The routing
algorithm on the machine on the Internet would have to have additional
smarts to determine the correct path from the 44.x.x.x address.

********** MILITARY RADIO OPERATIONS **********

I'm passing this along to the Amateur Operators here on the echo.
There has been a rash of patriotic amateurs operating on the military
frequencies and on the MARS frequencies. Although the intention of
the amateurs on the frequencies are good, their activites on these
frequencies are prohibited.

****

On CNN, there was an operator from NYC operating on 11.176MHz using
his amateur call, contacting a MAC flight headed to the war zone.

****

Please keep from transmitting on the military and MARS frequencies
as it interfers with operations.

****

The other day we had an amateur asking for a signal report on a
MARS phone patch frequency, while a patch was in progress. He was
more than 50KHz out of band and caused some confusion between the
serviceman and his family. Put yourself in the serviceman's shoes
and how you would view the situation.

****

If you know of anyone doing this, please ask them to listen only.
You can SWL all you want, just refrain from keying up, please.

****

If you are interested in helping, contact the MARS operators in
your area and take the training for your certificate.

Thanks for your time. KB4YLY / AFA2GN

SENDING MAIL/BULLETINS

Most BBS programs use the same commands to send mail and bulletins. One of the most common mistakes in sending messages of any type is the confusion between what is mail, and what is a bulletin. The issue gets further confusing when trying to determine how to send a bulletin meant for all BBSs is a given bulletin distribution scheme.

Generally, there are three commands for sending mail and bulletins:

A) S.....Most BBS programs treat the S command as a command to send a PRIVATE message. For instance: entering S KA3RFE will send a private message to KA3RFE...but only on the BBS you enter the message on. If KA3RFE does not use the BBS you are entering the message on, the BBS program will try to forward the message to KA3RFE...but ONLY if that BBS has KA3RFE listed in its forwarding file.

If you try to send a bulletin using S alone, the BBS will still treat that message as a private message. So, entering a bulletin using "S ALL @ MDCBBS $" will result in a private message to NOBODY at MDCBBS except for SYSOPS, because a private message to "ALL" could only be read by sysops or a ham who's callsign is "all". Since "all" is not a legal callsign, nobody else can read the message

Did you notice the "$" in the example above? To send a bulletin out to other BBSs, the address has to include the $. This tells the BBS that the bulletin should be forwarded out to other BBSs. So, you must include that $ if you want the bulletin to be sent to other BBSs.

B) SP......The SP command means "Send Private". This tells the BBS that the message you are sending is "eyes only" for the addresssee. The sysop will be able to read that message but no one else will be able to read it. This is the same command as the plain S command. To avoid confusion, you should always send your private messages to another ham using the SP.

C) SB.....This command means "Send a Bulletin". There are two types of bulletins you might send. One type would be only for users of the same BBS you are entering the bulletin on. If you were connected to KA3RFE BBS and you sent a bulletin reading "SB ALL", the BBS will treat it like a local bulletin and it will only stay on KA#RFE. If you sent a bulletin titled "SB ALL @ MDCBBS" the bulletin will still be considered a local bulletin on KA3RFE. Why????? To send a bulletin which you want forwarded to "ALL @ MDCBBS" you have to tell the BBS you want it forwarded.....THATS WHAT THE "$" IS FOR. So, if you want your bulletin sent to every BBS which accpets the MDCBBS distribution scheme, you have to add that $. The correct way is "SB ALL @ MDCBBS $".

So, to sum up....use S and SP for PRIVATE messages. ("Mail"), and SB for BULLETINS. Dont forget the "$" in the address if you want

your bulletin to get forwarded.

Try it out! Send me a private message to KA3RFE @ KA3RFE.md.usa. If it
gets here, I'll send you a reply.

This bulletin is being re-sent at the request of several people:
"GARBAGE CHARACTERS"
You may see some very strange-looking characters flitting across your
moniter's screen from time-to-time. Those funny-looking things are
symbols for binary data being transmitted. There are several sources
which use binary data instead of text. Net/Rom nodes use binary data
in their nodes broadcasts. The purpose of the node broadcasts are
to inform other nodes within range what nodes they can connect to.
The data is binary for reasons of accuracy.

Another source of garbage characters is binary file transfers from a
BBS to a user. These transfers are generally executable programs which
the BBS might have stored for downloading by users. These differ from
text files in that the binary code contains control characters and
computer programming commands which cant be sent as text files.

A third source of garbage characters is tcp/ip packets being sent
between two stations using that protocol to exchange files or mail.
Tcp/ip is a protocol which has several different layers to it and
can be used to interface with some of the major computer networks
such as those used by colleges and government computers.

So, if you see funny-looking symbols on your monitor, dont panic, its

just binary traffic going by.

Subject: msys help
Status: R

Could you put a msg out on the internet about a problem with msys version
1.10? The problem is that mail will not forward to an IP station if
it is left on or forwarded to the msys bbs by another station (other
than the sysop).   If the sysop leaves mail, it forwards fine. AX.25
outgoing mail is not affected. Have asked the author (wa8bxn) for help
but have not received a reply yet.

BTW, there is still an incompatibility between NOS and Msys with
ax.25 forwarding into the NOS mailbox. NOS does not seem to send a
line feed (or CR?) after the "Subject:" prompt and the msys station
just sits and waits for the LF which never comes. Result - msys
just hangs up and does nothing until the sysop aborts forwarding.
MBL and RLI forward OK into NOS however MSYS forwards just fine
into NET. It's a standoff and sounds like the NOS guys are pointing
the finger at BXN and BXN is pointing the finger at NOS. Any help?

I'd like to know if any other MSYS sysops or users are experiencing
these problems. Thanks Rick kc2fd @kc2fd.ny

---end forwarded message---

You may post any replies here on this group. I will circulate them to
Rick and the other guys on the local LAN.

>But *where* are you going to "add" things in an IP packet that *each*
>destination machine doesn't have to know about? I can see your scheme

This is for net 44 sites piggybacking on the internet.

You add a complete additional ip header at the gateway and strip it at the
other gateway. Destination machines see only 100% normal ip packets.

Someone pointed out that loose source routing should be able to do this
already.

>working if it only concerns using the existing Internet to interconnect
>net 44, but I also see BIG problems in using that scheme and trying to
>'talk' from net 44 to the rest of the Internet. What's the functionality
>desired?

The suggestion was only a way to do the former. There are no problems
with the rest of the internet, the gateway would not do any
encapsulation when sending a packet to the rest of the internet.

The problems with routing from random internet sites to net 44 sites
is independant of this.

If I (a net 44 site) initiate a connection with site foo.com, is there
any way to tell it to use loose source routing to my gateway bar.com
(and then to me, 44.xx.xx.xx) to get packets back to me? Can this be

done securely?

SETTINGS CONTINUED

There are two more setting which you must consider when setting up your
tnc. These settings have much to do with how well your RETRY rate is.

PACLEN: PACLEN is short for PACket LENgth. It tells the tnc how many
            letters, numbers, and spaces should make up the length of the
            packet your tnc sends out. Most people use a PACLEN of 128
            characters, which is ok under most circumstances, I suppose,
            but that depends highly upon how good the path is between
            stations, how crowded the channel is, and a couple other
            factors. On my BBS and node ports here, I use a PACLEN
            of 80 on my UHF port (when its operating....) as I dont have
            all that great of a path to the more distance stations, while
            my 2 meter port has a PACLEN of 180 and my 220 port runs a
            PACLEN of 120. The differences are due to channel loading,
            distance, and radio/antenna performance factors.

BY THE WAY: PACLEN is NOT a substitute for inserting carriage returns in
your transmitted signals. All PACLEN does is tell the tnc to transmit a
packet after X number of characters have been inputted. If you make up a
 long message on a word processor and dont insert any carriage returns in
the text, the message will scroll right off the screen of anyone trying to
read the message! I am inserting carriage returns as I type this message. If
I didn't, you wouldnt be able to read the bulletin! I put my carriage returns
at the end of each line I type. When this bulletin gets forwarded out, the

PACLEN setting will send X characters out, carriage return and all, and the finished product when you read it, will be exactly as I typed it.

MAXFRAME: This is the last setting you need to worry about right now. MAXFRAME works with PACLEN to determine how much information your tnc will send out at any one time and will consult with RETRY to give you the bottom-line total thruput. (Thruput? ....all thruput means is how fast the job it getting done... when packets are just zipping along and being acked real fast, that's high thruput...)

MAXFRAME means how many packets you want to have out un-acknowledged before more packets are sent. On a nice quiet channel where you are in within spittin distance of the station you are communicating with, MAXFRAME can be as high as 4 or 5. However, hardly anyone is on a nice quiet channel, so your MAXFRAME setting has to be set to reflect conditions. If the channel is real crowded and noisy, or if you time-out a lot with a high MAXFRAME, you might want to consider setting a MAXFRAME of only 1 or 2.

On my UHF port, the channel is both busy and I have a poor-to-fair path to most of the stations I connect to. So, I set a MAXFRAME of 1. On my 2 meter and 220 ports, I set MAXFRAME to 2. I probably could get away with a setting of 4 on 2 meters and 220, but the channels are busy.

A NOTE ON THE "$" IN SENDING BULLETINS

I've heard from many sysops and two BBS software authors on the use of the dollar sign in sending bulletins which are to be forwarded out from the BBS you're entering it on. The info is being passed on here, somewhat modified to reflect the possibility that you may not know which sort of system you are using.....

The WA7MBL BBS requires that you send bulletins to be forwarded out in this manner:

SB ALL @(USA, etc) $

Other BBS systems dont require it, but if you are not sure which type of BBS you are using, you can enter the $ with no harm done. In fact, it may be a good idea to use the $ anyhow. It wont hurt, and wont make any difference if the BBS does not need it.

(Thanks to all you sysops who sent me the info I needed to clear that up, and a special "thank you" to the two BBS software authors who were kind enough to respond.)

THE DIFFERENCE BETWEEN MAIL AND FILES

When you log onto a full-service BBS, there are two separate things you
can get into: Mail and Files. Some people get confused about what the
two of them are. I know I did when I first got on packet. I thought a
file was a file, whether it was a file or whether it was that long list
of messages you get when you enter an "L" command.

Well, as I found out, they aint the same animal.

When a BBS refers to a "file", it's talking about a separate entry which
is being stored apart from "mail".

I guess I better define "mail" before I get into "files"....its easier.

"Mail" means messages from one ham to another, or bulletins which the
BBS has open. If ham A sends ham B a message, that's "mail". If a ham
sends a message to be read by many people, that's called a "bulletin"
but the BBS still calls it "mail".

A "file" is not mail, nor is it a bulletin; although some bulletins might
be converted to files by the sysop. A file is a permanent part of a BBS.
The file might contain text, or it might be a binary file. (WHAT? I
THOUGHT EVERYTHING IN PACKET WAS BINARY!) Not to worry...everything
packet-ized is binary, but there is a difference in how the information
is kept in the BBS.

Binary files are those which are actually executable programs which can
be downloaded from the BBS. These files require that you have a compatible
binary file downloading program in order to get them from the BBS.

Text files are those which are plain text and you can download them without

needing any sort of special file downloading program. In most BBSs you can get into a text file area in which the documentation is kept with all the commands used by the BBS.

So, MAIL is stuff from ham A to ham B, bulletins are from ham A to a selected audience, but still MAIL. FILES are the more permanent information on a BBS and come in two flavors: text and binary. Text files are sent in simple plain old English, while binary files look like the BBS has got the runs.

Forwarding path: W3IWI WA3ZNW NB3P KA3RFE
SETTINGS:

Nothing generates more frustration than trying to set up a tnc to operate effectively when you dont understand the language. This is a short run-through of the more important parameters which enable your tnc to work properly with minimum hassle.

FRACK: FRACK is short for FRame ACKnowledge. It is the timer which tells the tnc how long to wait for an acknowledge frame from the other station before re-sending a frame. Typically, tncs come with a default value of 4, which is adequate. However, if you are operating on a very busy channel, you may want to increase FRACK to 6, or even 8. A short FRACK value can lead to retrying-out, so dont set it below 4 or so.

RETRY RETRY tells the tnc how many times to keep sending a packet that does not get ACK'ed by the other station. This usually

defaults to 10 from the factory. After the 10th retry, the tnc "times out" and the connection is broken. A value of 10 is just fine. Some people say a shorter value is better but 10 will do. If you set your tnc retry value to 0, the tnc will NEVER time-out! This is NOT a good idea!

DWAIT DWAIT enters a pause in-between transmitted packets to let digipeaters to transmit first. This is usuallly set by local agreement. Ask around to find out what your DWAIT should be.

TXDELAY This determines how soon the packet will be transmitted after the tnc keys the radio. The purpose of TXDEAY is to insure that the first few parts of the packet dont get chopped off by a slow-keying transmitter. You will have to set this based on what sort of transmitter you are using. Good values range from around 30 to 50. Longer TXDELAY values just take up air time.

You can figure that TXDELAY works the same way that you do on voice....you wait a second or so after keying the mic before you start talking....well, thats TXDELAY!

There are more settings which control your tnc, but the above are the ones that make the difference. There are also two settings for your RADIO which are important:

DEVIATION: W3IWI reccomends a deviation of no more than 3 percent for optimum packet operation. A too-wide deviation will reult in lots of retries and timing-outs.

VOLUME: Your volume-control is the most important setting on your radio insofar as receiving packets is concerned. If you have the volume too loud, the tnc will not be able to decode the packets, and, of course, if the volume it soo low, the tnc wont hear the packets. The best method of setting your volume control is to open your squelch and increase your volume control until you see the DCD light on the tnc come on. That's your setting.

Here are a couple of ways that might work:

1) The MSYS bbs has a command J T, which will display all TCP/IP stations
   it has heard. MSYS is pretty popular, you can probably find some in
   your area. Note that MSYS will handle TCP/IP, SMTP, FTP and you can
   telnet to the sysop.

2) Connect to a NETROM node, and issue the 'n *' command. Alot of IP
   stations will have the characters IP as their alias, at least in
   this area. For example:
   IPD:NR0D-9 IPMPLS:G1XRL IPTOSH:G4JEC-9 #IPBUU:N0BUU-9

3) Snatch the AMPR.ORG database from uscd.edu . You might recognize
   some callsigns.

Hope this helps...

In Part 3 I stated that a dollar-sign symbol must be appended to
any bulletin which you want to have forwarded out from the BBS
you entered it on.

I've gotten information that entering the dollar sign is not
required on CBBS and RLI bbs systems for the forwarding-out to
take place. At this point, to the best of my knowledge, the
dollar sign is required on MBL, MSYS, and REBBS systems. There
are other systems which may not require the dollar sign.

Your best course of action is to ask your sysop if you need to append
the dollar sign to your bulletins for them to be forwarded-out.

Those of you who are sysops: I want to make this series helpful, so
correct me if I dont have it correct! I dont know how BQE's system
handles bulletins, nor FISBBS, and maybe I'm wrong with MSYS and
AA4RE...(I ran both MSYS and AA4RE, but I've forgetton and dont have
the docs any more...getting senile...)

The dollar-sign IS required for the WA7MBL bbs and with another
BBS system being beta-tested in Anne Arundel County MD called
"GTEPMS".

Part 5 will deal somewhat with tnc settings....look for it soon!

So I think we have gateways that "know" other gateways to net 44 (this would
have to be independent of the current gateway protocols, but could be done).
Any packet w/ DST=44.x.y.z gets encapsulated & sent to an appropriate
gateway; all other packets get sent via normal routing mechanisms. And now
we get to the hard part:
Somehow we have to be able to hndle traffic to/from 'random' internet sites.
>
>If I (a net 44 site) initiate a connection with site foo.com, is there
>any way to tell it to use loose source routing to my gateway bar.com
>(and then to me, 44.xx.xx.xx) to get packets back to me? Can this be
>done securely?
RFC 1122 (Host Requirements) says the IP implementations MUST be able to
generate Source Routing (btw, i think you want strict vs loose) and fwd
packets according to it. And TCP implementations MUST retain a source route
for a session and use that route in replies.
So, in theory the problem is solved -- except for two minor details:
(1) How do you propose to generate that source route in the first place; it's
possible, but not readily automated, nor robust {Hmmm. Might be able to see
a way ->gateways that ping non-44 destinations w/ record route; too bad that's
not a MUST implementation);
(2) How many hosts are RFC1122 compliant? {Phil, does NOS support it? Or
should I check the code...} Anybody know of a TELNET that lets you specify a
source route?
--
Jon has suggested the *possibility* of some work-arounds; is there anyone out
here that wants to try (besides me) these or try finding another way?

The following is the first in a series of a very good beginners guide to packet put out by a MD packet BBS sysop, Pete KA3RFE. He has given me permission to pass it along to this forum. He considers it required reading for all who got new TNC's this X-mas and as a refresher course for those of us who sometimes forget the basics.

You know who they are, the ones with "PK-232" in their callsign field? Pete determined that "PK" was an old prefix for the Dutch West Indies. We wrote the ARRL to see if we could get DXCC credit for working them. So far no response :-).

Remember, the following is KA3RFE's, not my own. Replies and criticisms should be sent to AMPR KA3RFE@KA3RFE.MD.USA.

MSG # TR SIZE TO FROM @BBS DATE TITLE
4673 B# 3444 ALL KA3RFE MDCBBS 910106 ATT: New Packeteers
Forwarding path: W3IWI N4QQ N2GTE KA3RFE
This is for those of you got new tncs for Christmas and are just starting out in the Wonderful World of Packet. There are some things you should know that your tnc manual may not have mentioned.

Some terms which get people confused:

1) Home BBS: A "home BBS" does not refer to the mailbox program which your tnc may have in it's guts. It refers to a full-service BBS which handles personal mail, bulletins, and file transfers. Your "home BBS" would be a full-service BBS which you might check into often to read bulletins and to pick up any personal mail which might be held for you. If you have arragned for a full-service BBS to forward your personal mail to your mailbox, your home BBS still remains that full-service BBS.

   This term is important as several BBS programs will ask you to enter a "home BBS" the first time you connect to it.

2) Node: You can figure a "node" to be something of a packet switchboard which has the ability to operate on several frequencies. A node differs from a digipeater in the sense that it handles all of the packet housekeeping chores within its program. Most nodes have more than one operating frequency and they can shuttle packets back and forth via any number of intermediate nodes. The benefit of using a node over a digipeater is that the node will find the quickest way to make the connection whereas a digipeater will only try to connect you to the station you tell it to connect to, regardless of whether the digipeater can hear it or not.

   You cannot send mail to a node. It is not a mailbox or a BBS.

3) Network BBS: A network BBS is a full-service BBS which is operating

under a special node-compatible software program. Network BBSs will show up in node broadcasts and can be connected to over the node network by entering a connect request to the network BBS alias.

Generally, a network BBS will have an alias in which either BBS or BB is part of the alias. For example: ANNBBS is the alias for KA3RFE BBS in Annapolis; BWIBBS is the alias for WB3V BBS in Severn. BBJ9X is the alias for AJ9X's tcp/ip BBS in Westminister.

The network BBS alias is ONLY FOR CONNECTING. You should not use the network BBS alias as an entry for "home BBS" when your are asked to enter your home BBS. Use the callsign of the BBS and not its alias as your home BBS when asked to enter it.

The same goes for sending mail to a netowrk BBS. If you enter a message to KA3RFE @ ANNBBS, the message will never get there since ANNBBS is only an alias for use in connecting to it over the node network. IF you enter a message to KA3RFE @ KA3RFE, the message will be forwarded without much hassle.

I strongly suggest that you throurghly read your tnc manual and also suggest that you get a copy of "Your Gateway to Packet Radio" from somewhere. Its the best book yet written on the ins and outs of packet radio.

73, Pete, sysop KA3RFE (ANNBBS)

There is a version of NET (older than NOS) available from OSU.
It works well, I have had it running here for a couple of months now
with out a problem. I also was abel to get it to run on an ATT 3B2 and
a SUN without any real problems.

I am currently working on getting a current version of NOS to work. I
need the routing and all. I will make it available as soon as I have
something reasonably stable.

     Don't forget that the data can *move* with the airplane, too. Imagine a
store-and-forward system on a cross-country flight. Upload all the eastbound
traffic while the 747 is sitting at the terminal at LAX, then download it 6 hours
later at JFK!

     Of course, after going through all of this trouble, you could just as well
have thrown a magtape on the flight. What's the bandwidth of a 747 with a
reasonably sized magtape flying cross-country?

     :-)

Approved: lear@turbo.bio.net
Xref: gmdzi news.announce.newgroups:785 rec.ham-radio:18872 rec.ham-radio.swap:900
rec.ham-radio.packet:3355

This is a formal call for votes for the proposed reorganization of
rec.ham-radio.*. The discussion period started on December 4, 1990, and
has run for just over the required 30 days (extended from the original
ending time of 31 December 1990 due to the Christmas and New Year's
holidays). Please read this entire posting before sending in your
vote; the ballot to be used is at the end.

THE PROPOSAL:
=============
The following groups are to be renamed:
rec.ham-radio   => rec.radio.amateur.misc
rec.ham-radio.packet => rec.radio.amateur.packet
rec.ham-radio.swap   => rec.radio.swap
Groups will be renamed by creating the replacement group, asking site
admins to alias the old group to the new one, and rmgrouping the old
group after traffic in it has died down, hopefully about a month later.
This method has been shown to work in other hierarchies.

The following groups are to be created:
rec.radio.amateur.policy
This group is intended to contain any and all discussion about policy
issues pertaining to amateur radio, including, but not limited to,
rules, regulations, laws, and legal actions by and against amateur
radio operators. This group is to be unmoderated.

rec.radio.cb

This group is intended to contain discussions related to Citizens' Band radio. This group will be unmoderated.

RATIONALE:
==========
1. Why move the groups at all? The primary motivation is to make it easier for interested people to find newsgroups related to ham radio. The rec.radio hierarchy was created after rec.ham-radio (net.ham-radio before the Great Renaming). It is an inconsistency in the namespace to have groups for similar purposes separated from each other, and that makes it harder for new users to find the desired groups. Further, this allows a change from ham radio to amateur radio (see next topic).

2. Why .amateur instead of .ham? It has been pointed out in discussion that "ham radio" is primarily an American term, and carries little meaning outside the US. In addition, there are negative connotations attached to "ham" that don't apply to "amateur". Some confusion also exists in the public mind about just what a "ham radio operator" is, as evidenced by the occasional "ham operator jams aircraft frequencies!" when the person in question has never been a licensed amateur radio operator.

3. Why a .policy group? A significant part of the traffic in rec.ham-radio is concerned with issues of policy. This includes substantially all of the flamage, which has in the recent past included such subjects as whether or not it's legal to order a pizza via an amateur repeater, the proposal to add a class of license that does not require knowledge of the International Morse Code, and the legality of modifying amateur equipment to transmit outside the amateur bands. The new group is intended to move the flames and the long discussions that never seem to get anywhere out of the main group.

4. Why use the name .policy, instead of .rules, .regs, .regulations, etc.? The group is intended to contain any and all discussion about any policy issues pertaining to amateur radio. This includes not just rules and regulations of the FCC and other national regulatory bodies, but also laws affecting hams (such as the infamous New Jersey scanner law), lawsuits over nuisance issues, antenna ordinances, frequency coordination and band planning, and the like. .policy is the best name that has been suggested for the group out of many possibilities.

5. Why not a .tech group? There are two reasons for this one. The first is that there's more to ham radio that's non-inflammatory than just technical discussions, and the object of a new group is to move the flames, not run away from them. A .tech group would leave those of us who are interested in more than just technical discussions, yet not in the seemingly endless legal discussions, left to wade through the flames. Second, Brian Kantor, who maintains the info-hams mailing list, has said that info-hams will continue to gateway rec.ham-radio (and, presumably, rec.radio.amateur.misc) only, and moving the technical postings off would deprive those on the mailing list.

6. Why create a .cb group? There is currently no place for Citizens' Band radio discussions explicit in the hierarchy. These postings currently wind up in rec.ham-radio, where they tend to generate flamage all out of proportion to their volume.

THE MECHANICS OF THE VOTE:
==========

The voting period will run from Monday, 7 January 1991 until Monday, 28 January 1991. Only votes received during that period will be counted. Each proposal is a separate vote, and must be voted on separately under the Guidelines for Group Creation (which have been applied to renames as well in the past).

Please edit and send in the ballot below. Each ballot will be stripped of all but the From: line and the lines containing valid votes by an automatic process; I won't see any comments included. No individual acknowledgments will be mailed. Votes will be acknowledged en masse in a posting on Thursday, 18 January 1991, and complete vote results will be posted on Tuesday, 29 January 1991.

For each proposal, indicate your choice of a yes vote or a no vote by placing a Y or N, respectively, at the beginning of the line. The first character on the line that is either a Y or an N (case doesn't matter) will be counted as your vote on that proposal. You may abstain from any particular vote by deleting the line entirely from the ballot. An invalid line (one not containing a Y or an N before the "Proposal #n:" tag) will be treated as an abstention, as well. Mail the completed ballot to me at this address, jmaynard@thesis1.hsch.utexas.edu, with the characters "VOTE" somewhere in the Subject: line. (Again, case doesn't matter.) Replying to this message with your newsreader's mail reply command ("R" in rn, readnews, vnews, and vn; I don't know nn's commamd) will work fine. Votes posted to the net will be summarily ignored and may earn the poster a free flame from the net.police.

THE BALLOT:
==========
 ?   Proposal #1: Rename rec.ham-radio to rec.radio.amateur.misc
 ?   Proposal #2: Rename rec.ham-radio.packet to rec.radio.amateur.packet
 ?   Proposal #3: Rename rec.ham-radio.swap to rec.radio.swap
 ?   Proposal #4: Create rec.radio.amateur.policy
 ?   Proposal #5: Create rec.radio.cb

Hello all,

Thanks to all who responded to my 300 bps KISS problem. I got the clue from toth!dave@ria.ccs.uwo.ca (who seems te be unrechable for me, at least I got my message to him back 'undeliverable'), who advised me to set the TXTAIL to about 200 milliSeconds. I am using the PA0GRI version of KISS for the TNC-1, and it seems, that the transmitter it not held in transmit state long enough to send out the complete packet-frame. Holding the transmitter ON for an extra 200 mS cured the problem.

I just wanted to thank everybody who helped me with my problem with repect to my PK-232 generating way too much noise. Some have asked me for the results so I thought that I would post this article that I sent.

-Tom

> 73 de Dick

Hi Dick,

Well, I have made progress on many fronts.

First of all, I received a copy of a letter from N5KNX (article included at end) which gave me the belief that this problem can be solved.

I opened the box to discover that all except one screw hole has paint on it. Therefore the case is either not grounded at all or is very minimally. I removed the pc board and scraped clean to the aluminum all screw holes on the inside and out, except those that would be visible. I also connected a wire directly from ground on the pc board to the screw clips on the side.

This effort reduced the noise significantly. However, I realized that if I also bring the previously mentioned wire out the back and connect it to a good earth ground, it reduces 90% of the noise. Sniffing around shows that the rest comes mostly from the power lead. I haven't put toroids on yet, but I imagin that it will really help.

Finally, I've realized that an HT rubber ducky doesn't cut it in an area that is very crowded with packet activity. So I made a J-pole antenna, bought some coax, fed it through the walls to the attic and boy what a difference it makes.

FLAME ON ****************************** :
I am pretty DISGUSTED with AEA. I cannot believe the poor quality of their product with respect to this problem. It would cost them little or nothing but a little care to prevent their box from polluting my shack with so much noise. Judging from the response that I got this is NOT an isolated problem. (When I called them, they claimed they never heard of anyone having this problem ... HAH, PHFUUUUI). The people where I bought it from tried to blame it on the HT! I say if there is no noise, the HT wouldn't have any problems. You can bet my next packet product won't come from AEA, and I strongly suggest to all net readers to think twice before they purchase their noise maker. (Besides, it's big, power hungry and old technology. Stick with CMOS and ASICS)
FLAME OFF ****************************** :

-Tom

Subject: Re: TNC generates noise

Tom, I remember reading of similar complaints from a Heath pk-232 kit builder and others. Here's an article describing a fix:

Article 864 of rec.ham-radio.packet:
Path: usl-pc!usl!dalsqnt!pollux!killer!ames!pasteur!ucbvax!decwrl!decvax!tektronix!tekcrl!tekgvs!jans
From: jans@tekgvs.LABS.TEK.COM (Jan Steinman)
Newsgroups: rec.ham-radio.packet
Subject: Quieting the PK232 (use finger stock)
Message-ID: <4671@tekgvs.LABS.TEK.COM>
Date: 20 Feb 89 18:54:49 GMT
Organization: Tektronix Inc., Beaverton, Or.
Lines: 39

There has been much discussion about noisy packet controllers in the group, and I've suffered with my PK232 for quite a while.

I put the PK232 across the room, and made up a hunk of coax with a 51 ohm resistor on one end for an RF sniffer. I discovered it was impossible to isolate -- noise was coming right through the cover of the PK232.

My first, feeble attempt involved scraping the paint from around the screw holes of the cover and putting star washers between the cover and the base. This made it just a bit better, to the point where my sniffer probe could detect a slight increase in noise around the 12VDC power cable. When a radio cable was connected, however, the noise went way up.

I went and bought a handful of .1 uF caps, and some small torroid cores. The schematic revealed good bypassing on the key and RS-232 ports, but none on the radio ports. I put a .1 uF to ground on every egressing lead that didn't already have a cap across it, and cut the trace from the 12VDC as close to the jack as I could, inserting as many turns of #18 enameled wire I could get on my small torroid. (It measures about 700 uH.)

At this point, I tried sniffing again. Radiation from egressing wires was very low, but there was still quite a bit coming right through the case. I found that the board was only attached to the case at one point. I scraped the paint >from all the board mounting locations, and ran the shortest possible wires from board ground to all of the floating mounting points, using star washers against the case. Still noise.

Then I located some RF gasket finger stock, and scraped the paint along all the edges of the case and base, cutting and applying the self-stick brass finger stock all around the case junction.

This thing is RF tight now! I can sometimes, on some bands, detect a small difference between PK232 on or off, with my IC735 connected to the radio port and sitting right on top of the PK232! Before, such a set up would have wiped out almost everything on HF!

>Path   : GB7IMB!GB7DOI!GB7GUN!GB7BNM!GB7VRB!GB7SEK!GB7UWS!GB7UWS

>From: G6FCL@GB7UWS.GBR.EU
>To: ALL@GBR

Hello, here is a repeat of the Baycom bulletin for those who may have missed it over the festive season, Baycom = TNC free Packet Radio!

Baycom V1.20 is the PC version of Digicom, written by the Masters of Digicom, Florian DL8MBT and Johannes DG3RBU and as you can expect, the program is nothing short of brilliant.

The program will support upto 9 available user ports, a Binary file transfer (Baycom to Baycom) that leaves YAPP in the cold.

Baycom will support, MDA/MGA/CGA/MCGA/EGA & VGA, the latter in 43 line mode. Each screen is split three ways, TX/RX/Monitor, even the monitor can be seen in the lower few lines of the screen even when connected, you can even re-transmit text from this part of the screen!

Baycom, like Digicom uses only a simple modem to give you full Packet facilities, you simply do not need a TNC! For users or ex-users of Digicom, who have a standard Digicom modem fitted with AM7910 modem chip and ILQ74 style quad (or two times dual) opto-isolators, can by simply adding one 1N1418 diode and replacing one resistor, use their modem quite happily with Baycom, the outlay is 4 pence!

Baycom uses either Serial ports COM1 or COM2, it does not use normal TX Data or RX Data lines from the RS-232, instead the following are used: DTR/CTS/RTS & GND.

It is hoped that Baycom will be issued with English documentation and help files (we are working on them now) very soon, if you are fairly competent with your PC, you should be able to get up and running quickly even without these.

So if you'd like a copy of Baycom on either 3.5" 720K or 5.25" 360K diskette PRE-FORMATTED, return mailer, Postage for return of your disk and letter (see below). If you'd like details of a simple (very) modem to use on VHF with this program or details of how to convert your existing Digicom modem, please include a little something to cover photocopying costs.

IMPORTANT NOTE:

The program will be supplied only to those who accompany their diskette with a letter stating quite clearly that: They will make a donation to the Baycom team (20DM has been suggested) this is about eight pounds, if the intend to use the program and that they will not "Reverse engineer" or modify the program. On the second point, both Florian and Johannes make it quite clear at their dismay at the antics of those who "lined their pockets" from the ill gotten proceeds from the sale of their program "Digicom".

Address for copies:

Jim Mahoney G6FCL,
89 Tyefields,
Pitsea,
Basildon,
Essex,
SS13 1JA.

If you wish to make a donation when sending your diskette, please only send German Currency, so that I may pass it onto the Baycom team in Germany. (You may buy a 20DM note from Thomas Cook's or any High Street Bank, 20DM = Under 8 pounds!).

Before I get another "will it work with my KAM or PK232" message you simply DO NOT NEED a TNC with Baycom, just a very simply modem to interface PC to Radio!

As far as a source for DSP chipsets, I'd recommend two:

   1. Texas Instruments : TI has a three-volume set titled "Digital
      Signal Processing Applications with the TMS320 Family". These

manuals contain theory, algorithms, and code implementation.

2. Motorola: DSP56116, DSP 56000/56001, DSP96002 User's Manual.
   Motorola also has several good application notes based on their
   DSP products (also includes code).

I too am interested in packet-radio. The concept sounds very great and if possible I would like to join in. Unfortunately I am not familiar with current systems and all the terminology. I am hoping some kind soul on the net might point me in the direction of some reference material, standards etc.

I am not aware of any existing packet-radio networks in my area, that doesn't mean to say there isn't though. So I would be greatful if you suggest how I could find out, and get in touch with them.

Rather than buy the equipment I would prefer to built it myself. So I am looking for pointers to the more technical aspects of how they work and not just what they do.

Thanks

I just put the latest G8BPQ code (V4.01) on tomcat.gsfc.nasa.gov. The
file is /public/g8bpq/bpq401.zip.

Someone asked me to look for a recent version of AP-Link on the Internet,
but the only thing I can find is the old v3.93 I put on tomcat many moons
ago... anyone got a pointer to something newer?

The Internet servers are a tremendous asset for software distribution in
the amateur community, but the files available in the packet domain (with
the notable exception of TCP/IP-related software) tend to be incomplete
and outdated compared to what's available on the ham-oriented LL BBS's
and Compu$erve Hamnet. I urge those who have recent files from these
sources, and who are fortunate enough to also have Internet access, to

take the time to upload them (to tomcat, at least), and to make note of
the fact on this mailing list/newsgroup.

Last weekend I finally got a pair of DSY 56kb modems interfaced to my
computers and I'm quite happy with the result; I'm getting about
3kbyte/sec FTP transfers between a pair of 8mhz XT-clones.

I used an Eagle card for the interface on one end of the link, and an
Ottawa PI card on the other end. The PI card is nice, because it's DMA
and the computer doesn't completely die during an incoming packet like
it does with the non-DMA Eagle card.

Bdale reports transfer rates of 6.5kbyte/sec or better with faster
machines or by eliminating disk i/o, so I suspect I'm running as fast
as I can with the slow disk systems I have. MTU and MSS were both
around 1k for this test; larger might be a bit better.

Next step is to ruggedize the modems, boost the power, and interface
something that will work dependably as a packet switch on a 5,000 ft
mountain in lightning storms and power fails. Once we have that, we
can start building a real inter-city network. Yah!

A suggestion has been made to put an upper limit on the number of
headers in a message. What you would then get is the last 'N' headers
plus the original header.

Comments, suggestions???

Has any one modified the PK-232 to display a gray scale
instead of the black and white only pictures ? This would
be great for WEFAX and SSTV !!!

Should I just sell my PK-232 & PCPAKRATT II and get the MFJ
unit that does 8 shades of gray ?

Newsgroups: rec.ham-radio.packet
Subject: HF packet operating (70 lines or so)
Message-ID: <1991Jan9.050007.2814634@locus.com>
Date: 9 Jan 91 05:00:07 GMT
Organization: Locus Computing Corporation, Inglewood, CA
Lines: 65

  During my Christmas vacation, I had a chance to give HF packet a try.
I've enjoyed it quite a bit. It took some geeting used to, VHF FM uses
AFSK Bell 202; not much one can do wrong there. HF (in general) uses
Bell 103 audio tones into a conventional SSB radio. There are two
variables here:

1. The Bell 103 tone pair can be either 1070/1270 or 2025/2225.
2. One can set the radio for USB or LSB.

  Each of the variables actually, in a strict sense, doesn't really
matter. The tone pair one chooses determines where, in the RF spectrum,
the transmitted FSK signal appears (recall that feeding AFSK of constant
amplitude to a SSB radio will generate what appears to be FSK). Using
USB or LSB also shifts the absolute frequency of the transmitted FSK,
and also will invert the tones when changing from upper to lower sideband.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

So, given all this, the problem is, suppose one sees a published frequency for an HF BBS of 14.1033 Mhz. How does one set up to contact this BBS? One well known convention is that LSB is used; which tone pair is used? I'd assumed the lower tone pair was better, since the 2225 Hz uppermost frequency may be into the attenuation of some SSB filters, either during transmission or reception (keep in mind most, if not all, SSB transceivers share the SSB filter for both reception and transmission).

I got on the air and tuned around 14.1033. Wouldn't you know it, to connect to stations there, I need to tune in 14.1023 Mhz. Hmmm. I assume I'm using the wrong tone pair (BTW, my PK-88 defaults to 1070/1270 for HF use...) but one station I contact insists he's running 1070/1270 and his dial sez 14.1033. Hmmmmmm.... he must have been in error, given that I started using the 2025/2225 tone pair and now packet stations appear to be on their published frequencies. Once again, it goes to show, be certain of your facts and don't let other folks whimsically change your mind.

I sure had a lot of fun, even as much to contact several South Americans, including PZ2AC in Surinam. [There's only a couple of dozen hams in that country (from looking at the Callbook)] If any of you have been thinking of trying HF packet, I encourage you to put in the effort. Be patient, though; the lower baud rate and (often) higher error rates can make it tedious, tuning stations in without the benefit of a tuning aid can be frustrating (though one quickly gets to know the correct tones 'by ear') and older, 'analog VFO' radios may require attention to stay on frequency. (Even PLL synthesized radios are prone to some drift; for example, my FT-747 has an option available to replace the PLL reference xtal with a TCXO). Furthermore, 'coherent' DCD becomes a must on HF (though one should be ashamed if he isn't already using it on VHF :-) but, even then, collisions are more frequent.

All in all, a lot of fun. I've had nearly no one suggest 'better' parameters to me (something I often ran into when operating VHF on the N6GPP duplex repeater) and the people operating HF packet seem
<humor on>
to be more technically proficient, probably because they've all had to pass code tests of greater than 5 wpm while many of the VHF packeteers are wimpy 5 wpm technicians (I wonder what the no-code tech will do to VHF packet).
<humor off, don't be so uptight :-) >

>
> Roy -- AA4RE
Sounds like a good idea to me - there's been a lot of discussion about the
length of headers in the UK recently. A slightly better option might be

to have the last N headers, followed by a line (or several!) just showing
the BBSs that the message has been through, then the original header, e.g.

R:910109/1112z 1234@GB7NNA ....
R:910109/1105z 4567@GB7ESX ....
R:GB7MXM,GB7VLS,GB7LDI,.......,GB7MUM
R:910105/2312z 9876@GB7BAD ....

This would then retain full path information for anyone who's interested.

What is the expected delay between placing an order to GRAPES, INC.
for five WA4DSY full kits and their actual shipment?

I've sent my check early November - it has been two months now. Should
I be alarmed? It should take no longer than two weeks for a parcel to
reach Finland.

Does anyone have their telephone (and preferably) telefax number? I'd
like to give them a call.

Sounds like this is a "Catch 22" situation, Roy. One problem with NOT
limiting the number of headers is on BBS's that have a byte limit on

forwarding. The headers are added into the message total and may take
SYSOP intervention to be forwarded if they surpass the byte limit.

Also, a number of BBS's use the header information to add to their
routing files.

Too many headers make work for SYSOPs and eliminating the middle headers
prevents some BBS's from determining forwarding paths.

This discussion took place on the net several years ago when I said
something like "Never underestimate the bandwidth of a station wagon
full of magtapes," which referred to what we used to do when our microwave
link was down. The discussion went on for much longer than I had ever
anticipated, ending up with someone asking about the bandwidth of a
747 full of CD-ROMs. After that, it got silly! :-)

I have been told by a local ham that there is a rumor circulating that
DRSI has filed for bankruptcy.

Can anyone confirm/dis-prove this??

If it is true, is there anyone located near DRSI that could find out if
they have a lot of cards to liquidate. I for one would still buy their
cards and will greatly miss them when they are gone.

It's my pleasure. I do it for the kick and I really do enjoy the technical
tinkering around. Enjoy, is not a strong enough word, I can't live
without it ;-).

I am always at Dayton, missed only once in the last 15 years, and last
year was the absolute pits in that I didn't get to go to the packet
dinner at McNasty's. Since there is little hope that I will be
Ham of the Year ;-), I suspect that I will be at McNasty's this year.

I am also giving talks in the Digital Forum (primarily but not limited
to RTTY, AMTOR, Baudot), the Packet Forum, and the AMSAT forum as well.
AMSAT has adopted officially a new satellite project and so far, Dick
Jansson, WD4FAB and I have been doing most of the technical work on
this side of the pond. I need to report on that project's work and
show some working computers, transmitters and the like.

I hope to see you there.

Bob

   I bought some solar panels at Dayton from the following company. They
specialize in Solvonics marine grade panels that can output considerable power.

   12 Volt Catalog
   110 East Atlantic Avenue
   Delray Beach, Florida 33444
   Phone 1-800-321-VOLT

   Of course, I have no financial interest in the company.

   If there's any additional discussion, I think rec.ham-radio would be more
appropriate than this group.

I have found that the 1274 (which is a 1270 with a tuning indicator) will
only exit kiss mode using the following sequence from NET
param z 255
param z 254
(power down-up)

z = my interface name under NET on the mac.

I think the dox say that only the '255' is needed.
give it a try anyway .... anyone else got any comments ??

The originating BBS header gives the date/time stamp for origination
as well as the information as to the originating BBS. Most software
will also terminate header scans at a line which doesn't match the
header spec so its importnant that any change not introduce a
non-header like line before the last header.

I am going to look at an implentation this weekend which will allow
pretty fine control over max number of headers based on a lot of
different criteria so the SYSOP will have the ability to determine
what he wants to carry.

With the need for and apparent lack of supply of transverters for
high speed packet use, has anyone looked at the articles in the
1985 and I assume later issues of the Handbook?? There are transverters
for 220 and 1296 listed in there, Chapters 31 and 32.

Is there some particular reason why these are unsuitable??

Just curious.

As quoted from <222@platypus.uofs.edu> by bill@platypus.uofs.edu (Bill
Gunshannon):
+---------------
| A local user here has found that his 1270B does not exit from KISS mode
| when instructed to do so. The only way out is to disconnect the battery.
| Is this a known bug in some ROM versions or is there something he is doing
| wrong??
+---------------

Try following the "param ax0 255" with "param ax0 254". The MFJ TNC's require
a RESTART to switch between normal and KISS modes; just as you need to send
the RESTART to get in to KISS mode, you need to send the KISS equivalent
(command 254 as above) to get back out.

At least, that's what seems to be going on. I had problems with my 1278 going
out of KISS mode until I found a little note about this hidden somewhere in
the Fast-Start guide (but *not* in the regular manual, which I had read in
preference to the Fast-Start guide).

| Sounds like a good idea to me - there's been a lot of discussion about the
| length of headers in the UK recently. A slightly better option might be
| to have the last N headers, followed by a line (or several!) just showing
| the BBSs that the message has been through, then the original header, e.g.
+---------------

???

All the local PBBS systems are MSYS (gee, I wonder why? ;-), which shows only
the calls. I didn't know that there were PBBS systems that showed the full R:
lines to users. Maybe there's room for some evolution here?

There was a string here awhile back about how to read corrupted packets
in unconnected mode. (So you can eavesdrop on what is going on on a
channel.) The answer was to turn on your TNC's "PASSALL" mode.

Well, I have definitely confirmed that my Kantronics KPC-2 does not
have this function. It is not in the manual, I get an error message
when I type it from the command line, and nothing like it appears when
I list all commands with the "HELP" function.

My ROM's are version 2.2. I have just got an offer in the mail from
Kantronics to upgrade to version 3.0 for something like $25. Does this
version include PASSALL? Does it also include a mailbox, or do I have
to add RAM or other changes to accomplish this? The flyer they sent
was unclear on these points.

Note I have a KPC-2, not a KAM or KPC-4.

Thanks,

AL N1AL

It's not normally this bad. A combination of back orders, the holidays, and serious illness in the family of our main volunteer has caused an excessive delay. Happily I can report to you that all pending orders have been shipped. You should be receiving yours in a couple of days.

We are strictly a volunteer group and have no office or employees. We do our best, and we care, but don't expect regular commercial service from a few volunteers. We normally don't deposit your check until we ship, so we hope you don't feel too ripped off. Normally we ship a batch once a month, sometimes we do better.

The most reliable way to reach Grapes is via the Post Office box on the data sheet. We pick up the mail once a week, and we usually open it the same day. I will try to respond to all Email sent to me and forward it to the proper people who are actually doing the kits, but you must give me a good reply path. I don't have a smart mailer available to me, so I need a bang path from a well known host.

Gary KE4ZV

These email paths should work. In order of preference:

I am trying to locate software for the Model 4/4P computer that allows it to
become a TNCless packet radio with only a modem being required. Bob Richardson
wrote such a program and marketed it with a manual called "Synchronous Packet
Radio Using The Software Approach, Vol I & II" My contact with Mr. Richardson
was a dead end as it has not been in print for two years. Can someone please help
me locate this?
You can E-MAIL me at SCOOMC@SACEMNET.AF.MIL (26.17.0.144)

Most software will show the full R: lines if the V (verbose read) command
is used. What I was suggesting was that any extra routing lines were
shortened to just a list of BBSs, so if there were 24 routing lines, and
we only want the last ten and the first one, the remaining thirteen
routing lines would be replaced with a single line containing thirteen BBS
callsigns.

How about accept headers as a fact of life and tell the whiners that they are needed ? Ususally the people who bitch about headers are the same ones who transmit glorious beacons about every five minutes.

The standard these day's is a 1200 baud TNC (terminal node controller).
A TNC will take digital signals from your computer (usually via a serial
port), and convert it to audio tones suitable for modulation of your xmitter.
It will also take audio from your rcvr and convert it to digital to feed back
to your cpu. Whoops - 1200 baud is the standard on VHF. On HF, it's 300
baud (FCC RULE). Most TNCS will do either 300 and 1200 baud. Please note
that 9600 baud modems are becoming more popular. The next step up from that
would be a 56kbs WA4DSY modem. The fun doesnt stop there either - some
people are actually using 1 megabps and 10 megabps systems in the microwave
regions. Look into products from AEA and Kantronics. Maybe Bdale Garbee or
Glen Elmore will see this and tell us about Ethernet on the Air.

>net might point me in the direction of some reference material, standards etc.

I have not been too impressed with the books I have seen on packet radio. One
that is OK is Digital Amateur Communications from Radio Shack.

>
>I am not aware of any existing packet-radio networks in my area, that doesn't

Hmm - try ftp to ucsd.edu, and grab the AMPR.ORG database. It will show call signs of the stations running TCP/IP in Australia. Maybe you could talk to some of those people. BTW - KA9Q TCP/IP is really interesting, I would look into it if I were you. It will allow you to network computers over the air waves.

>
> Rather than buy the equipment I would prefer to built it myself. So I am
>looking for pointers to the more technical aspects of how they work and not
>just what they do.

There are some kits that you can buy - the G0BSX card is pretty good. Also, look into the Digicomm for the Commodore 64. It is a few chips that are the skeleton of a TNC. All the framing and such is done by the C64 itself. This is not normal - most TNC's have Z80's on board that do all of the framing.

I am looking for MOD information on the Kenwood TM-941 Tri-band radio.
Supposedly there are mods for out of band operation and also for
cross band repeat. I have not been able to track them down so far.
If anyone has information as to how I can find them I would appreciate
hearing from you.

Thanks;

I don't think the problem is with the USERS seing it. It's more with wasted
transmit time. Most of the information in the R: headers is useless anyway.

The only information in the R: lines that is of any real use is the Date and
time stamp and the BBS Callsign. (The message number may be of use?)

Why don't we just shorten the headerlines to that?

Carl.

You wouldn't feel that way if you needed that information to
troubleshoot a message routing problem, or if the software uses it to
suppress loops (I don't know if it does).

I can say that in the Internet, the Received-From: lines in RFC-822
(internet standard mail) headers were considered important enough that
an explicit requirement was added to the Host Requirements RFC
(RFC-1123) that these lines not be deleted or tampered with by
downstream mail relays.

I'd haave more sympathy for the "wasted transmit time" argument if the
BBS networks were already using data compression.

Phil

Some software (such as mine!) does. That's why I wanted to keep all the BBS callsigns.
>

At least part of the UK network and 90% of the Danish network (ie those BBSs using my software) does use data compression.

As quoted from <8@ipars.UUCP> by scotto@ipars.cts.com (Scott O'Connell):
+---------------
| In my last post I was looking for KA9Q's software for SCO Xenix. I never
| found a Xenix specific, but was able to compile the 890421.1a version of
| NET with little change. This was a great accomplishment for a non C
| programmer like myself. (toot toot) I have also established a SLIP link
| to my MS-DOS PC. It works, but I still have a *lot* to learn.
|
| Could someone advise me of possible problems I will encounter with NET?
+---------------

Locally, we run G1EMM with the works --- RIP, RSPF, and soon NNTP. The old NET software won't understand RIP or RSPF, and won't be able to do anything with NNTP.

I am planning to write a packet TCP/IP package for UNIX/XENIX when I get a multiuser box to replace this lobotomized PC I'm using now. It will be *loosely* based on G1EMM, but will be a rewrite to use UNIX features when available. I will probably include the ability to use native TCP/IP, which will require kernel-level drivers; since I'm thinking in terms of pushable Streams drivers for KISS, AX.25, and NET/ROM anyway, this isn't a problem.
I don't suggest asking me any sooner than a year from now, though, the way my

free time has been going. :-(

I would like to use my tnc1 in kiss mode with the microsats but
have been having trouble getting full duplex mode to work properly.
All the tnc1 kiss roms I have been able to find seem to just key the
transmitter and leave it forever keyed when given the full duplex
command (5 1), rather than key it for each packet. Has anyone
else had this problem (and found a solution)?? 73's Jim KB3KJ

Has anyone had a problem with Kantronics version 3.0 in KISS mode?
The symptoms I see on my KAM are intermittent. The symptoms are
that the STA light stays lit, and may be accompanied by the mark/
space display being dark (as if the hf rig had been xmitting).

Although this may be subtle, Phil Karns book says to run at 4800 baud
and I am running 9600 baud. Could this be a flow control issue with
symptoms that point to data loss between the computer and TNC? Any
help that someone could shed would be appreciated.

I'm in the process of building a router for the local network. It is
PC based, and the question to be solved immediately is one of I/O
bandwidth.

(BTW, the software involved will probably be G8BPQ front-ending NOS as
a combined netrom and IP router. This works, even though it's rather
baroque to set up.)

We have two 9600 bps ports, one 4800 bps port, and one 1200 bps port.

Right now the choice is between using two DRSI PCPA cards or using four
KISS TNCs on async ports (with 16550 uarts). The DRSI cards are the
lower cost solution, but I'm a bit concerned about the interrupt
service required eating all the cpu and i/o bandwidth of the PClone.

Has anyone done any comparisons or can speak to the limitations of the
two schemes, or suggest alternative solutions?

The kh113013 version (G1EMM) of KA9Q has support for the KAM/KPC-4 multi-port
KISS. I have used it with my KAM and run NOS with ports on ETHERNET, HF, and
VHF simultaneously. If you have a KAM, I think Kelvin's code is the way to go.

Anyone interested in an HF IP testbed network (I nominate 18 Mhz. band)

My KPC-2 has PASSALL. I can't imagine why yours wouldn't.
Of course, I also can't imagine why you reall want it.
If you set all the MONITOR commands to ON, you will see everything
except the damaged packetsd which would display as garbage anyway.
But then again, I can't imagine why you want to. It's just as
thrilling as "reading the mail" on 75 meteres.

We are looking at the possibility of installing some high speed trunks for
our network backbone, and the concept of using mod'd ethernet type cards on
shf has been raised. There is talk that some people here in vk use similar
systems, but information seems to be fairly scant.
One of the main concerns is whether it is possible to plug a new ethernet
address prom into the card with the callsign burnt in rather than the
standard ethernet address for station id purposes. We can see no reason why
progression to higher speeds cant be relatively painless if a band is selected
where it wont worry people ...
If anyone has any experience in this area, some pointers would be greatly
appreciated.

I've been running mine at 9600 since before using KISS mode. Currently I'm using it on an SCO Xenix machine on a port that does no RTS/CTS flow control. I kinda expected problems but haven't had any....yet.

Call Kantronics at 913/842-4476. I've *never* made it through to technical support even after several attempts. The lines to _technical support_ are either busy or no answer. Not even a receptionist. They say their hours are 9am-12 and 2pm-5 Central Time, M-F.

Good luck!

I am trying to run NOS to replace my current system (MSYS) and am having trouble getting NOS to work with my setup. I am running 3 comm ports in an MS-400 async card with the AA4RE modification to allow the 3 ports to\ share the same intrupt (IRQ2). Now, this card works with MSYS as it has a built in interupt handler. It also works when you load MBBIOS (another AA4RE product) which is a TSR interupt handler. Using MBBIOS and the modifed card allows you to run the standard bbs programs RLI/MBL etc on the shared port. It also worked with the old NET.EXE (before NOS).

Now, when I try to run NOS with this card and put the correct information in the autoexec.net file, NOS talks to one of the ports but can't hear anything. I can issue a connect command and you see the station trying to answer (on the s meter) but NOS won't hear it. And, the other ports don't work at all. With or without MBBIOS, this problem exists. When using a standard comm port (1 or 2) NOS works fine.

Is anyone using NOS with the MS-400 card (or any other multi-port async card with the diode modification that AA4RE came out with) with or without MBBIOS out there, I am at my wits end (whatever that is..... grin..)

thanks!!

-standard ethernet address for station id purposes.

An excellent idea! Most cards allow something variously called "promiscuous
mode", or "destination address insert mode" where you (in each packet sent to
the board) supply the source and destination addresses. Another really neat
feature in the ability of some cards to define 'groups', whereby one packet
can be selectively received by multiple stations on a group basis. You
could even impliment arp, since broadcast packets are legit over ethernet.
I'd love to see this happen - now I know what I'll use my 10GHz Gunneplexers
for!

I'm interested in following this lie also!!!

But first off, has anyone looked into the ramifications of pulling the ethernet address ROMs and inserting callsigns? The IEEE might get pretty pissed! Although, that means the first byte of the address field would be restriced to an ASCII uppercase letter.

Perhaps a specific address block could be obtained from the IEEE for this purpose, and a petition made to the FCC to allow COMPRESSED ID of the call sign used, that way it would possibly fit into 4 bytes. 6 bits with a possibility of 6 characters, that 36 bits compressed. And that even leaves up to 4 bits for a 1-of-16 designator for multiple transmitters on the same call. Of course, this would be an easy way to get onto the RF with as few as possibly changes to the packet info. Otherwise, a new protocol stack needs to be come up with.

Before the re-programming of ethernet addresses to reflect the HAM callsign is considered, an algorithm for the implementation of that number needs to be established. I propose this start a discussion to try to come up with a scheme NOW to figure out what to do.

The address is contained as a unique number of 6 bytes. These numbers are sold in 'blocks' by the IEEE, and while you don't 'legally' need one, everyone in the game plays by the rules. Also, the addresss needs to contain the FCC licensed callsign of the transmitting station. In 6 bytes, that can be tough.

The FCC approval may be minor, as if everybody does this, then it is the format used, and as long as it is made public, no problem. Perhaps someone more familiar with the rules could comment.

The address 'block' number, if obtained from the IEEE, will probably be 2 digits. Following that, will be be 4 bytes, or 32 bits. If we need to keep up to 4 bits available for a station sub-designator that leaves 28 bits. Now, the question becomes how to compress a call sign to 28 bits, and handle the 'worst case' call of 2x3?

If a 1-byte header was usable, then there would be 40 bits left over. The callsign could easily be compressed to 36 bits using straight 6 bit reps of the characters and chaining them, or even to 31 bits by compressing to 5 bits for letters, and 4 for the number, with a 2 bit pointer as to where the number might be in position from the start. With 31 bits in the address, that only leaves 1 bit for numerical address selection of multiple transmitters if we are looking at a 32 bit limit.

The only other possibility is to use standard ethernet addresses, and imbed the FCC callsign elsewhere in the packet, or at periodic times in the data stream with a 'control' packet that would tie that ethernet address to that callsign.

Of course, all caution could be thrown to the wind, and the callsign just burnt in to the ROM in the clear as ASCII. If these were just for dedicated HAM use, then there is no big problem, but in that case, I would suggest you NOT burn the ROM, but modify the driver to pick up the HAM call and insert it that way.

HMMmm... NI5210's with a packet driver using the KA9Q stuff, over a

microwave link........

The use of commercial network boards for a backborn the cheapest way to go.
See: Bdale at all in the 1 Mbit/sec gunplexer link in 73 and Hamradio. We
can use ethernet boards, but I think that a performance of 1 Mbit/sec is a better
balance between used rf bandwidth, rf power and network traffic.
You could find starlan or systek boards of old networks at very low prices.
I found a lot of starlan boards for $3 a board, but I haven't started
to construct the RF hardware.

I think that identification isn't a real problem. Include in the begin of the
data field the call of the source and destination station. You could also
send broadcast packets those are filed with a bit pattern of your call in morse.
When you do this in a maximum length ethernet packet of 1500 bytes on a 1 Mbit/sec
link, the morse speed is 500 chars/sec (6000 words/min). :-)

When the 2 Mbps 10 GHz microwave link hardware was first built by n6rce
and myself, we had hoped to be able to slow Ethernet cards down and use them
directly, as per n3eua's suggestion. It turned out that 10 Mbps and
a 20 MHz clock was frimly entrenched in the silicon. In addition, I
believe the propagation delays associated with the 1-2 kM (whatever it
is exactly) maximum DX specification (related to packet length and the
certainty that all users recognize a collision) are similarly ingrained.
I think it might work over short distances and probably using the
10 GHz hardware with a few minor changes, but I think there may be
problems if you try to go further. Perhaps with only two hosts sharing
the "cable" the propagation delays and CD stuff can be tricked... I dunno.

Subject: ICOM 725 HF ALL MODE TRANCEIVER - MODULATION LOW

Hi fellow HAMS

I wonder if someone can help me/give me some more info. Sorry to
ask a non-packet question here but I hope you will forgive me.

A month or so ago I bought myself a ICOM 725 HF T/CEIVER with the
AM/FM option included. Everything is working 100% except the
modulation on SSB. On FM and AM the modulationlevel is fine - I am
using the MIC GAIN in the 12 o'clock position (50%) - that is sufficient.
But on SSB I have to turn up the MIC GAIN 100% to get sufficient modulation.
Now I am used to my KENWOOD TS120S - very lively on modulation - never need
more than 50 % on MIC GAIN CONTROL. I phoned the local supplier of
ICOM equipment (where I bought the rig) and he told me that
he knows of other HAMS who experienced the same problem (on SSB). He said
that it is a characteristic of the ICOM 725 - you have to drive it hard
on SSB by using a amplified MIC. To me that is not the answer. Why
doesn't ICOM supply such a mic with te rig then?.   Somewhere
there must be a mod that can be done to get a bit of gain on the mic side.

Thanks for all the trouble - hope to here from you soon.

Best 73 and Merry Xtmas and Happy New year to all.

Dan Pretorius (ZS4VG)

Good grief. Forget all that nonsense. There's no need to go to all
that trouble. You're going to be encapsulating some other protocol's
packets inside the raw ethernet packets, aren't you? Just stick the
calling/called station's IDs *after* the encapsulated protocol's
packet, in plain ASCII. thusly:

```
     enet header & size
          encapsulated protocol's header & size
               encapsulated protocol's data
          encapsulated protocol's trailer(s)
          Called & Calling station's id's
     enet trailer info
```

Much simpler all around.

Instead of modifying the 48 bit ethernet address, how about appending
a 6 byte ASCII call sign to the end of the real data in the packet?
All of the protocols are prepared for trash after the end of the data,
since small packets must be padded to the ethernet minimum of about 60
bytes.

I have already given it some consideration although not in the context
of using Ethernet cards for packet. I have been looking into the
possibility of using a form of IEEE 802 framing for packet. The reasoning
for this being the generally accepted concept that AX.25 offers little
except overhead and the fact that protocols like TCPIP (my main interest)
use UI frames which makes no use of the features of AX.25 anyway.

I believe that coordination with the IEEE would only be necessary if you
planned on using this identifier on an Ethernet with other vendors equipment.
Because every interface has it's own address, I think this is not likely
and conflicts could only occur when a serious mistake happens. By the way,
this is theoretically possible today when you use things like DECNET where
addresses are generated in software and not contained in a prom on the
card.

>
> The FCC approval may be minor, as if everybody does this, then it is

>
COMPLEX SCHEME DELETED

I propose a much simpler system that will not require any FCC approval
because it already meets their approval.

There are six bytes available for an address. The exact same number as
for AX.25 callsigns. It only takes 7 bits to encode the callsigen using
straight ASCII. Therefore, just put the callsign in ASCII and blank fill
the unused bytes using the ASCII SPACE character (decimal 32 -- hex 20).
Use the 8th bit for coding SSID's. That will not only keep the callsign
in plain ASCII for the sake of the FCC, but will allow for more SSID's than
we currently have (6 bits = 64 SSID's.)

I think changing to this method would allow us to use modified versions
of a lot of what is already out there in networking software. Just
imagine, PCBridge running in that mountain top repeater site. Runs easily
in 128K from a floppy. How long before somebody EPROMS it and makes a
bridge from an AMPRO clone board??

Comments??

To those who have responded to the problems I have had with my KAM in
KISS MODE, thanks. Here is an update:

My configuration is as follows:

computer 16Mhz AT<------50 Feet shielded full modem cable--->KAM
Only using VHF/ No HF

PLM: Intermittent STA light stays lit

I discovered yesterday that if I exit NET and bring up a term pgm
like PCPLUS (STA light still on), if I enter a sequence 192 the
STA light goes off and the TNC xmit light cycles up as if to send out
ack. I am still coming up to speed on the light sequences and what
they mean? Does this have to do with an FEND? I noticed in the
Kantronics manual that C0 is a fend and also if I were to pop out
of kiss I would issue a 192 255 192. mmm? What does someone think

about this? Again my thanks for your help in this matter.

Jay

I am trying to run NOS to replace my current system (MSYS) and am having
trouble getting NOS to work with my setup. I am running 3 comm ports in
an MS-400 async card with the AA4RE modification to allow the 3 ports to\
share the same intrupt (IRQ2). Now, this card works with MSYS as it has
a built in interupt handler. It also works when you load MBBIOS (another
AA4RE product) which is a TSR interupt handler. Using MBBIOS and the
modifed card allows you to run the standard bbs programs RLI/MBL etc
on the shared port. It also worked with the old NET.EXE (before NOS).

Now, when I try to run NOS with this card and put the correct information
in the autoexec.net file, NOS talks to one of the ports but can't hear
anything. I can issue a connect command and you see the station trying
to answer (on the s meter) but NOS won't hear it. And, the other ports
don't work at all. With or without MBBIOS, this problem exists. When using
a standard comm port (1 or 2) NOS works fine.

Is anyone using NOS with the MS-400 card (or any other multi-port async
card with the diode modification that AA4RE came out with) with or without
MBBIOS out there, I am at my wits end (whatever that is..... grin..)

thanks!!

>like to get them running on 1.2GHz or higher.

I doubt if any 28MHz/1.2GHz transverters exist, since such a beast would
only give you access to 2 MHz chunks of 1.2GHz (one per crystal).

>Are people running these full-duplex on two bands? How about
>full duplex on one band?

In Ottawa, we've had a cross-band full-duplex 56kb repeater on the air
for about a year. There are some full-duplex 56kb point-to-point links
in the Chicago area... I believe they are in the 70 cm band.

>Is it best to use something like the DRSI card in the PC or
>has anyone connected the 'DSY to an outboard TNC?

Neither of these is a good solution. The former can't run at 56kb unless
you turn off interrupts, so any other interrupt-driven interfaces fall on
the floor when you're processing 56kb packets. The latter can't run at
56kb on the PC interface, period. In my humble (and slightly biased :-)
opinion, the best choice currently available for interfacing the 56kb
modem to a PC is the Ottawa PI DMA board. You can e-mail me for details.
The Cadillac of PC interfaces is the Grace PackeTen board, but it has far
more firepower than you need for a 56kb end user or small packet switch,
and it costs about 6 times as much as the PI. The Kantronics Data Engine
might do for a small switch, but it is crippled for end user applications
by having only a 19.2kb host interface.

>Any tips, clues, cautions would be appreciated.

Go for it! There's plenty of folks on the net who can give you a helping
hand with getting 56kb gear up and running.

>Thanks and 73, Chris

Does anyone have a version of TNC220 firmware that supports KISS??

Does anyone have programming information on the TNC220 that would
allow me to modify the TNC2 version of the KISS EPROM to work in the
TNC220??

I realize that it really doesn't have 2 ports like the KAM and won't
be able to listen\talk on both channels, but I sure would like to use
it as a KISS TNC for VHF. I don't get on HF enough that I really care.

Anybody in Florida that can ask PACCOMM for programming info??

>One of the main concerns is whether it is possible to plug a new ethernet
>address prom into the card with the callsign burnt in rather than the
>standard ethernet address for station id purposes...

It really isn't necessary to burn anything. The actual ethernet address
used by the interface is initially loaded from a prom -- but it is used
out of a register in the chip. Some protocols (DECNET) actually change

the ethernet address of the board based on their addressing scheme.

Additionally, it is not quite one ethernet address per interface -- it is
one address per processor. It is legal and normal for a machine to use
the same ethernet address on all of its interfaces (on different networks).

A while back we got MSYS 1.08 from an ftp site, I cant remember which it was
either tomcat or thumper, anyway, does anyone know of, or can anyone provide
an ftp site for 1.09 of this package as well as the patch(s?) that followed
this versions release.

Regarding the discussion on 10baseR (Can we coin a new term here??, should it
be M for Microwave ?? :-)).
1. Would there be any serious problems with the suggestion of giving the once
   10 minute broadcast of your staions call for id purposes ?? Seems like this
   would be easy to incorporate in most of the software around, eg NOS ??
   it sounds too simple, but if its ok for voice !!?
2. If it were lobbied at the correct level internationally, the concept of
   getting IP addresses recogised as legal identification, based on the fairly
   well defined way in which they are allocated, would probably be a better
   idea !? Im assuming here that most stations using this link speed would use
   a level 3 protocol of some description, and IP would probably be the
   easiest to establish a case for, Any idea's ??

Im pleasantly surprised to see that there is a significant amount of interest
in this area, I wasnt sure if it was a bit of a dream on my part.
I get the feeling that the id requirements OS are easier than those in VK land
, I may be wrong, but ive heard that level3 netrom and routed tcp/ip are both
non-conformant to our DOTC regulations at this time. I understand that there
are moves a-foot to do in VK the same as what ive passed on in comment 2.

Ill collect all the postings on these and related spin-off subjects, and try to
get together a combined posting of the options suggested.

A version of KISS for the TNC-220 is included in the G8BPQ package. Grab
the file bpq359.zip from tomcat.gsfc.nasa.gov, and you'll find it therein.

I don't think anyone has ported the shared interrupt code from NET to NOS.
The author, Dan Frank W9NK, now lives in the Ottawa area... next time I talk
to him, I'll ask him if he's interested in doing it, or knows someone who's
already working on it. In the meantime, consider another possibility: the
G8BPQ code supports the MS-400 in shared interrupt mode (I think), and it
also has a KISS TNC emulator which allows it to run as a front end to NOS.
G8BPQ also has some advantages in its NET/ROM support over NOS, such as
greater configuration flexibility and a familiar interface for the AX.25
users. This combination might be what you're after.

+---------------
| Simpler yet. Have a daemon kick out a packet every ten minutes that says
| "Hi. You're watching packets form W6YX".   Legal, too.

+---------------

Heck, yes. That's how I operated 2m packet while I was still /KT:

```
cmd: unproto id via wa8bxn
UNproto  was CQ
UNproto  now CQ via WA8BXN
cmd: btext KB8JRR/KT, Mentor, OH.
BText    was
BText    now KB8JRR/KT, Mentor, OH.
cmd: beacon every 57
Beacon   was EVERY 0
Beacon   now EVERY 57 (570 sec.)
WARNING: Beacon too often
cmd:
```

The warning before every prompt (blame AEA...) was a small price to pay for the assurance of legality. And it can be applied to any other situations where a packet station needs to give a guaranteed ID. (Well, most. IP stations require either a TNC that will beacon in KISS mode, or recent versions of G1EMM and possibly the other variants. I found it easier to operate on 220 until I had my license in hand, even though my TNC does beacon in KISS mode.)

+---------------

For straight packet, any TNC (aside from the PC bus cards, of course) works and any Mac comm package can be used. I started out using a PK88 and ZTerm 0.85; the PK88 and most other TNCs can be connected with an ordinary modem cable.

Anything else is harder or impossible, unfortunately: I don't think ROSE is available for the Mac, and the only version of the KA9Q software is an old version of NET; the NOS port is still in progress. In any case, I suspect that for ROSE and KA9Q you'd want more serial ports than the Mac provides. But if all you're after is straight AX.25 packet, you don't need anything except a modem cable and any comm software.

AEA has MacRATT and MFJ has MultiCom for the Mac, if you want a fancier interface. I believe you can buy a package from MFJ that includes the modem cable and MultiCom, for the MFJ 1270/1274/1278.

RE: Packet Software/Hardware for the Macintosh

David Johnson Writes:
>I would like to get into packet radio, but it appears that
>most of the software/hardware availble is for PC's. Is there
>any avaiable for the Mac.

Hi David,
  Getting on Packet using a Mac is not hard. You will need to decide on a
TNC to use. The TNC is a personal choice, I'm using a PacCom TNC-220 and
used a PacCom Tiny 2 as a loaner. I used a modem cable from the Mac to the
TNC and had to HOME BREW (yes I did) the cable from the TNC to the radio.

  You will need a terminal program. I am using RedRyder 9.2 for Packet.
I have tried White Knight 11.?? and RedRyder 10.3 on Packet as well. If you

use a terminal program for your landline communications it will also work
for you on Packet. If you go with a Multimode TNC then you will want
software to take advantage of the TNC's extra functions. I have no
experience with the Multimode TNC's.

  I hope this answers one or more of your questions. If not give me a
shout. I know of other Ham goodies for the Mac as well.

I'm leaving this message for a friend who is interested in finding a decent radio
teletype and other related programs (?) for a Sony ICF2010 radio and a XT-turbo
computer. Any replies will be greatly appreciated.

On Decemer 13th, the FCC modified the requirements for the Technician Class license with a code test. This bold move offers great hope to all of us who are deeply concerned with the possibility that amateur radio will one day soon be crushed under the weight of the spectrum needs of other services.

I was disturbed to note, however, that you were reported to be considering asking the FCC to reconsider this action to the extent of confining the new codeless Technicians to 222 mhz and up. I consider this most unwise for the following reasons:

One basic Technician Class license with one written exam + a CW endorsement for those who want to operate on HF would be easier and cheaper for the FCC to administer.

"Ghetto-izing" the codefree Technician Class licensees provides no regulatory or technological benefit. Rather, it serves only to codify social discrimination by preventing the newcomers from coming into contact with the majority of their fellow amateur operators.

Amateur radio constitutes the United States' first National Park of the Mind, and broad, open access to that public resource will provide intellectually stimulating and spiritually refreshing benefits to the nation that narrow, inhibitory access by the privileged few cannot. I believe that that is the basic reason the FCC made its decision.

Amateur radio's greatest contributions to the state of the art occurred during the period of its early history when it was not straight-jacketed by complex regulations and licensing structures not based on compelling need. Preventing or inhibiting the freest possible exploration of the National Park of the Mind consistent with conserving its meaningful existence would tend toward reducing it to the site for historical tableaux similar to those re-enactments of medieval jousting.

There is no compelling need for creating your proposed codefree ghetto. Therefore, any request for reconsideration will doubtlessly be rejected out of hand. The only result of a Petition for Reconsideration will be to make the League look foolish.

Moreover, since the new codefree amateurs are going to revitalize the future of ham radio, resentment against the organization that attempted to cause part of the original promise to be withdrawn would no doubt result in very few of them joining the League, which would very likely become little

more than the custodians for its Antique Wireless Museum.

      To summarize, it's a dumb idea.

A friend of mine, w/o net access, has an Amiga 500 and a PK232. He would
like a dedicated packet program for this setup. He is currently using
the PK with a C64 and cart based software. Any assistance would be greatly
appreciated.

In response to David Johnson's article:

>> get into packet radio, but it appears that
most of the software/hardware availble is for PC's. Is there
any avaiable for the Mac. <<

All you need is a telecommunication package like Zterm, White Knight, or
other and a TNC connected to your Mac with a regular modem cable....and then
you just connect the TNC to your radio. Works like a charm.

Hello Dan,

      There is a packet BBS running out of the American Embassy in Saudi Arabia
using the callsign 7Z1AB. The BBS is intended for handling mail only traffic
for deployed U.S. militaryy personel stationed in the Gulf region.
      If you're intentions are to pass traffic through the net, you can E-mail
a note to Jim Stone - who set up the link, explaining how much traffic
will be passed and work out the logistics.

the E-Mail address for Jim Stone is:

"Jim%taueng.bitnet@mitvma.mit.edu"

Good luck
es 73,
Rich

As per my earlier message to the newsgroup, I have secured a copy of the
latest released MSYS. However, I'm not sure I want to send it to the archive
sites just yet.

The problem is that the version I have is 1.09 (with the patches). Mike
WA8BXN is currently beta-testing 1.10, however. The question is, should I
send out 1.09 now or wait a week or so for the release of 1.10?

(For those who don't want to wait, I can email it --- a uuencoded file in 8
parts comprising MSYS109.EXE, a self-unpacking archive. Please hold the
number of requests down, however, as ncoast is having some mailer problems at
the moment and I have to make sure they go out only after I make some manual
patches to the maps after each pathalias run.)

73,
++Brandon

HOW TO ACCESS THE WB3FFV AMATEUR RADIO TELEPHONE BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the Amateur Community (but there is other stuff on-line). As of now I have not attempted to promote this system any place except in the amateur channels (PACKET, USENET, & word of mouth), and will continue under this policy, as I hope to keep it oriented toward amateur radio. The various software for UP/DOWNload is available via telephone dialup and Packet TCP/IP, and through user support I hope to keep the latest and greatest ham software on-line. Below is the information that is needed in order to access the BBS via Telephone -or- TCP/IP, please pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs
Number: (301)-625-0817 -- 1200 & 2400 (Non-MNP)
Number: (301)-625-9482 -- 1200 & 2400 (MNP5), 4800 & 9600 V.32 (V.42/MNP5)
Number: (301)-625-9663 -- 1200 & 2400 (MNP5), 9600 & 19200 (PEP)
Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: XBBS (UNIX/Xenix Multiuser BBS)
IP Address: 44.60.128.1 {wb3ffv.ampr.org} [for FTP access on 145.650 mhz ONLY]
Misc. Info: Machine is an 80486 computer running UNIX V.3.2 and features 700 Meg of on-line storage. Most transfer protocols are available!!

I attempt to keep the latest and greatest HAM software on-line, and encourage all to upload anything new that they come up with, as it is of benefit to all. Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga

KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
WA7MBL BBS for the PC (Versions 3.31, 4.31 & 5.1[2,3,4])
W0RLI BBS for the PC (Versions 6.xx, 7.xx, 8.xx, 9.xx, 10.xx)
MSYS BBS for the PC running KISS TNC's (Version 1.09)
AA4RE BBS for the PC (Version 2.10)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK (Version 1.01)
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs
ARRL Newsletters & Gateway
W5YI Electronic Edition

There is much more available on the BBS, and I don't want to waste a lot of PACKET BBS space trying to list it all, so if you are interested give it a call and see for yourself !!!

If you are interested in using UUCP to connect to the BBS, this can also be done as I support Anon-uucp. The login to the system is 'uucpanon', and there is NO password. The listing of avalible archives are stored in a file called 'FILES', and it is located in the /usr/spool/uucppublic. To retrieve the files listing just use the following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic

This will move a copy of my files listing into your uucppublic directory. If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck...

H A P P Y H O L I D A Y S !!

I've recently been bit by satellite QSO's and have been working CW via RS-10 and have been following the DOVE telemetry. I would now like to proceed to full use of the Microsats. I have just sent for my AMSAT membership and am awaiting books, etc that are on order.

I currently own an HF rig, a 2mFM rig and a TNC. I understand that I need 70 cm recieving capability and a PSK modem to copy the downlink of the packet data. My questions related to this are:

1. Do you have any first-hand experience with the recieving converters that take 435 down to 10m? I have seen adds for Hamtronics but would appreciate any feedback on any you are aware of and/or have experience with. Obviously, my preference would be an all-mode UHF rig, but with the rest of the equipment I'm gonna have to buy, I'd like to get by for a little less for now and add that later.

2. I would also like information on PSK modems for use with the Microsats. I have seen Paccomm's PSK-1 modem (which also copies Oscar 13 400 baud telemetry). I have heard of the G3RUH (?) PSK modem but know nothing about it. What are the rest of you using?

3. I have read that the Paccomm PSK-1 modem will not work with the Kantronics KPC TNC's (which I have) so I will most likely be looking at replacing my TNC, too. I would like to upgrade to a unit that will support KISS mode, TCP/IP, WEFAX, etc. as well as interface with the PSK modem. I would like to go with a unit that has some future, too. I am considering the PK232 and KAM. Any others? Any suggestions on any of them? Benefits, features you look for?

4. It sounds like a regular FM rig will work for the uplink on 2m. I have a Kenwood TR7800 (25W). Any problems with this? What are you folks using? Do I need a 2m all-band rig?

Thanks for any input. I appreciate the collective feedback and common sense approach from anyone. Satellite communications is an exciting new mode for me and want to spend my $$ wisely!

Hello all,

I have tried to put one of my TNC-1's in KISS on HF...
The TNC works fine in 300 bps when in TARP-mode, but when I install a KISS
EPROM I can see everybody on the frequency, but nobody seems to understand
my transmissions. Could this be a problem similar to the ** HDLC can't init **
message I get when HBAUD is set to 300 bps in TAPR-mode, and a RESET is
done? Does anyone know of a version of KISS that will work on 300 bps?
Is anyone using a TNC-1 in KISS at 300 bps?

Have a good 1991!

Subject: PK232 RTTY signal out of 90 degree phase

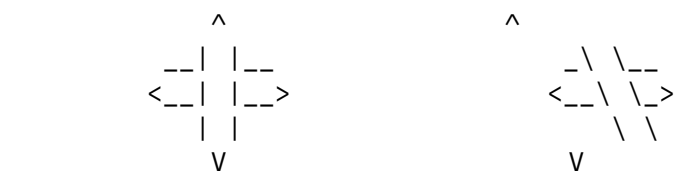
I measured the Mark/Space output of my PK232 in RTTY mode using
a scope and with the PK232 in loop back mode as described in the
PK232 manual (green and white wires connected on the Radio output
cable). I started transmitting using this setup in RTTY mode. The
characters typed were received OK but when I monitored the Mark/Space
scope output on the PK232, instead of the correct cross pattern on
the scope I got a signal slightly out of 90 degrees phase:



Correct Mark/Space RTTY signal pattern

Measured Mark/Space RTTY signal pattern

Does anyone know how to adjust the PK232 so that the Mark and
Space signals be correctly at 90 degrees off phase ?

In addition, can anyone e-mail me the description of the

modifications to the PK232 in order to minimise RFI pick-up.
Any other mods will be apreciated as well.

I built one of the Hamtronics converters. Getting the local oscillator
stablized so that it would start reliably and still get a clean waveform
was a bear. If I hadn't had a spectrum analyser handy, I would probably
have given up. It works ok now, however. I personally like the converters
from Advanced Receiver Research. They are stable, sensitive, and have
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

reasonable noise figures. The only problem I have had is with lightning induced surges blowing the gasfets.

I'm using the G3RUH design from Radiokit. The modem went together easily. It tuned up cleanly. And it works. I did have the advantage of a spectrum analyser, dual trace 200 Mhz scope, and a frequency counter to make it play, but these shouldn't be necessary. The Paccomm unit seems to be a solid unit, but I haven't had any personal experience with it.

I would recomend a simple straight TNC2 clone such as the MFJ1270B or the Paccomm Tiny 2. I have used both extensively to interface various modems, G3RUH, WA4DSY 56k, Kantronic 2400, etc. Running KISS is a simple ROM replacement. I wouldn't bother with the multimode wonder boxes. The compromises inherent in a do everything box mean that they do nothing particularly well. Also, the external modems we are talking about are specifically designed to interface with the TNC2 and tying them to one of the multimode boxes is not straight forward. You can do it with the PK232, I've installed them for friends, but it's not simple. You have to go inside and find the signals that you need, cut traces, and patch in your own wiring. With the TNC2, the modems connect cleanly to the external modem disconnect header.

> you folks using? Do I need a 2m all-band rig?

The main thing you may need is a "mode J" filter to keep the 2 meter signal and it's harmonics out of the converter. Spectrum International sells a nice one. You can build one fairly easily if you are handy with metalworking tools.

The FCC has proposed dropping the 5wpm Morse requirement for the Technical
class license. No-code techs would have all tech priviledges above 30MHz.
Old techs, and new techs who take and pass the 5wpm test, will retain all
current tech priviledges. As for date effective, I have heard early '91,
like Jan. or Feb, HOWEVER the ARRL is currently deciding whether to petition
the FCC to reconsider. The ARRL wants to make it (I think) 220MHz and up.

Do you have a problem with the ARRL's position on this? Let them know!!
I'm going to..

>If we do, where can I get tested in Southern NH?

Same place as always. It's a plain old Tech test, but written only..

This was posted instead of mailed, since there might be some other non-
readers of rec.ham-radio out there (I don't blame them at all) unaware
of the FCC decision. However, rec.ham-radio.packet is not the appropriate
place for discussion of this subject. Followups directed to rec.ham-radio

I believe this is inadequate if you wish to use omni's. If you want to save $100 over the cost of the PacComm PSK-1 and you wish good BER performance out of omni antennas, get the TAPR kit. TAPR is in Tuscon and I have forgotten the address and phone number. I probably should keep a copy of that here on my email machine at work, but I always manage to forget. If you are using omni's and have not compared results with a correctly tuned PSK modem from TAPR and/or PacComm (the paccomm is a licensed variant of the TAPR box), then I suggest you do so. The problem with the G3RUH is that it assumes a good SNR at all times. It is an all digital design and hard limits the signal as it comes into the box and then does a squaring loop demodulator. While the latter is theoretically equivalent to a Costas loop demod (as in the TAPR/PacComm), in practice it is almost never equivalent. Good lowpass filters are just inherently easier to do than bandpass of the same Q. Hard limiting is theoretically only 2.2 dB or so worse than not hard limiting. This is in the presence of white Gaussian noise. The noise out of most SSB radios is neither Gaussian or white. All taken together this leads to a 10 dB worse implementation loss of the G3RUH design over the TAPR. If you have not yet purchased a modem, and you do not yet have gain antennas, I strongly suggest that you consider another possibility and not use the G3RUH. If you have gain antennas already, there is so much link margin from these very loud satellites that the G3RUH is at no disadvantage except during the deepest fades and I would decide only on the basis of which is cheaper. On Gary's other comments concerning converters we are in complete agreement. Jan King and I have begun using discone with amazing results and I should be reporting on that soon enough.

Truth in advertising requires me to tell you that I get a royalty as one of the designers of the PacComm PSK-1. I am not sure but I believe the price of the kit from TAPR and the price of the kit

from Radiokit are comparable. On that basis, if I were going to do
a kit, I would do the one with the best performance but this is
from vague memory. I would check the current prices.

Gary and I are not talking about the G3RUH 9600 bps modem design which
is currently the best commericially available modem for 9600 and
is available from Kantronics and PacComm. I believe it is called the
NB-96. James has done a beautiful job on this. It is the only
commercially available full duplex 9600 bps direct FSK ham modem.

(Is that enough adjectives or what?)

I couldn't agree more. They are simple to construct and easy to tune.
One is especially desirable if you wish to try omni's. Do not expect to have
good luck with the omni's for at least a month. We just released the BBS on
the microsats and they are extremely oversubscribed. Gary and I contend
for the uplink at least twice a day! An omni station will work with the
microsats after the AO-13 boys and girls quit using 1 Kw eirp (or more).
I strongly believe that it takes more work to make an omni station work
but considerably less money. You simply must do everything right.
No desense from the 2 meter transmitter can be tolerated. A good preamp,
that doesn't collapse from proximity to the 2 meter transmitter is required.
Your deviation must be about 3 Khz. It is amazing to me out much better
the throughput is into the Microsats with 3 Khz deviation than you get
from 5 Khz. The filters are a little tight for the beginning and ending
of the orbit if you are not tuning your uplink to compensate for doppler.
The phase group delay at the edges is worse than we desired. Get away
from the edges and the filters are beautiful. The receivers in the Microsats
are especially sensitive to overdeviation. If you are digipeating through
the satellites, you can sometimes see two packets from you when you only
sent one. If this occurs very often, you are overdeviating. I run my
`mike gain' or modem output level at a setting so that when monitoring
my signal on another receiver, it sounds a little weak in audio. You will
not be weak at the satellite if you do this. Remember this is a carrier,
and you are modulating the frequency with Manchestered NRZI data.   In
a correctly designed FM tranmitter, there is little or not AM modulation.
Since I regularly load code to the spacecraft, I have a monster uplink,
which I cut back to 8 watts to my gain antenna when I am not loading code.
This works out to be about 100 W eirp. Even this is too much.
After I cut back the deviation, I have yet to see one of my packets doubled
or the spacecraft respond that it heard me on the wrong channel. (It does
this inside the response to bootloader commands).

Attention please!

I still have trouble getting stuff in past the folks who refuse to look
and listen to see if the bird is operating or being loaded.

>ROM replacement. I wouldn't bother with the multimode wonder boxes. The
>compromises inherent in a do everything box mean that they do nothing
>particularly well. Also, the external modems we are talking about are
>specifically designed to interface with the TNC2 and tying them to one

Most TNC's running later versions of the ROM have KISS built into them.
All one needs do is to say KISS ON. In some tnc's, this must be followed
by a restart. To get out of kiss mode, a special command string must be
sent to the TNC (KISS command 255) which will return the box to regular
operation.

As for `do all boxes' being comprimises, with the PK-232 you are correct,
as well as MFJ 1278 and KAM. Let's consider the PK-232 since you mentioned.
it. The use of 200 Hz shift on baudot is an example and the noise performance
of the Baudot demod suffers from the use of the BEL-103 receiver
filters in a filter / slicer discriminator. Hooking up the external
modems to this is a real pain as well. However, with the new DSP style
`do all boxes' I can assure this is an incorrect statement. The baudot
modem I just finished for the DSP-2232/1232 outperforms any I have
tried and the PSK modem for PACSAT is second to none. The AO-13 demod
copies reliably through spin mod fades and I use it daily to talk AMTOR
and to UO-14 using the G3RUH 9600 bps modem. All are within 0.1 dB of
theoretical performance. The day of the do all boxes being comprimises
are almost over. There are things these units cannot, and will not
do. 56 Kbps is completely out of their range at this time. The analog
front ends, made up of programmable filters, are incapable of being
tuned up to running with a 100 Khz bandwidth signal. Indeed, the
A/D's will not run faster than 100 Khz. TAPR/AMSAT has finished its
design and I have a Beta board to port the modems I have done for
the TMS320C10 board we began all this with to that board. Lyle wants
this out the door now. So do I, if for no other reason than to stop
people from wasting their money because of fancy ads for vaporware. If
you want a cheaper alternative to the AEA box, and will settle for slightly
less capable hardware and/or you want it to plug it into your PC, wait
a little while for the TAPR/AMSAT board. If you want the do all multimode
then the AEA is the current best bet. Don't ask me for shipping dates.
Call AEA and TAPR.

Gary's advice in all other respects is good and he is a very active
user of the birds (I get to see the log files ;-).

Dave:

I have in use daily the AEA DSP-2232 running a UO-14 modem.

A UO-14 modem is 9600 bps direct FSK. What that really means is that
you put shaped data on the modulator of in a true FM radio. You take
the data for receive directly from the discriminator in your FM receiver.
Since you do not wish to have much in the way of a DC bias in the bits
to be received or transmitted, the data is sent through a circuit
called a scrambler. This is not in use as an encryption device,
since their is no cryptovariable, and since it is self synchronizing.

There are several ways to go. The cheapest is to buy one of the many
variants of the G3RUH 9600 bps FSK modem. It is the best commercial
modem available to do this job. Both Kantronics and PacComm have
variants of it. The other is to wait for the DSP boxes to be released
as they will do this and more. I have a G3RUH (which I loaned to
someone else) and have not had a chance to use it on the satellite.
Others that are on the satellite are almost exclusively using the
G3RUH.

The uplink for UO-14 is 145.970 and the downlink is 435.075, please
compensate for doppler. You should be able to copy this extremely
loud signal with omni and your FM receiver (if it can tune 435.075).
You will see the S meter rise and the noise get quieter. What I mean
by this is that 9600 scrambled data sounds like `quiet FM noise' is
the best way I can describe it.

Did I help?

Bob

TCP/IP packet radio can provide almost everything the "traditional"
AX.25 service can. We now have NNTP going with NOS; UNIX systems
speaking TCP/IP can offer various multi-user chat programs (like
CONVERS node); and NOS is now successfully stepping on the toes of the
PAU's by mimicing the traditional store & forward BBS..

.. however, there is one service that we don't have yet, namely the DX
Cluster - or similar - for TCP/IP. I've been thinking about a simple
service where the user connects a certain telnet port for the goodies.
Maybe a simple server-client -relationship, even? In a small scale,
this seems to be sufficient. Yet it would be a great advantage if this
program could talk with the existing DX Clusters and exchange
information.

So, is the description of the protocol available in public domain?

Does someone have spare documentation of the Cluster system so we
could have some idea of the desired features?

On December 13th, the FCC modified the requirements for the Technician Class license by dropping the code test. This bold move offers great hope to all of us who are deeply concerned with the possibility that amateur radio will one day soon be crushed under the weight of the spectrum needs of other services.

I was disturbed to note, however, that you were reported to be considering asking the FCC to reconsider this action to the extent of confining the new codeless Technicians to 222 mhz and up. I consider this most unwise for the following reasons:

One basic Technician Class license with one written exam + a CW endorsement for those who want to operate on HF would be easier and cheaper for the FCC to administer.

"Ghetto-izing" the codefree Technician Class licensees provides no regulatory or technological benefit. Rather, it serves only to codify social discrimination by preventing the newcomers from coming into contact with the majority of their fellow amateur operators.

Amateur radio constitutes the United States' first National Park of the Mind, and broad, open access to that public resource will provide intellectually stimulating and spiritually refreshing benefits to the nation

that narrow, inhibitory access by the privileged few cannot. I believe that that is the basic reason the FCC made its decision.

Amateur radio's greatest contributions to the state of the art occurred during the period of its early history when it was not straight-jacketed by complex regulations and licensing structures not based on compelling need. Preventing or inhibiting the freest possible exploration of the National Park of the Mind consistent with conserving its meaningful existence would tend toward reducing it to the site for historical tableaux similar to those re-enactments of medieval jousting.

There is no compelling need for creating your proposed codefree ghetto. Therefore, any request for reconsideration will doubtlessly be rejected out of hand. The only result of a Petition for Reconsideration will be to make the League look foolish.

Moreover, since the new codefree amateurs are going to revitalize the future of ham radio, resentment against the organization that attempted to cause part of the original promise to be withdrawn would no doubt result in very few of them joining the League, which would very likely become little more than the custodians for its Antique Wireless Museum.

To summarize, it's a dumb idea.

Gak. There's a very good reason this hasn't been done. No, it's not
because I'm not a DXer.

The DX Cluster program is an outrageous abuse of the AX.25 protocol,
pure and simple. Connected-mode AX.25 (and TCP) are protocols
specifically intended for point-to-point communications. It is a
scandalous waste of spectrum to use them to implement a broadcast
function over a broadcast channel by sending N copies of the same
information to N different destination stations when they all could
have easily shared a single undirected transmission.

As soon as somebody designs and writes a DX Cluster program that uses
a reasonable protocol specifically designed for broadcasting, I would
be happy to add it to NOS. The NK6K/K8KA Pacsat Broadcast Protocol is
probably a good place to start. I would enhance their protocol by
adding some parity packets (probably using a Reed-Solomon code) so
that a few missing data packets could be reconstructed by the receiver
without requiring the brute-force repetition of every data packet by
the transmitter.

Phil

I had in mind something like a simple 'dx server' to my U*IX machine
(hopefully soon to be connected with the packet network), where the
user (client?) connects by 'telnet mymachine somenumber' and then uses
the connection to acquire desired dx information. Wasteful or not -
but there is a great need for this kind of service. Some of the local
guys have been talking about putting up a cluster - I just hate to
hear them say 'A-ha! your fancy tcp/ip can't do it!' ;-)

The idea of being able to talk with the regular clusters around would
add for its usefulness greatly. I might even use it myself (now who
said anything of packet people not being dx-hearted? ;-)...

The need for a roundtable chat program gets a similar solution as soon
as I can get the machine connected. Fortunately, there are several
around already.

> a reasonable protocol specifically designed for broadcasting, I would

Sounds like something not for the 'appliance computer geeks' like
myself. I can hardly picture myself trying to hack together a
reasonably working dx database - establishing or modifying a Real
Protocol is a little bit out of my hands at the moment. Could be
interesting though - maybe even credited in my studies, who knows..

Oh, almost forgot.. how'about the transverter we were talking some
time ago? Is it still lying around? Found out about the postage?

Happy new year,

     Luru

Hi!
Is there any Software for Packet-Radio running under Windows (I know every
DOS-Application can run under Windows, but this is not what I am looking for).

Please tell me where I can ftp it from.

You're absolutely right...this is a "good thing" ...etc, etc, etc.
However, many, many users of the DX clusters are not on a "broadcast"
channel with the cluster. They are frequently one, two, or even three
Netrom or digipeater (shudder) hops away. The realities of level 1
connectivity in most places outside the most concentrated urban jungles
necessitates named routes for users. Several users may lie along a
particular route, but there still must be at least one ARQ node terminating
each route for the "broadcast" to be sucessful on our lossey networks.
Do we need better level 1? Sure. Are we likely to get a true CSMA/CD
enviornment, given terrain, our physical seperation, and finances?
No. So perhaps we should be thinking of protocols that maximize the
effectiveness of our real networks rather than trying to force fit
protocols onto a level 1 map that doesn't offer all the features we'd
like. I know that this is heresy, but ham radio networks are different
than ethernet and are unlikely to ever be like ethernet except in very
special cases. I don't know what that wonder protocol looks like, but
the sparse nature of our networks and their poor thruput indicate to
me that the protocol won't look anything like a wireline "broadcast"
protocol.

Even dumber now Jim. Please see the latest ARRL bulletins. The FCC gave them no time to react. It is a fait accompli. The commission ordered it into effect on February 14. No appeals allowed. If the ARRL wants to waste money on another lawsuit, possibly they can do something. It is really time to put this decision into our pipe and smoke it. It can be a success or failure or simply a ripple into amateur radio's not so long decent into senility. We have been given a recruiting tool. I suggest that we go out and make use of it. If you do not like the nocode tech, then recruit your people from those to whom learning the code is not a deterrent into getting into amateur radio. It seems that Jim and I (and many others) have found potentially valuable recruits for whom the morse code requirement was sufficiently daunting to force refusal of amateur radio as a hobby. We must make amateur radio relevant to the 21-st century US citizens now, or there will not be such a hobby then. (I only talk about relevance to US citizens since this is an FCC action and not a UN one ;-).

Sorry if I flamed a little, but this whole issue really hits my hot button.
I get very frustrated when I see amateurs wasting precious spectrum. When I
suggest that there might be a more efficient way to do something, many hams
immediately take offense, protesting either that they aren't PhDs in EE or
computer science or that they don't have the million dollars they presume is
necessary to do the job right.

I don't have a PhD or a million dollars either, but that doesn't seem to get
past the cries of "elitist! elitist!"

Anyway, my point is that we hams had better start treating our spectrum with
some more respect if we're to save it from reallocation to commercial
interests who are used to investing BILLIONS (not just millions) of dollars
to shave a MHz or two off their RF requirements. There's no reason we
amateurs have to spend that kind of money, especially since we're SO far
down on the efficiency curve that some major gains could be had with very
simple and inexpensive techniques (like the use of a packet protocol
specifically designed for multicasting).

I always thought that radio amateurs were supposed to pride themselves on
being able to replace "brawn" (i.e., money) with brains (i.e., clever and
resourceful solutions to a problem.) This should be especially true in the
age of software, where one or two people can create something that can

easily be replicated and used by thousands of others.

Unfortunately, all too many amateurs seem willing to squander precious spectrum to cover a lack of both brains and money. This results in "pissing contests" like the one between AMSAT and W6GO over the use of 144.95 MHz for the SAREX packet uplink (in my opinion, the SAREX "packet contest protocol" and especially the W6GO "DX packet cluster" are BOTH egregious misuses of the AX.25 protocol for things it was never designed to do.) And then when somebody does come along who wants to try something new, he's told that all of the spectrum is already in use - by the old, inefficient systems, of course. Grrrr!

Luru, please don't take these comments personally; I know you only meant well in trying to make NOS more useful to the general amateur population. But I think we implementers have a duty to resist demands for inefficient services, especially when there are much more efficient ways to provide the same thing (even if they're not backwards compatible).

Gary,

This still doesn't preclude doing it much more efficiently than now. You simply build logical spanning trees out of the links you do have, and then you use controlled flooding (a la USENET) to send exactly one copy of each data packet across each link.

A better way to handle this problem would be to build a parallel "broadcast"

packet network alongside the point-to-point packet networks now in use. A channel would be reserved in each area for broadcast services, and the best available site in the area would be chosen for the transmitter. (This differs from the point-to-point network, where overall spectral efficiency is maximized by a cellular design with the smallest practical cell sizes).

Users would submit packets to the broadcast transmitter by means of the regular point-to-point network. There would be no user sharing of the broadcast channels - this is important to get the packet loss rate down to where a packet-level FEC algorithm can provide almost perfect reception, minimizing the time spent on repeats.

This system would not be limited to DX cluster type announcements - there's an even more urgent need to distribute bulletins and "ALL@ALL" BBS messages this way.

Goodbye. Philips is having layoffs, and they did it at my site. Only reason that I haven't got told officially yet is that I'm out sick on disability (eye trouble). But several reliable sources tell me that I'm to be canned when I return to work (Jan 2). My normal remote dial-up computer access code no longer works, I'm using a friend's code, at his house. Don't think they can tell whose.

The kind of work I did is television R&D, including HDTV (high defination TV, regular NTSC television, developing patents (I have 11) in this field. Also have done DSP, & high speed digital logic design, up to 114MHz clock speeds. I posted my resume on misc.jobs.resumes Or call me up and I'll mail anyone interested a copy of it, and a list of my patents. Will consider anywhere in USA. Corporations, and colleges (someone at a college called me about 2 weeks ago, call again).
Also give my name and number to any and all headhunters.

Robert Casey   Amateur radio WA2ISE
855 Oradell Ave   Amateur radio packet: WA2ISE@KD6TH
Oradell, NJ 07649
201-261-4066

Don't try to use e-mail, as Philips is going to delete my computer account the day I get officially canned. I don't expect to be able to log on again.

This is the dark side of American life. But getting layed off is better than getting killed in or near Tianamen Square.

See, I'm not so dumb. :-) I thought a little prodding would get the
creative juices flowing. Unfortunately we are already using a cell
size with a radius of 30 miles due to a scattered user population.
With our terrain this is hidden terminal city. We have neither the
sites nor user support to shrink our cells. We do have a sort of
parallel trunking arrangement, but it is strictly point to point,
high site to high site. I think that a prearranged system with
a permanently connected termination on each route that can supply
ACKs to insure that a copy of the message makes it through the network,
could allow many of our users to passively monitor the broadcasts and
relieve much of the load placed on the system by things like the
packet cluster. It seems that a practical first step would be to
design a listener program that could piece together messages from
monitored packets. Perhaps bulletins could use a line numbering
scheme to facilitate this (I overheard this suggestion at Dayton
by N4HY). Ideally, if a new protocol were implemented with FEC
then one ACK per message by the terminator would suffice with the added
possiblility of NAKing individual frames found uncorrectable by the FEC.
Of course we need to figure a way to stop the ACKs and NAKs from
getting clobbered or it's all for naught. This is where the ideal
separate network for broadcasts would be nice.

As quoted from <9101010624.AA10393@hermes.intel.com> by rharel@fab8.intel.com

(CAL-LAB (MS:JER2-85 TEL:7589)):
+---------------
| I'm trying to get our BBS to Forward mail to my personal mailbox.
| The BBS is running MBL 5.14 software and I'm using an AEA PK-232MBX.
| I added the following lines to the forwarding file (which at the moment just
| forwards and reverse forwards with other BBS's)
+---------------

You have to arrange for the PK232 to send a "host ID" (I believe that's the right term) when it connects. You know that when you connect to a BBS, the first thing it sends looks like "[XXX-V.VV-H$]"? That's the host ID. The XXX and V.VV are pretty much irrelevant but should identify the software you're using (in this case, something like "PK232-v.vv" where v.vv is the rev level on the PK232 firmware); the H indicates hierarchical forwarding and should *not* be sent by a PK232 or other personal mailbox; the $ indicates bulletin handling. Since my PK88 supports bulletin handling, the PK232 should.

You need to set your MTEXT or something similar to send as the first line:

[PK232-v.vv-$]

This will tell the BBS that it's talking to something that supports forwarding. After this, the BBS will send its own host ID, which should switch the PK232 mailbox into a special mode indicated by its issuing a simple ">" prompt. (If it doesn't, your PK232 rev level doesn't support forwarding/reverse forwarding.) After that, the BBS will send SP commands to send individual messages, then send "F>". The F> switches roles; if the PK232 is set to reverse forward messages and it has any to send, it will issue SP commands --- otherwise, it disconnects.

NB: This is what I've observed. I'm still a bit hazy on MBL/RLI mail forwarding. Anyone want to post a full description?

In any case, the host ID in [] is REQUIRED.

++Brandon

Hi. Has anyone considered using alternatives to the usual modes of
modulation for packet? All the existing packet systems seem to use
modems that were designed for telephone-line service; this is not
necessarily the best way, particularly on HF. There *are* better
modulation systems (I am thinking here of the PICCOLO system that
was developed in the 'sixties; used multiple tones, and achieved a
very great resilience against noise; i remember seeing one of these
things generating 100%% error-free RTTY over a HF link on which i could
not even tell that there was a signal.....)
OK its not the fastest (or it wasnt when i saw it, but that *WAS* 15
years ago, and the terminal unit was a rack full of L-C filters)
With modern LSI modems things would be more compact. I am told that
Racal made some Piccolo modems for the commercial market. Anyone
know anything about these??

Seems to me that the sensible way to do a broadcast protocol would be some sort of polling mechanism; Possibly like this:

Stations wanting to enter the 'broadcast list' send a frame to the broadcasting node - this frame contains callsign and the 'broadcast list' the new station wishes to enter.

Broadcasting node adds callsign of new station to its list, and allocates new station a polling address. It transmits this polling address to the new station as an acknowledgement that the new station has entered the list.

When broadcasting station transmits, it sends the information in much the same way as NETROM 'NODES' broadcasts.

Broadcasting node then issues short 'poll' frames to each of the stations in its list; these reply with an acknowledge that they heard the broadcast. If a station does not hear the initial broadcast, the broadcast is repeated (and of course everybody will hear it, so the number of subsequent stations that failed to hear it will be less....)

Stations not responding to some set number of polls will be dropped from the broadcast-station's list.

Stations wishing to send data to the broadcast node must wait till they are polled. So you may have to wait for a slot.

A protocol based on this was written by me some years ago, to allow unused PCs on a network to receive status broadcasts from a central server; it also allowed any unused PC to be used to send brief messages to our support staff from terminal rooms etc. Admittedly, I wrote most of it in BASIC so fast it was not, but it worked!

Does anyone have experience with using the 9600 baud modems sold by
PACCOMM, Hamtronics or Kantronics?? What types of radios work with them??
Are all the 9600 baud systems compatable??

I have finally got some TCPIP activity going and the first thing everyone
agrees on, is the need for higher baud rates than 1200. I plan on keeping
a 1200 baud channel as an introduction to get other people interested,
but I want to move the bulk to higher speed. I think 9600 baud is it
for at least a little while.

Can anyone offer any info??

I have just set up a packet station based on a Mac SE/30, PK-232 and
an IC-24AT HT. I have read in various places that an HT would be
sufficient for packet. (I now think that this is only true if no one
else is using the same digipeater that I am since I don't have a very
strong signal)

My problem is that the TNC generates a lot of noise. (Whereas the
Macintosh generates almost none) The noise pins the HT's S-meter
on most frequencies. OK, I know the HT is prone to intermod problems,
but if a 2 MIP computer running at 16 Mhz doesn't cause problems,
shouldn't I expect to not have problems with a TNC that is supposed to
run in an RF environment?

OK so now I walk up to the attic with the HT and still receive some

noise. I imagine with a gain antenna on the roof, it will again be
worse. Unfortunately after the fact, I checked the noise generated by
a KAM and it was significantly less.

Question : Does anybody else use the PK232 with an HT? Do you have
noise problems? Do you have any other ideas for solutions? Is my only
solution to buy another radio and antenna? Or should I switch to a
KAM?

Thanks in advance for your help,
Tom

Really? The PSK-1 is a licensed copy of the TAPR modem, which in turn
was a direct copy of a Japanese design (with some tweaking by W3IWI & co.).
Where do the royalties come in?

Phil, I agree that both the SAREX experiment and the packetcluster nodes
are different than the typical AX.25 uses. They also were not even
around when the AX.25 protocol was developed. However, I do not see them

as squandering precious resources. Rather, they are the first step in developing NEW SYSTEMS. Should uses such as the packetcluster wait until an optimum protocol IS developed, or should hams, in typical ham fashion, go ahead, working on a shoe-string budget, use existing software and hardware (tncs, etc.) and dream up and implement new systems WITHOUT HAVING TO WRITE ALL NEW SOFTWARE AND BUY NEW HARDWARE. I agree that the AX.25 protocol is best suited for point-to-point communications, but it is also quite suitable for handling long distance dx packetcluster activity. Here in Florida, we have a packetcluster system that links Melrose (Gainesville/Jacksonville), Apopka (Orlando), Melbourne (the spacecoast), and Boca Raton (Miami). So the whole state is essentially linked from North to South. The existing AX.25 protocol WORKS. Not optimally, of course, but it WORKS TODAY. Each node has its own local users, and some chatting between adjacent nodes does occur. But over the whole network, the only thing that is shared is really just DX spots. High numbers of users regularly go over 30 for the network, and weekends see numbers over 50. I personally found very little use for old-style typical packet BBS'es, but find the packetcluster activity much more interesting. (Of course, I am primarily a DXer :-) But I do not see the point of flaming systems that, although not optimal, do fulfill a need today in Ham Radio. If we waited for optimal systems, then there would never be any development of better systems! As for newer systems, they can be developed. And they certainly can force the demise of certain communications modes, although not overnight (consider the case for AM versus SSB). It was unfortunate that SAREX chose the same frequency for the space shuttle experiment due to congestion. However, one of the local 'Big Gun' dxers did give me a call, knowing that I was active on RS10/11, wanting information on how to work the shuttle. So perhaps the choice of frequency did some good afterall! All in all, it seems that people forget that Ham Radio is not one hobby, but is really a whole set of similar hobbies wrapped up in one package. I will celebrate my 20th year as a ham this year, and I am still interested in new activities in ham radio. And no, I do not call any activity having to do with ham radio technology a 'waste of resources'. Now some of the behavior, such as occurs on 20m SSB, is a waste of resources :-)

Happy New Year! 73, Gary

The idea of embedding ham callsigns in Ethernet is silly.

Ethernet is a subnet technology which uses 48-bit addresses that
guarantee uniqueness, IF taken from the globally-administered
blocks and used correctly. It is a "dense" coding, though,
with successive values assigned. So are callsigns, but only mod-26.
And callsigns are assigned quite differently.

Better to simply use an appropriate technology. Ethernet per se
won't work on radio too well because it's very hard to get true
CSMA/CD, and even if you do, you have to keep alpha below 1
(ratio of propagation delay to minimum packet duration) for the
CD to work.

If it turns out that "true Ethernet" chips can be slowed down and
used on radio, better to use "local" Ethernet space IDs with
some funny local value, and encapsulate the real ham calls inside the
frames in the next level (variable-length) header. Better yet,
use a protocol designed for radio. Ethernet was inspired by radio
(I know one of the inventors and he's a ham) but it's a very different
beast in practice.

BTW, if you really want to embed callsigns in a "real" protocol,
look at OSI network layer addresses. They're variable length, and
it's quite easy to embed anything within them. But that's another
discussion.

I am interested in using my aea pkt1 with ka9q's tcp/ip. I would like to

know any information on the roms used for kiss with the pkt1. I in addition

would like any other info necessary to use this tnc with kiss and tcp/ip.

Are any hardware mods necessary to do this? Any additional information would

be appreciated.

>Tom

The PK232 is a horrible noise generator alright. There are simple steps
that you can take to solve the problems however. The first thing you
must do is disassemble the case and sand the paint from all mating
surfaces. Achieving a good case bond will remove a lot of the hash.
Use star washers under all screws. The second step is to use toroidal
cores on all cables entering and leaving the unit. Be sure you are using
shielded cables for all leads. The third step requires the liberal
sprinkling of bypass capacitors on the circuit board. AEA has a bulletin
describing where to add the capacitors.

Even with all this, however, you may still experience problems with
the HT. The basic problem here is that the rubber ducky antenna on
the HT will couple RF back into the audio and PTT leads. This can

cause all kinds of bizzarre problems. The solution to this problem
is also simple. Don't use a rubber ducky. Always use an external
antenna, preferably an outside antenna mounted high and in the clear.

These problems are not unique to the PK232 and most users trying to
use a TNC with a HT will suffer at least some of these problems.
The absolute quietest TNC as it comes from the factory is the MFJ
1270B. Their cheap little tin box is a rather effective shield.
You still need to use shielded cables and it's still best to use
an external antenna on your HT. Try not to use too high a gain
antenna, however, as HTs *are* prone to overloading and intermod.

That is not true.

It includes a modification of the TAPR PSK modem for which a license
has been granted. The legal details have been worked out between TAPR
and the Japanese ages ago. There was some quid pro quo of you take
our design, tweak it as you will, and give us copies, artwork, etc.
In return, you can market it as you see fit and license it to whomever you
please. The intellectual property that myself, KA2MOV, and KB2CST have
in it are a 68HC11 design, a redone analog front end, including an AGC,
and a major code effort to do some DSP in the 68HC11. We do integrate
and dumps in the 68HC11 of the analog signal. It is a 2 dB win over
the hard limiting design of the TAPR original without the AGC.
The AGC is a big win in its use for copying AO-13. Yes, AO13. One
of the modes for the modem is to change loop constants, and to run a
clock recovery for the manchester data coming from AO-13. This is
sent out in a format compatible with P3C.EXE, which is available
from AMSAT-VK and PROJECT OSCAR. The royalties come in because
we put it in a form that was commercially useful, made major enchancements
to it, and for less than the cost of a TAPR PSK kit plus G3RUH
AO-13 demod you get both, assembled and sometimes tested by PacComm ;-(.

According to several who use it, it outperforms even the infamous
AFDEM in copying AO13 and its weak signal performance on PSK is quite
good. Both the TAPR royalies ($2 per) and mine are a joke, we did it
to get it into the amateur radio community in a commercial package.
If Gwyn sells 1000 (not there yet), we will have our investment paid
off.

I don't know why I feel defensive about this, but I guess I didn't
care for the `tone' of your question.

I am doing this at this time for AEA and their upcoming DSP box.
As you might imagine, since this is not intended for a target radio,
it must have some careful thought go into. It must work reliably
with many different radios, each with different response. Your rack
of LC filters had to have been very carefully designed for it to
achieve the performance you have observed. The same is true in
DSP. I have been working on 3 different designs for 6 months on
and off but with my recent retirement from Microsat operations, I
have returned to it full time. Tom CLark, W3IWI and I are running
experiments using the intended hardware. Ray Pettit (whose call
I can never remember) has written two or three articles about
a DSP based, extremely slow system, which is a real `mudder'
as WA3ZIA calls it. It really digs into the mud. I hope to get
this performace out of a system that runs a little faster than
we currently use for packet (300 bps). More on this will follows
later as I have more results in. Frankly, I have been spending
a lot of time making all the PK-232 equivalent modems outperform
the PK-232. This will continue for the next 3 weeks or so and then
it is back to strictly new development.

You missed my message about this on packet 3 weeks ago. ;-)

Wrap the cable from the TNC to the HT around a ferrite RFI line filter,
close to the TNC. It worked with my MFJ-1278, and I've had reports that it
cleans up PK232's as well.

On the other hand, I don't get QRM from my 1278 when the radio is
disconnected. Contact AEA --- your PK232 may have something wrong with it.

There are at least two variants of the KISS EPROM for the TNC-1. One wants
you to set the NVRAM baud rate parameter using a normal TNC-1 EPROM, and then
it uses the same parameter. The other, by PA0GRI, hard-codes the baudrate as
a constant near the front of the EPROM. If you have the first, I'm not sure
I remember the process well enough to help. If you have the second, then you
are likely trying to send frames at 1200 baud.

As far as I know, Picolo is used for traffic of some french embassies.
The Dutch "Code-3" Box does decode this (optional $$$). There are only
few frequencies in use with this system..

I have heard that the current DSP chips can detect extremely narrow signals.
Assuming this, why would it not be possible to make a packet modem that
used a standard voice radio, but got greater thruput by sending more bits
at one time (ie. not synchronous or asynchronous.)

The concept I have in mind is a modem where the transmit side sends 9
discrete tones spaced 100 hz apart. 8 tones are data bits and the 9th
tone is data strobe. (A lot like the parallel port on a PC.) I would

expect that keeping this 1Khz audio signal within the passband of a voice reciever would not be dificult, the only real problem would be detecting it on receive. This is where I think a DSP system would be ideal.

Am I completely off track? Is there some other reason why this wouldn't work? Where does Shannon come into play here? If it is possble, where does one find a source for things like DSP chipsets if one wants to learn by doing?

I hope you'll forgive what may seem like extreme;y stupid questions to you, but I am completely new to even READING about HAM-oriented stuff. It is fascinating to me. I work as a researcher in the communications field (Broad band network/Fiber). My best friend and I have recently been talking about things that we'd read/heard about packet-radio. I'm still fuzzy on what it can/cannot do. Who can do it. How much would it cost to get a moderate setup. ...stuff like that.... I know that we have a packet-radio reachable setup here where I work.... I suppose I could go bug them too :). If ANYONE would be willing give me quicky overview, so I can tell where to go to get my feet wet, I'd be most thankful.

Hoping I made even a BIT of sense...

A recent article with this subject mentions the PK-232 and new AEA DSP product.
I just purchased a PK-232 (as an alternative to the M7000) and was
not aware of the forecoming DSP products. I also wanted to keep the
system at a reasonable cost. I have a couple of questions:

- Is there a way to Better the PK-232. Specially in RTTY
  with the 170/200 Hz filter problem. I would like to keep
  the ability to have 200Hz filters for packet. May be
  some tuning, a switched capacitor/resistor or altogether
  a better external modem ...

- The AEA DSP being out of my financial range (for now) do
  you know of a product (kit/circuit design/commercial) that
  could allow me to do DSP on my laptop (no slot inside).
  An A/D converter between the audio and the RS-232 of the
  PC may be enough. I would write the softwar including
  FFTs. I wrote software for an EEG on the PC. Displaying
  brain waves or radio waves should be pretty close in
  theory (program wise that is).

- You mention good results using discone antennas. I am
  curious. I have an ICOM R7000 and a discone, the local
  satellite shop told me NO WAY, I think they are just

trying to sell me their equipment. What is your
opinion concerning whether or not I can get satellites
with my equipment.

Sorry if the tone struck you wrong (that's a problem with this medium!),
but this really was meant to be an 'inquiring minds' kind of question,
and not a flame of any sort. I admit to never having peered under the
hood of a PSK-1, and therefore rashly assuming that it was more or less
a direct copy of the TAPR modem (a la TNC-2 clone). This assumption was
evidently off-base, and I thank you for clarifying the issue.

Having homebrewed a PSK modem from the original Japanese design, I can
attest that it is an excellent performer, even without the value-added
goodies that came later. In the early days of FO-12 mode JD, it ran rings
around the other folks, who were all using G3RUH modems.

Barry

them
|> as squandering precious resources.

Gary,

It all depends on the area. If the population density is low enough so
that everyone's spectrum needs are satisified even when inefficient
protocols are used, then there's no problem. But we're seeing
increasing friction between contending uses for the spectrum that
could have been avoided had more efficient methods been used. The
SAREX/W6GO conflict is a good example of this. The 2m packet segment
could carry far more traffic than it does now, but because of the
inefficient modulation, channel access methods and protocols in use,
the segment is "full" in most areas and there's little if any room to
try something new, even if it's more efficient.

By way of analogy, you could say that gas guzzler cars and coal-fired
power plants "work today" but that doesn't mean there is no need to
develop anything new. Sooner or later we'll pay the price.

Phil

Lines: 41

I've been approached by a group of mathematicians at the Georgian
Acadamy of Sciences at Tbilisi, Georgian SSR (in the Soviet Union),
who would like an email link to mathematicians in the West.

As you may know, the phone system in the Soviet Union is unreliable at
best. You place a long distance call by calling the operator,
requesting a call, and then hoping that the operator will call you

back in a couple days to tell you your call is ready. This is hardly
a workable system for automated polling :-).

I heard recently that there is at least one satelite which handles
packet radio, but I've been able to find out little more. Packet
radio sounds like the way to go, but don't know quite where to start.

If there's interest I'd be happy to post a summary of responses.

1) What's the bare minimum of hardware and software necessary to send
electronic mail via satelite packet radio?

2) How do I find out about Soviet radio licensing laws?

3) Is there a packet radio satelite which covers Georgia?

4) Does anybody know of any organizations likely to fund such a project?

5) Would they'd need to find somebody in Europe willing to forward
messages onto either UseNet or the Internet for them? Any suggestions
on how I might find somebody willing to do this? Or could I do that
here in the States?

Thanks.

Bob:
     I appreciate the feedback you have provided and the insight you have
     given in regards to the design and improvements to the original
     TAPR design.

     Open discussions like this are, I feel, invaluable in helping
     understand and sort out the technical tradeoffs for products like
     this. As one of the design engineers, your comments and feedback
     have been very valuable to me in deciding which way to go.

     Thanks for ALL of the information yo have shared!

I am interested in finding those who are interested in mobile packet radio
from an airplane in flight. Airplanes so equipped would be able to know the
position of other planes (interchange data) and send data to the ground
(perhaps through multiple hops).

For those who have talked to me before... please reply so I know you are
still interested.

Thanks,
Joel Breazeale

Wouldn't it be neat if we could get airline pilots to get codefree techs and
get their employeers to install ham gear on board. Think of those digis and
PBBS'es flying all around the country at 30,000 plus!!!

Many thanks to Keith Petersen for forwarding me La Monte's query! I don't
normally read this newsgroup anymore.

>I've been approached by a group of mathematicians at the Georgian
>Academy of Sciences at Tbilisi, Georgian SSR (in the Soviet Union),
>who would like an email link to mathematicians in the West.

I've been very interested in establishing an e-mail connection with the Steklov Institute of Math in Moscow (in fact, I donated them a modem). They have a very reasonable e-mail system now, so perhaps you and your Georgian friends would be interested in what we did.

>As you may know, the phone system in the Soviet Union is unreliable at
>best. You place a long distance call by calling the operator,
>requesting a call, and then hoping that the operator will call you
>back in a couple days to tell you your call is ready. This is hardly
>a workable system for automated polling :-).

There is already a UUCP network in the USSR called RELCOM. They have nodes in Moscow, Leningrad, Novosibisrsk, and several other cities. The system you describe applies to almost all calls to foreign countries. However RELCOM obtained a 'special permission' to dial Finland directly (w/o the operator). Their computer (at the Kurchatov Insitute of Atomic Energy) polls FUUG.FI every 30 minutes, and e-mail and news flows back and forth very well. There is now a .SU domain registered at SRI-NIC, and quite a few nodes! I'd be *very* surprised if it's impossible to place direct calls between Tbilisi and Moscow. I think your colleagues should contact RELCOM's head Dmitry Volodin at (Moscow) 231-2129 and talk about a possible connection; and you should send your colleagues' "coordinates" to him at <dvv@hq.demos.su> and ask him to contact them as well. This doesn't involve packet radio :), so perhaps I shouldn't be posting this to this newsgroup, but I felt there might be some interest... :) So:

>1) What's the bare minimum of hardware and software necessary to send
>electronic mail via satelite packet radio?

Don't know about that, but for a UUCP connection you're better off with a Unix or Xenix machine, but there is UUPC that runs quite well under MS-DOS. There are RELCOM sites that have UUPC under MS-DOS, and at least one Macintosh, I think. Modem: the USSR has *very* dirty phone lines, so forget about modems without error correction! Get something like 2400 bps with MNP 5. If you want to give them Usenet, get a Telebit T2500 (RELCOM has such beasts in Moscow to talk to, and has Usenet).

>4) Does anybody know of any organizations likely to fund such a project?

I tried to interest NSF, AMS, et al, in funding e-mail for MIAN... No interest. I paid my own funds for the modem, and I'm an indigent doctoral student.

>5) Would they'd need to find somebody in Europe willing to forward
>messages onto either UseNet or the Internet for them? Any suggestions
>on how I might find somebody willing to do this? Or could I do that
>here in the States?

They could, but they'd be better off getting a feed over a phone line from Moscow, it seems. :)

By the way, there's a mailing list (not a newsgroup) used to discuss the work on hooking up the USSR to the Internet. It's called SUEARN-L on LISTSERV@UBVM.CC.BUFFALO.EDU. Normally I'd be glad to help you get on it et al,

but I'm going away *right now* (this is, I hope, the last time I read my e-mail in some weeks :), so if you're not sure how to talk to a LISTSERV (by mail; it works if you read this :), or want old issues, please talk to Mike Meystel <MEYSTMA@DUVM.OCS.DREXEL.EDU>; I won't be around to answer any follow-up.

Mike WA8BXN keeps the current version of MSYS on the Cleveland HAMNET
BBS for downloading.

The phone numbers are (216) 942-7516   300-9600   (HST Modem)
                        or   942-6382   300-9600? (Hayes Modem)

A wide variety of protocols are available.

Current release is 1.09 (although 1.10 is in testing).

For further details, send me e-mail.

Fred Goldstein and Anders Klemets both ask how collision detection can
be done when a full-duplex RF repeater is used.

Fred says:

|> If the sending node had some kind of comparator for received-bits and
|> transmitted-bits, taking the turnaround delay into acount, then

|> CSMA/CD might be essentially possible.

This is what I had in mind. If you simply compare the incoming characters with those in the transmit buffer, then you can quickly detect a collision that keeps you from hearing your own data through the repeater. You can also use framing errors (aborts, premature flags, etc) as an indication that you have not captured the repeater.

I don't think this is a particularly difficult scheme. You do have to handle the monitored data in software (unless somebody has a controller that can do a "receive verify" operation in hardware) but at least the transmitter can be DMA-driven.

Phil

I just got an AEA-232 MBX which I intend to use with my Kenwood TS-130S transceiver. I wonder if anyone out there has used this combination before, and if any OM/YL has suggestions or advice regarding interfacing or T/R-switching. I'm not sure if the T/R-relays are fast enough for packet or AMTOR.

Posted: Tue Dec 11 11:44:15 1990
Nntp-Posting-Host: thesis1.hsch.utexas.edu
Originator: jmaynard@thesis1.hsch.utexas.edu

There has been much discussion on this subject, and what started out
as a simple call for a new group has mushroomed into a complete
reorganization of the rec.ham-radio.* hierarchy. This posting reflects
my understanding of the current consensus of opinion on the subject,
and is intended to serve as the basis for further discussion. I
gratefully acknowledge the help of many folks around the net,
especially Paul Flaherty, who suggested the original reorganization
from which this grew; he and I have discussed this posting, and it
carries his approval.

THE CURRENT PROPOSAL:
=====================
The following groups are to be renamed:
rec.ham-radio   => rec.radio.amateur[.misc]
rec.ham-radio.packet => rec.radio.amateur.packet
rec.ham-radio.swap   => rec.radio.swap
Groups will be renamed by creating the replacement group, asking site
admins to alias the old group to the new one, and rmgrouping the old
group after traffic in it has died down. This method has been shown to
work in other hierarchies.

The following groups are to be created:
rec.radio.amateur.legal
This group is intended to contain any and all discussion about legal
issues pertaining to amateur radio, including, but not limited to,
rules, regulations, laws, and legal actions by and against amateur
radio operators. This group is to be unmoderated.

rec.radio.cb
This group is intended to contain discussions related to Citizens'
Band radio. This group will be unmoderated.

RATIONALE:
==========

1. Why move the groups at all? The primary motivation is to make it easier for interested people to find newsgroups related to ham radio. The rec.radio hierarchy was created after rec.ham-radio (net.ham-radio before the Great Renaming). It is an inconsistency in the namespace to have groups for similar purposes separated from each other, and that makes it harder for new users to find the desired groups. Further, this allows a change from ham radio to amateur radio (see next topic).

2. Why .amateur instead of .ham? It has been pointed out in discussion that "ham radio" is primarily an American term, and carries little meaning outside the US. In addition, there are negative connotations attached to "ham" that don't apply to "amateur". Some confusion also exists in the public mind about just what a "ham radio operator" is, as evidenced by the occasional "ham operator jams aircraft frequencies!" when the person in question has never been a licensed amateur radio operator.

3. Why a .legal group? A significant part of the traffic in rec.ham-radio is concerned with legal issues. This includes substantially all of the flamage, which has in the recent past included such subjects as whether or not it's legal to order a pizza via an amateur repeater, the proposal to add a class of license that does not require knowledge of the International Morse Code, and the legality of modifying amateur equipment to transmit outside the amateur bands. The new group is intended to move the flames and the long discussions that never seem to get anywhere out of the main group.

4. Why use the name .legal, instead of .rules, .regs, .regulations, etc.? The group is intended to contain any and all discussion about any legal issues pertaining to amateur radio. This includes not just rules and regulations of the FCC and other national regulatory bodies, but also laws affecting hams (such as the infamous New Jersey scanner law), lawsuits over nuisance issues, antenna ordinances, and the like. .legal is the best description of the intended division of existing traffic I could come up with.

5. Why not a .tech group? There are two reasons for this one. The first is that there's more to ham radio that's non-inflammatory than just technical discussions, and the object of a new group is to move the flames, not run away from them. A .tech group would leave those of us who are interested in more than just technical discussions, yet not in the seemingly endless legal discussions, left to wade through the flames. Second, Brian Kantor, who maintains the info-hams mailing list, has said that info-hams will continue to gateway rec.ham-radio (and, presumably, rec.radio.amateur[.misc]) only, and moving the technical postings off would deprive those on the mailing list.

OPEN ISSUES:
============
1. rec.radio.amateur or rec.radio.amateur.misc? Both have been proposed, and I don't have a strong preference either way. The final proposal will reflect whatever the consensus of the discussion is.

2. rec.radio.amateur.packet or rec.radio.amateur.digital? I do have
a preference here, but am willing to change my mind if a consensus is
reached that .digital is a better idea.

PLANS:
======
Assuming a consensus is reached by then, I intend to adhere to the
schedule I set originally: discussion to run through 31 December, with
the vote starting then and running through 21 January. There have been
a couple of other reorganizations in the recent past, and I'll follow
the precedent they set in regard to voting: an individual vote is
required for each proposed group. In addition, I like Kent Paul
Dolan's format for the comp.sys.amiga reorganization vote, and will
use it for this vote (though I'll put the ballot at the top of the
Call for Votes). I intend to count votes automagically with some sort
of Unix-type tool (probably awk); votes that the awk script rejects
will either be fixed if their meaning is unambiguous, or returned with
a request for clarification if not. Other than that, votes will be
acknowledged en masse about halfway through the voting period, and not
by mail. Votes will be sent to this site, and probably to my account
here. (Don't send me votes yet; I can't accept them.)

It looks like we can bring this to a successful conclusion, especiallly
if everyone maintains the same high standard of calm, reasoned discussion
that's been shown so far. Please post any discussion to news.groups as
well as rec.ham-radio, as per the guidelines.

Just curious. How widely understood is "ham" outside of the U.S.?
Outside of English speaking countries? Among non-hams in those
countries?

Thanks to Paul Korning (NI1D) and Marc Kaufman for replying, I now know that
my TNC should work, as the 80C152 uses the CCITT CRC polynomial. I say should
as I can still get the software wrong! :-)

Sorry about posting this thankyou but I cannot send mail outside the UK from
this account.

Simple.  Because the databooks I have looked at tell you how to select the
CRC the chip will do, based on the NAME, not based on the polynomial.

A quick note to those interested:
    The "Ask Mr. Protocol" column in the December 1990 (V 1 n.14) issue
of SunExpert has an above average article about amateur packet radio for those
of you looking for something to set in front of those "types of people you'd
like to see become amateurs" but are trying to get thier attention without
thrashing them about the head. The article briefly goes over "something the
hams are up to nowadays".

I'm definitely no packet gruru, but I was wondering, if your TNC receives two
bad packets (the second was a failed attempt to resend the first), you could
do some processing to make it good. Basically, do a compare between the two,
and locate where they differ (errors due to noise not likely to be identical).
And if the CRC that was received from the transmitting TNC match in both bad
packets, you could figure out how to correct the errors, and make a good
packet.

Sequence:

-receive first packet, CRC says that it is in error, so save it to a buffer.
-receive second try, this one bad too.
-compare CRCs of both packets. If they match, assume that CRCs are not
   corrupted, and proceed.
-compare both bad packets, find errors (where the compare don't match)
-try various values at the errors until the CRC is happy, or figure out what

  values would make the CRC happy.
-use new values to repair the packet.
-then you can avoid having to tell the transmitting station to try sending the
   packet again.

I would think that this might improve things in somewhat noisy environments.
Don't know how big of errors can be fixed by the above, or if you might get
fooled into thinking you corrected things when you haven't. But you wouldn't
have to change the transmitting standard, here the receiver TNC becomes a
little smarter.
---
send e-mail to WA2ISE@KD6TH on packet, as my account (and my job!) may die
soon. Also, if you know anyone looking for a person who knows HDTV, regular
NTSC TV, DSP circuit design, and high speed logic circuit design, have them
call me at 201-261-4066. Also, point any and all headhunters my way.
I have 11 patents in the TV field.

I've posted a similar message on rec.ham-radio. Having been away from amateur
radio for (embarrassingly) many years, I would like to get info on packet
switching, ham BBS and posible HAM links to internet/usenet. Please reply by
email and I can post a summary. Thanks a lot.

(Apologies if this gets posted twice; I haven't seen the first one appear,
and it's been 6 hours since I posted it...)

There has been much discussion on this subject, and what started out
as a simple call for a new group has mushroomed into a complete
reorganization of the rec.ham-radio.* hierarchy. This posting reflects
my understanding of the current consensus of opinion on the subject,
and is intended to serve as the basis for further discussion. I
gratefully acknowledge the help of many folks around the net,
especially Paul Flaherty, who suggested the original reorganization
from which this grew; he and I have discussed this posting, and it
carries his approval.

THE CURRENT PROPOSAL:
==========
The following groups are to be renamed:
rec.ham-radio   => rec.radio.amateur[.misc]
rec.ham-radio.packet => rec.radio.amateur.packet
rec.ham-radio.swap   => rec.radio.swap
Groups will be renamed by creating the replacement group, asking site
admins to alias the old group to the new one, and rmgrouping the old
group after traffic in it has died down. This method has been shown to
work in other hierarchies.

The following groups are to be created:
rec.radio.amateur.legal
This group is intended to contain any and all discussion about legal
issues pertaining to amateur radio, including, but not limited to,
rules, regulations, laws, and legal actions by and against amateur
radio operators. This group is to be unmoderated.

rec.radio.cb

This group is intended to contain discussions related to Citizens' Band radio. This group will be unmoderated.

RATIONALE:
